pair. Supervising cleaning up of yards. As foreladies in sewing rooms of relief agency.

*Assisting relief agencies, etc.*—Supplementing the existing staff as clerks, interviewers, investigators, stenographers, file clerks, and statistical clerks. Making work-relief plans as engineers, architects, and draftsmen, tabulating data on relief work being performed. Office workers lent to private organizations. Recreational leaders for boys' clubs and social centres.

*In nonprofit-making institutions.*—As nurses, orderlies, and guides in hospitals; clerical help in institutions; cataloguing, renovating, and arranging exhibits in libraries, universities, and museums; planning and overseeing repair work, as engineers; plan examining and specification writing in municipal building department, department of education and department of hospitals, as engineers, architects, and draftsmen.

The returns received at the Quebec Bureau of Mines from the operators of mines and quarries of the province show a total value of \$35,639,126 for the Mineral production during the year 1931. This figure represents a falling off of \$5,519,614, or 13.4 per cent, as compared with the year 1930, and of 23½ per cent, when compared with the all-time high record of \$46,454,820, attained in the year 1929. The mineral production in 1931 may be divided up as follows: Building materials \$17,957,466, metallic minerals \$12,184,153, non-metallics \$5,497,507. Compared with the parallel figures for 1930, a slight increase is noted for 1931 in the figures for building materials, and decreases for the two other classes.

## COMBINES INVESTIGATION ACT

### Motion Picture Prosecutions—Judgment of Mr. Justice Garrow Acquits All Accused

**A**LL parties charged as members of an alleged combine in the motion picture industry were acquitted by Mr. Justice Garrow in a judgment delivered in the Assize Court at Toronto on March 7.

The commencement of the trial on January 25 was reported in the February LABOUR GAZETTE, page 160. The investigation into the alleged combine was completed under the Combines Investigation Act in June, 1931, by Peter White, K.C., appointed as a commissioner to conduct the investigation.

In October, 1931, fifteen companies and three individuals were charged by the Crown in prosecutions conducted under the Attorney-General for Ontario. The eighteen defendants were tried before Mr. Justice Garrow without a jury on all three counts of the indictment, one count being under the Combines Investigation Act and two under section 498 of the Criminal Code. The trial occupied three weeks, concluding on February 14 when judgment was reserved. The text of the lengthy reasons for judgment, delivered on March 18, follows in part. The greater bulk of the portions omitted hereunder consists of a review of the evidence of particular witnesses.

#### THE KING V. FAMOUS PLAYERS CANADIAN CORPORATION, ET AL.

Garrow, J.:

This is a prosecution instituted at the instance of the Attorney-General of this Province under The Combines Investigation Act, R.S.C. 1927, cap. 26, and also under section 498 of The Criminal Code.

The indictment charges fifteen corporations and three individuals with the matters complained of, but as to one of the corporations, viz., Tiffany Productions of Canada, Limited, that corporate body was not served and is not proceeded against here.

The indictment contains three counts. The first count is to the following effect; that Famous Players Canadian Corporation, Limited, and all the other corporations and individuals charged, in the years 1924 to 1930 inclusive, at the City of Toronto and elsewhere in the Province of Ontario, unlawfully were parties to or privy to or knowingly assisted in the formation or operation of a combine which has operated or was likely to operate to the detriment or against the interests of the public, to wit, producers, consumers or others, and which resulted from an actual or tacit contract, agreement, arrangement or combination between themselves and with one another and with upwards of one hundred other corporations and individuals named, and which had or was designed to have the effect of preventing or lessening competition in or substantially controlling within Ontario or generally the purchase,

barter, sale or supply of positive proofs or films of moving pictures or talking films, contrary to The Combines Investigation Act.

The second count charges that the accused did unlawfully conspire, combine, agree or arrange together and with one another or with the same hundred odd corporations that were not charged, to unduly prevent or lessen competition in the purchase, barter, sale or supply of articles or commodities which may be the subjects of trade or commerce, to wit, positive proofs or films of moving pictures or talking films, contrary to the Criminal Code, section 498, subsection 1 (d).

The third count charges that the accused did unlawfully conspire, combine, agree or arrange together with one another or with the same hundred odd mentioned in the preceding count, to unduly limit the facilities for supplying or dealing in articles or commodities which may be the subject of trade or commerce, to wit, positive proofs or films of moving pictures or talking films, contrary to the Criminal Code, section 498, subsection 1 (a).

All the accused, without prejudice to the objection taken by all of them, elected to be tried by me without the intervention of a jury, and the trial thereupon proceeded in that manner.

The moving picture industry is, of course, a growth of comparatively recent years and has assumed enormous proportions and has become very highly specialized. Those concerned in the industry may be divided into the producer who makes and owns the pictures and the copyright in respect of it and of which the film is the reproduction, the distributor who is a kind of middle man engaged in selling to the theatre owner the right to produce for a limited period of time the films handled by him and obtained by him from the producers, and the exhibitor who is the owner or lessee of one or more theatres engaged in exhibiting to the public the finished picture.

Among the corporations charged, Famous Players Canadian Corporation, Limited, and B. & F. Theatres, Limited, Theatre Holding Corporation, Limited, and Premier Operating Company, Limited, are exhibitors and are the owners or lessees or otherwise interested in a large number of theatres throughout Canada, Famous Players being interested in one way or another in about two hundred theatres, although actually doing the booking for only about one hundred. All the other corporations charged except Motion Picture Distributors and Exhibitors of Canada, are distributors, and as stated are engaged in selling throughout Canada to their customers, the exhibitors, the right to exhibit to the public the various pictures handled by them. As to Motion Picture Distributors and Exhibitors of Canada, Limited, it is neither a producer, a distributor nor an exhibitor, but occupies a somewhat peculiar position and is closely in touch with the whole industry in Canada and more particularly with the exhibitors and distributors.

The individuals charged are N. L. Nathanson, who was a director and the general manager of Famous Players from 1920 to 1929; and

Samuel Bloom and Irving Samuel Fine, who began, I understand, in a small way as partners in respect of certain theatres but who increased their holdings and were subsequently incorporated as B. & F. Limited, one of the corporate bodies charged.

There are released in Canada each year some 450 feature pictures of each of which there may be from one to ten films in circulation throughout the Dominion. There are upwards of 1,100 theatres in Canada large and small, engaged in moving picture business. The pictures are almost without exception, although a few come in from England, produced in the United States, and for practically every producer there is a corresponding distributor in Canada engaged in marketing the product of that particular producer. As stated, Famous Players owns or operates or is interested in or books for a large number of theatres, undoubtedly more than any other individual exhibitor.

The trial occupied three weeks and many witnesses were examined, some at great length; and numerous exhibits were filed. The case was most ably argued and many authorities were referred to, all of which I have examined. Several points were argued of great importance, such as for instance whether either the Code or the Combines Act can be held to apply to a combine (assuming one to exist) relating to the supply of film, the contention being that the right to produce for a limited time the photographic reproduction of what is essentially a theatrical performance, and is itself a subject of copyright, is not and cannot be a dealing in any article or commodity which may be the subject of trade or commerce under the Code; and similarly since the words "otherwise...injuring trade or commerce" in section 2 (c) (vi) of the Combines Act relate back to the preceding clauses, a combine under that Act must be shewn to relate to matters which can be properly regarded as the subject of trade and commerce, and the "supply" (v) of film cannot be so regarded. As to this point I would refer to the recent judgment of Mr. Justice Raney in *The King v. Alexander et al* in which he held that "supply" might relate to anything whatever.

Many other matters were discussed to all of which I should be obliged to give very careful attention if I should find the main question of fact here involved to be established in favour of the Crown's contention. And that question, I think, so far as the Combines Act is concerned, is this: Has the evidence established that there existed during the years mentioned, between the accused, or some of them, an actual or tacit agreement entered into within this Province which had or was designed to have the effect of preventing or lessening competition in or substantially controlling within Ontario or generally the purchase, barter, sale or supply of film? If that question is answered in the negative then it is scarcely necessary to enquire whether such an agreement existed to unduly prevent or lessen competition (Count 2), or to unduly limit the facilities for supplying or dealing in film (Count 3). So also, if it is answered in the negative, it becomes unnecessary to inquire what the effect on the public was of that which the evidence disclosed, whether it was to their detriment or against their interest and who are the public to be considered.

I proceed to give the substance of the oral evidence called on behalf of the Crown. None was submitted by the accused or any of them. Among the earlier witnesses called by the Crown were Arthur Cohen, the managing director of

Famous Players, and John A. Cooper, already referred to as the President of Motion Picture Distributors and Exhibitors of Canada, and as their evidence is important it will be necessary to deal somewhat at length with what was said by each of them.

He [Cohen] also indicated that last year the attendance at their theatres in Canada was 48,000,000 persons; the preceding year it had been 55,000,000. He gave the profits earned and stated that a reduction of 5 cents per person in the price of admission would result in turning their substantial profit into a considerable loss. So that it would appear that in so far as the prices being paid by the public are concerned, not much by way of complaint can be said.

Cooper explained the operation of the Film Boards of Trade which are local managers' associations, one operating in each of the six sections into which Canada for the purpose of the industry is divided. These Boards of Trade were financially assisted from time to time by the Cooper organization. Speaking of a minute contained in Exhibit 9A, page 39, as to minimum admission fee, the witness stated that this resolution was passed really at the request of exhibitors who desired that a minimum admission fee be insisted upon and that these prices be maintained against a price cutting competition that was in operation at the time.

I now proceed to deal with the evidence of the witnesses called by the Crown in respect of certain matters which each of them spoke of, indicating from the witness's point of view how the alleged combine operated and the effect of it in regard to himself.

One general conclusion at least emerged from the mass of material, which distinguishes this case I think from any Canadian case to which I have been referred. It is obvious, I think, at any rate I have no difficulty in coming to the conclusion, that there was no attempt at price fixing as between the exchanges. On the contrary there was at all times very considerable rivalry and marked competition for business between them, with the result, so far as the general public is concerned, that no complaint whatever is made as to the price of admission charged. There have been available throughout the years in question more films supplied than there were theatres to play them in. There has never been an instance of a theatre being obliged to close its doors for want of film so far as the evidence discloses. And the rentals charged by the various exchanges to the exhibitors have been fair and reasonable, or at any rate have been arrived at solely by bargaining between the individual distributor and his customer and not as the result of any pre-arrangement among those controlling the product.

In *Weidman v. Shragge*, 46 S. C. R. 1, which was of course a civil action and not a criminal prosecution, the supply of junk in Western Canada was practically controlled by the two parties to the agreement in question, and their arrangement enabled them to stifle all competition. In *Rea v. Elliott*, (1905) 9 O. L. R. 648, the object and effect of the association in question was to restrict and confine the sale of coal by retail to its own members and to prevent anyone else from obtaining it. In *Rea v.*

*Singer et al.*, (1931) O. R. 202, it was found that facilities for supplying or dealing in plumbing and heating supplies were limited and controlled by the combine there in question, that a common price was fixed, and that prices to the public were generally enhanced. So too it was found in the case of *Rex v. Alexander (supra)*, that the object and effect of the arrangement between the defendants as to tenders was to limit and prevent competition and to practically dictate to the owner and without his knowledge who was to do the work for him for which tenders were called and at what prices. But the facts in all those cases were quite different from the present.

The substance of Mr. Greer's very able argument is found in the first particulars filed. Shortly, the position taken by him is this. He does not say that the individual distributors charged were not trying to sell film, nor does he contend that all group buying such as was done by Famous Players for its hundred and more theatres is contrary to the criminal law, but he contends that Famous Players through its control of so many theatres was able to create and did create an unfair situation favourable to itself and disadvantageous to all others, in imposing terms as to protection unfair to its rivals in that those terms prevented them from getting film as soon as they otherwise might; in getting better terms by purchasing on open account whereas the independents usually, so it is contended, were obliged to pay C.O.D.; further that the only class "B" members of the Motion Picture Distributors and Exhibitors association were connected with Famous Players, and it is suggested that body was to a great extent controlled by it and hence, as I understand it, that the Standard Form of Contract in all three forms which it took in different years was really the result of a scheme on the part of all the accused to impose upon the exhibitor onerous terms as to arbitration and other matters and so make it difficult for him to carry on, cause him to fail in the performance of his contracts, become involved in arbitration, be required to furnish security not only by his immediate creditor but by all others with whom he had contracts, and ultimately become discouraged and leave the field to Famous Players and its associates.

That in a very few words is the substance of the contention, and the genesis of the argument is, I think, to be found in some decisions of United States courts much relied upon by the Crown, in which the Standard Contract and the Arbitration Clauses and Credit Rules, etc., as they are known in the United States, and they are practically the same as those in use here, were very fully discussed. These authorities are *Paramount v. United States*, 51 S.C. Reporter (1930) 42; *United States v. National Pictures*, *ibid.*, p. 45; and *Majestic v. United States*, Fed. Rep., 2nd Series, vol. 43, p. 991. These authorities are not binding upon me of course, but I have read them carefully since they are the only decisions referred to in the argument relating to the moving picture industry. They were all, I think, decisions under the Sherman Anti-Trust Law and for that reason I think are quite distinguishable from the present case. Lord Parker said in *Attorney-General for Australia v. Adelaide Steamship Co.*, 1913 A.C., at p. 801:

"The Sherman Act construed strictly makes every contract or combination in restraint of trade and every monopoly or at-

tempt to monopolize a statutory misdemeanor irrespective of any sinister intention on the part of the accused and irrespective of any detriment to the public."

Our statute is broad enough in its terms, I refer to the Combines Act, but an essential requirement as to all combines within the Act is that they operate or tend to operate to the detriment of the public, whether consumers, producers or others.

Having read these cases with care, as already stated, I am of the opinion that the facts in each of them, as apparently established by the evidence, go further than the facts in this case, and that in any event, as already indicated, they are decisions under a statute fundamentally different from our own statute, and therefore are not safe guides to be followed by me in disposing of the questions involved in this prosecution, and that the attempt made in the present case to have the Court go the length that these decisions go would not be justified by any Canadian or English decision that I am aware of.

But what is the foundation in fact for the contention made by counsel for the Crown. There is nothing to indicate that Famous Players were or are responsible for the existence of the Cooper organization, or that they dominated or controlled its operations.

And the very fact that these various contracts did differ in detail indicates wherein the argument of the Crown fails. The important terms as to price, play dates, protection, etc., were left to individual bargaining between the parties, and were never arrived at as the result of arrangement between the distributors themselves; or if they were I have not been able to find the evidence of it.

Undoubtedly Famous Players were striving to get greater protection, and towards the end of the years here in question their demands became so excessive that the distributors rebelled, appointed a committee to deal with the subject and passed a resolution indicating the limit to which they were prepared to go. Beyond doubt the tone of some of the demands made by B. & F. as well as by Famous Players was quite dictatorial, so much so, that one general manager of a distributor was moved to reply with sarcasm that his head office would be glad to know that they were to be saved the expense of maintaining an office in Toronto since it appeared that the terms upon which they were to do business in the future were apparently to be fixed by their customers. But these demands, as I say, were never acceded to and I have to do only with the situation as it existed during the years named in the indictment.

I find as a fact that protection in itself is conceded to be and is a proper enough arrangement. Undoubtedly there are individual cases in which it may have seemed to work a hardship. But I am quite unable to find that the accused or any of them combined together to grant to Famous Players or their associates such a degree of "protection" as worked to the detriment of the independents as a whole by controlling or limiting the supply of film.

Again, it is said, as already intimated, that the Arbitration Clauses of the Standard Contract and the Rules as to arbitrations were harsh and unfair in their operation. Assuming that, they were agreed to by everyone in the business, including Famous Players, and the form of contract was not adopted until after

full discussion with every one concerned. There is no instance either of any exhibitor being informed that unless he signed this form of contract he would get no pictures. Much criticism is levelled at the provisions as to security which have now, wisely perhaps, been dropped from the standard contract. But that they were ever inserted for the purpose of putting independent theatre owners out of business or unduly hampering them, or, as was suggested, with the hope and expectation that they would fail in their contracts and so become subject to arbitration, I do not believe. Not only is the evidence lacking to support such a suggestion, but as I have already said, it would be entirely against the financial interest of the distributor that that should occur. . . .

As to the activities of Bloom and Fine and their threats and promises of various kinds. Assuming, although much of it was contradicted, that they actually said all they were charged with saying as to their intention to build theatres in opposition to independents, as to their warnings to the effect that their rivals would find it difficult to secure film if they proceeded with proposed building of theatres and that sort of thing, it was I presume within the right of Bloom and Fine to erect, to buy or lease theatres wherever they could secure them. They did not in fact do so in any of the cases where these threats were made, but in any case "a threat to do an action which is lawful cannot in my opinion create a cause of action whether the act threatened is to be done by many or by one" (Lord Buckmaster in *Sorrell v. Smith*, 1925 A. C. 700. See also *Hay v. Local Union*, (1928) 63 O. L. R. 418). Nor would such a threat involve any criminal liability. At any rate such conduct while it indicates that these parties were willing to go a considerable length in frightening rivals from the field, does not help me to the conclusion that they and their associates had combined together to limit and control the supply of film. And undoubtedly the more theatres there are, the smaller the supply of pictures for each.

. . . One does not in a case of this kind look for the terms of the combine or conspiracy to be set out in black and white in the minutes of the companies involved or contained in so many words in some document or series of documents. It is not at all necessary that the parties shall all actually have put their heads together, nor indeed that they shall ever have met together and formally agreed, but it is essential that one is able to gather from all the evidence that the combine or conspiracy alleged did in fact exist between at least some two or more of the accused; that there was a common design or plan to do the thing forbidden by the statute, not resting in intention merely, but reduced to a common undertaking to carry that intention into effect (*Mulcahy v. Regina*, 1868 L. R. 2 H.L. at p. 317). And see the judgment of Mr. Justice Wright in *Re v. Singer* and of Mr. Justice Raney in *Re v. Alexander*, as to the meaning of the word "combine" as contained in the Combines Investigation Act.

I have not been able to gather from the material before me that the existence of such a combination between the parties has been made out. Some of the accused, such as Columbia for instance, had very little apparent connection with any of the matters charged. . . . There is much to criticize, perhaps, in the method of some of the other accused, particularly Bloom

and Fine, who scarcely succeed in concealing their identity behind their initials "B. & F."; but, remembering that this is a criminal prosecution and not a civil proceeding, I find myself quite unable to arrive at the conclusion that the Crown has discharged the burden which rests upon it, and consequently the prosecution fails as to all the accused and upon all three counts of the indictment.

### Appeal against Conviction of Members of Electrical Contractors' Combine

The members of the Electrical Estimators' Association, an alleged combine of Toronto electrical contractors, on February 9 filed notice of application for leave to appeal against the judgment of Mr. Justice Raney in *The King v. Harry Alexander, Limited, et al*, reported in the February LABOUR GAZETTE, pages 156-158, by which they were convicted and sentenced for offences under the Combines Investigation Act and Section 498 of the Criminal Code.

### Increase in Urban Population of Canada

A bulletin recently issued by the Dominion Bureau of Statistics on the constitution of the population of Canada in respect to its urban and rural elements, as shown by the 1931 census, indicates the further progress of "urbanization" during the past ten years. In the ten years 1921 to 1931 the population of Canada increased from 8,787,949 to 10,374,196, an increase of 1,586,247 or 18.05 per cent in the decade. During the same period the percentage of gain in continental United States was 16.7 per cent and in England and Wales somewhat less than 6 per cent.

At the 1921 census the rural population was more than 50 per cent of the total population, whereas in 1931 it represented only 46.29 per cent. The urban population (cities, towns and incorporated villages) increased by 1,219,936, or 28 per cent; while rural population showed a ten-year increase of only 366,311, or 7.6 per cent. The distribution of the population of Canada and of each province as between rural and urban districts in 1931 is shown in the following percentages:—

	Rural	Urban
Canada. . . . .	46.29	53.71
Prince Edward Island. . . . .	76.85	23.15
Nova Scotia. . . . .	54.83	45.17
New Brunswick. . . . .	68.41	31.59
Quebec. . . . .	36.90	63.10
Ontario. . . . .	38.92	61.08
Manitoba. . . . .	54.87	45.13
Saskatchewan. . . . .	68.44	31.56
Alberta. . . . .	61.93	38.07
British Columbia. . . . .	43.14	56.86
Yukon. . . . .	67.85	32.15
Northwest Territories . . . . .	100.00	—

## REPORT OF THE DEPARTMENT OF PENSIONS AND NATIONAL HEALTH FOR THE FISCAL YEAR 1930-31

THE annual report of the Department of Pensions and National Health for the fiscal year 1930-31 reviews the activities of the Department under six main sections, dealing respectively with the work of the Pensions Division, the War Veterans' Allowance Committee, the Board of Pension Commissioners for Canada, the Pension Tribunal, the Pension Appeal Court, and finally the Health Division. Operations on behalf of ex-service men are under the first five of these sections, while the National Health Division deals with the work of the Child Welfare Branch, matters of public health, etc.

The admissions of army pensioners to hospital during the fiscal year showed a marked increase, the number being 12,077, as against 9,941 in 1929-30. The total number who received in-patient treatment was 15,519 as against 12,939 in 1929-30 and 12,147 in 1928-29. Treatments under the out-patient department increased from 122,651 to 161,816. Of the number actually in hospital on March 31, 1931, 1,875 were in departmental hospitals, while 1,252 were in civil institutions, making a total of 3,127, as against 3,403 in the year previous. The number of veterans' care cases showed a decrease of twelve, the total at the end of the fiscal year being 171.

*Employment and Relief.*—The work of assisting in securing employment for disabled ex-service men was under the direction of the Employment Service of Canada and the Montreal Rehabilitation Committee. The total number of applicants for employment during the year was 18,201. Of this number there were 8,846 placements, 5,679 cancellations, and 3,676 pending placements. The comparative figures for the year previous showed 17,524 applicants, 10,146 placements, 4,803 cancellations and 2,775 pending placements.

The department continues to operate vetcraft factories at Halifax, Montreal, Toronto, Hamilton, and Vancouver. One is operated at Victoria by the Canadian Red Cross Society under an agreement with the department. The Winnipeg factory was totally destroyed by fire on June 12, 1930, and has not been re-opened. During the year under review 130 new cases were admitted and 181 discharged and on March 31, 1931, 240 men were on the strength of these factories. The manufacture of poppies and wreaths which are distributed on Armistice Day is undertaken in these factories and affords employment to quite a few men who would have little or no work value in other occupations.

On March 31, 1931, there were four men undergoing vocational training, while on strength was one industrial problem case receiving probational training.

The number of pensioners who were granted relief in the form of orders for food, rent, fuel, etc., in 1930-31, was 8,811. This relief was given 96,154 times on an average of 10.91 times per man, while the value of relief orders totalled \$907,010.43. The total number of pensioners as at March 31, 1931, was 66,669, of which number 57,065 were in Canada and 9,604 outside of Canada. The increase in the total number of pensioners as compared with the previous year was 9,673. The total number of beneficiaries under the Pension Act as at March 31, 1931 was 230,744, representing an increase of 27,902 over the previous fiscal year, and the total liability under the Act for the fiscal year 1930-31, was \$40,211,726 representing an increase of \$2,409,216 when compared with 1929-30.

Under the War Veterans Allowance Act of 1930, which is administered by a committee of three members, provision is made for a living allowance for the aged or permanently disabled pensioner whose condition is only partially pensionable, and for the aged or permanently disabled veteran not eligible for pension provided that he saw service in a theatre of actual war, when such pensioner or veteran is in necessitous circumstances.

It was estimated by the department at the time this legislation was under consideration that the number of recipients would be 3,176 and the annual cost \$1,333,000 during the first year of operation. On September 1, 1931, when the legislation had been operating for one year, the number of those receiving the allowance was 3,049, representing an annual expenditure of \$990,084.

There was a further decrease in the number of applications for returned soldiers' insurance, the number being 1,563, as against 3,580 during the previous fiscal year. One hundred and sixteen applications were refused for various reasons. There was a slight increase in the number of surrenders. The number of policies in force on March 31, 1931, was 29,013, a decrease during the year of 100. The amount of insurance carried was \$64,314,952.

*Workmen's Compensation in Respect of Pensioners.*—Under Order in Council P.C. 558, 1928 (LABOUR GAZETTE, December, 1928, page 1333) the Dominion Government assumes workmen's compensation liability for pensioners of 25 per cent disability rating and upwards who are suffering injury or disease as

a result of an industrial accident. This provision with certain amendments was renewed by Order in Council P.C. 645, 1929, for a period of two years as from April 1, 1929.

Commenting on this enactment, the report observes that "the provision under which the department assumes responsibility in respect of accidents sustained by pensioners of 25 per cent and upwards while engaged in industry, continues to be of benefit to these men as otherwise they would, in many cases, be excluded from employment." The expenditure is largely governed by the number of fatal accidents. During the fiscal year under review, the number of claims made was 192, which is 17 less than the previous year. The expenditure was \$45,142, as compared with \$35,727 in 1929-30.

*National Health Division.*—In this section of the Department are grouped the various agencies operating for the public welfare, particularly in the matter of health.

The food and drug division again maintained its policy of paying special attention to food purity in standard articles and the truthful labelling of products, while the Narcotic Drug division continued its successful efforts to curb illegal traffic in drugs. In both these sections the report revealed ample evidence of the vigilant and exacting nature of the work.

The quarantine service and the immigration medical service, maintained their efficiency, the former in the prevention of quarantinable diseases, and the latter in enforcing the provisions of Section 3 of the Immigration Act with respect to "prohibited classes."

The division of public health engineering maintained control over water supplies for drinking and culinary purposes on vessels, railway trains and other common carriers in international and inter-provincial traffic. Another important part of the work of this division consisted of the inspections made into sanitary conditions on branch lines of railway and other public works under construction and subject to supervision as provided under the Public Works Health Act.

*Marine Hospitals Service.*—In accordance with Part V of the Canada Shipping Act, the chief purpose of this service is to provide medical and surgical attendance to sick and injured mariners belonging to vessels that call at Canadian ports from foreign parts and to protect these ports from being saddled with the expenditure incurred. This is done by collecting dues from every vessel, subject to certain exceptions, at the rate of two cents per ton of registered tonnage not oftener than three times a year.

Sick mariners belonging to vessels that have paid these dues for the current calendar year are entitled to gratuitous treatment provided they are sent to a designated doctor or hospital with a written recommendation from the master of the vessel, endorsed as approved by the collector of customs.

Sick mariners' dues were collected from 3,056 vessels. The number of seamen employed on these vessels was 93,557; 5,871 of these required treatment during the fiscal year, 974 received out-patient treatments at the various hospitals and 2,744 were admitted as ward patients. The number of out-patient treatments was 2,852 and the number of hospital days was 55,275.

A considerable section of the report is devoted to the successful work in the direction of child and maternal welfare and health education. In this respect the activities of various voluntary organizations are reviewed as well as the progress of child welfare in other countries.

The British Minister of Labour stated in the House of Commons on February 2 that the gap between the income and the expenditure of the Unemployment Insurance Fund had been reduced from over £1,000,000 a week in September 1931 to an average of about £250,000 a week during December and January. The saving is partly accounted for by a lessening of the amount of unemployment, reduced rates of benefit, and an increase of £200,000 a week in contributions, and it varies from week to week according to the volume of unemployment. The saving is also partly accounted for by the application of the means test to those claiming transitional benefit. It appears from a statement made by the Minister in the House of Commons on the same day that 1,629,009 applications, or renewals of applications, for transitional payment had been examined, with the result that one-half had been granted relief at normal benefit rates, about one-third had been accorded some relief, and about one-sixth had been judged not to need relief at all. The Minister further stated that the saving originally estimated to result from this change, namely, about £10,000,000 a year, would probably be realized.

An anti-injunction bill was passed early in March by the United States Senate and House of Representatives. This measure limits the power of the federal courts to issue injunctions against labour unions in their disputes with employers, and safeguards newspapers against indiscriminate prosecution on charges of contempt of court resulting from criticisms of judges.

## GOVERNMENT EMPLOYEES' COMPENSATION ACT

### Report of Administration throughout Canada during 1930-31

**I**NCLUDED in the last report of the Department of Railways and Canals is a review of the administration of the Government Employees Compensation Act during the fiscal year ending March 31, 1931. This legislation is under the administration of the Department of Railways and Canals because the Canadian National Railways have the largest number of employees within the scope of the Act. The provisions of the Act, which was adopted in 1918, are as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority, as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

The report points out that prior to January 1, 1931, employees' compensation payments to employees of the Canadian Government Railways were made directly out the Consolidated Revenue Fund. This procedure, a continuance of the practice adopted when the application of the Compensation Act first became effective in 1919, was discontinued, and as such payments thereafter are directly absorbed in the operating expenses of the Canadian Government Railways, the cumbersome adjustments previously necessary to obtain proper accounting now disappear, and several other practical advantages accrue. The departmental audit of such disbursements is, however, maintained to comply with the Act.

During the fiscal year ended March 31, 1931, Dominion expenditure under the Act totalled \$436,501 as compared with \$429,098.19 for the previous year. Since the Act became effective in 1919, the total amount of payments up to March 31, 1931, was \$3,656,176.

The total number of claims on which payments were made during the fiscal year 1930-31, was 3,647, of which 1,780 were for compensation and medical aid; 1,365 were for medical aid only; and 502 were for pensions.

A recapitulation of claims and disbursements by departments indicates that during nine months of the fiscal year claims from employees of Canadian Government Railways totalled 1,773 with disbursements totalling \$192,453.37. There were 702 claims resulting from canal operations, the disbursements of which amounted to \$45,324.57. Other departments having a large number of claims and disbursements totals were as follows:—

Public Works—249 claims, involving \$37,455.76.

Marine—218 claims, involving \$16,500.09.

Hudson Bay Railway—159 claims, involving \$15,727.79.

Hudson Bay Terminals—36 claims, involving \$10,590.57.

Interior—173 claims, involving \$14,805.49.

National Defence—72 claims, involving \$9,206.33.

Post Office—147 claims, involving \$7,774.50.

The accompanying table indicates the payments under the Act, since its inception to March 31, 1931, by provinces. It may be noted that, in Saskatchewan, the Act which established a Workmen's Compensation Board became effective in July, 1930, during the period covered by the report, while in Quebec the new Act establishing a Board or Commission became effective only on September 1, 1931.

## WORKMEN'S COMPENSATION IN ONTARIO

### Report by Mr. Justice Middleton, Commissioner investigating the Working of the Act

**I**N the last issue of the *LABOUR GAZETTE* (page 250) note was made of the report by Mr. Justice Middleton, who had been appointed by the Ontario Government early last year as a commissioner, under the provisions of the Public Inquiries Act, to inquire into the subject of workmen's compensation in the province, and to make recommendations as to the advisability of making amendments to the Workmen's Compensation Act. A fuller outline of the Commissioner's report may now be given.

Mr. Justice Middleton points out that in its main lines the Act of 1914 has worked well and has given complete satisfaction to all those concerned. "To the workmen it has brought compensation without the burden of establishing negligence. The employer has been relieved from the uncertainty arising from litigation and has had substituted for it a fixed payment which he can regard as part of his overhead expense. He has the further satisfaction of knowing that practically all the money paid by the employers reaches the hands of the workmen injured." The workman's appreciation of the Act was indicated by the "cordial endorsement" given to it by their representative who appeared before the Commissioner, while on the part of the employers there was "no suggestion looking to the reversion to the former system or to any departure from the scheme of workmen's compensation."

#### General Lines of the Act

The report outlines the general principles underlying the Act as follows:—

"The Workmen's Compensation Act was passed in the year 1914, and came into operation in the year 1915. The Act was passed after very careful investigation of the entire situation by the late the Honourable Sir William Meredith as Commissioner. The intention was to substitute for the individual liability of the employers at common law, and under various statutes modifying it, a scheme of compensation to workmen who might suffer injury in the carrying on of industrial occupations. The Act called for the establishment of a fund, to which all employers were compelled to contribute, to be administered by a Board appointed by the Government. The great bulk of the employers falling under what has been called "schedule 1," contributed to a collective fund, out of which compensa-

tion to any of their employees should be made, the amount of the contribution to the fund in each case being determined by the Board. The Board was empowered to divide the industries throughout the Province into classes, and to determine the amount to be contributed by each class and by each member of the class. The amounts payable depend upon the number of employees in each case, the wages paid and the experience of the Board as to the amount of compensation necessary to be paid. There is provision in the Act allowing the Board to increase the amount payable by the employers as a class or as individuals where experience indicates this is the proper course to adopt, and there is also power to reduce the amount payable where experience justifies it, a scheme of merit or demerit rating being contemplated.

"Certain large industries, mainly the railways, the Bell Telephone Company and certain shipping industries are placed under "Schedule 2" of the Act, these having been deemed large enough to justify treating each industry separately. As to these there is no collective liability, but each industry is made liable for the accidents occurring in its operations. In the case of compensation payable either collectively or individually over a number of years an amount estimated as adequate to meet the total liability is immediately payable. Each year is thus made responsible for the total liability for accidents occurring in that year."

#### Labour Proposal for Increased Compensation

Twelve main requests for amending legislation were submitted by organized labour, and of these five proposed increases in compensation. These were as follows: (1) that the basis of the maximum wage for the purpose of compensation should be increased from \$2,000 to \$2,500; (2) that the amount payable for funeral expenses and by way of monthly payments to the widow and dependants, be increased; (3) increase in the proportion of wages payable from 66⅔ per cent to 75 per cent in the case of permanent total disability and also (4) in cases of permanent partial disability; (5) that the minimum payment in respect of total disability, either permanent or temporary, should be \$15 in place of \$12.50

The National Labour Council also recommended that where the amount payable is

less than \$25 per week, the full amount of wages should be paid.

Mr. Justice Middleton, in his report, estimates the additional expenditure that would be required to effect the foregoing labour proposals. "For the purpose," he says, "of meeting the increased liability suggested by the Trades and Labour Congress in respect of accidents that have already taken place, it would be necessary to raise at once the sum of between six and seven million dollars, and that in the future the annual increase would not be much less than a million and a half dollars with a still further annual increase of a million and a quarter if the suggestion of the National Labour Council should be accepted. After very carefully considering these requests I have come to the conclusion that for the following reasons none of them should be granted.

"First: The present condition of industry is such that it is impossible to contemplate casting any such burden upon it as that proposed. It would mean disaster.

"Second: Even if it be assumed that the present condition of industry is the result of financial depression and that before long it will recover, no such burden should be imposed. At the present time the allowances under the Ontario Act are the highest paid anywhere. In comparatively few places are the allowances as large as in this province. Our industries have to compete in the world market and to impose upon them a greater burden than that borne by industries elsewhere is to handicap them so as to make success impossible. This would operate as much to the detriment of the workman as of the employer.

"Third: The whole scheme of the Act and the principle underlying it is in the nature of insurance. The workman contributes nothing to this scheme save that which he unknowingly contributes as a member of the public and by his failure to secure complete indemnity. It was because of his contribution as a member of the public that by the original Act he was given fifty-five per cent of his wages instead of fifty per cent as originally suggested. When the increase was made from fifty-five per cent to sixty-six and two-thirds per cent the burden upon industry was very substantially increased, and I do not think that any circumstances now existing or likely to exist in the near future would justify any further increase. The actual amount secured to the individual workman is greater than at first sight appears as in addition to the 66½ per cent of wages

the industry pays medical expenses. In 1929 these amounted to \$1,385,524 and in 1930 to \$1,336,046.

"Fourth: The increase suggested with reference to accidents that already have happened would be a complete departure from the scheme of the Act, which is that the industry as it existed at the date of the accident should bear the entire financial burden resulting from the accident. The increase, if granted would cast upon the industries of to-day a substantial share of the financial burden resulting from accidents in past years. How great this would be can be appreciated by comparing the amount necessary to be raised in the first year, over \$6,000,000, with the total reserve now on hand with the Board to meet future payments, somewhat over \$26,000,000."

### Social Expenditures in Ontario

"I think I shall not be going beyond the scope of my investigation," Judge Middleton continued, "if I draw attention to the enormous amount of money spent by this province in the carrying out of schemes of social betterment. I refer to the figures given in the pre-sessional statement of the Provincial Treasurer in the *Ontario Gazette* before the session of 1931. It is there said:

Ontario stands admittedly in the forefront of the Provinces in regard to social legislation. Such legislation, placed on the Statute Books with the purpose of improving the conditions under which our people live, extending equal opportunities to all, and ameliorating the conditions of the under privileged and mentally deficient, involves the expenditure of large sums of money. Such expenditures, from the very nature and aim of the services rendered, must necessarily expand from year to year, and result in benefits far in excess of the actual money involved. A summary of the gross expenditure of the above nature during the year is enlightening:

Bonus to rural power lines. . . . .	\$ 1,689,000
Education. . . . .	11,774,000
Prevention of disease and public health education. . . . .	880,000
Public institutions, hospitals and charities. . . . .	8,025,000
Children's aid and protection. . . . .	288,000
Old age pensions. . . . .	6,572,000
Mothers' allowances. . . . .	2,369,000

These make a total of . . . . . \$31,597,000

"This statement later on shows that the total ordinary expenditure of the Province amounted to almost \$58,000,000. Of this almost \$12,000,000 were public debt charges, leaving for expenditure, other than payment of debt and interest on debt, \$46,000,000. Of this \$31,500,000 was spent on what is described as social legislation. But this is by no means all that was spent for these laudable purposes. The benefits awarded through the Workmen's Compensation

Board amounting to \$8,000,000 is not included, nor is there included the very large sum spent by municipalities for similar purposes. If there be added to this provincial statement the amount spent by municipalities for the purposes of education, hospitals, public charities and other like causes the total may well be regarded as appalling. It must be remembered that while the Province of Ontario has a population of a little over 3,000,000 a very large proportion of these are not wage earners or in receipt of any income, and that the burden of taxation falls upon a comparatively small proportion, probably less than ten per cent of the whole.

"No right-thinking person would begrudge the expenditure of this money; the causes are all worthy, but extreme care must be taken to see that a situation is not created in which the burden imposed upon the earner will be greater than he is able to bear. I very much doubt whether in any community save the Soviet States social legislation has been carried any further than in this Province. It would be disastrous if we should be compelled to recede from the advanced position that has been taken."

### Various Proposals Considered

The Commissioner then proceeds in his report to deal with the various questions that had been submitted. His findings are briefly outlined in the following paragraphs:—

**Inclusion of All Employees.**—The Commissioner discusses the exclusion of certain workmen from the Act, including those in industries which employ less than a stated number of workmen, the Board having by regulation fixed this number at six in some cases and four in others. "It is admitted," he says, "that it is not practicable or desirable to attempt to bring domestic and farm workers under the Statute. He points out certain difficulties which arise in industries in Part II of the Act, affecting both the employer and the workman. The rights of the employer under Common Law are modified by Part II, which imposes on him a liability for accidents caused by defective plant, and deprives him of certain common law defences, such as voluntary assumption of risk by the workman or negligence of a fellow servant; while on the other hand the workman in a small industry under Part II often suffers by the inability of his employer to meet his liability for compensation.

"The remedy for this situation is not easy to find," the Commissioner states: "any attempt to bring in all the excluded industries under the operation of the Act would

impose a tremendous burden on the Board and would be impracticable; the expense of administration would be disproportionate to any benefit that would result." However, he continues, "if those interested in the workmen would, as an organized body, apply to the Board to modify the regulations made under the Act so as to bring further individual industries under the Act, I am sure the Board would grant a sympathetic hearing."

The commissioner's attention had been called to the risks incurred by the workmen in lumbering operations, and by engineers in heating plants, chefs, cooks and waiters, and employees in cheese factories, dairies and garages. He suggests that the Board might well consider the necessity of amending the regulations in respect to these occupations.

**Contract System in Lumbering.**—It was suggested at the hearing that workmen employed under the system of contracting and sub-contracting in these operations were not adequately protected, the industry employing no workman directly. No practical method, the Commissioner states, of enabling these men to participate in the benefit of compensation had been suggested.

**Serious and Wilful Misconduct.**—The labour representatives had proposed the abolition of the provision in the Act depriving a workman of his right to compensation, where the accident might be attributable to serious and wilful misconduct. On this request the Commissioner states: "Where serious and wilful misconduct is found and the result is neither death nor serious disablement there should not, in my opinion, be compensation. The statute has gone a very long way in imposing a liability upon the industry where the liability arises from serious and wilful misconduct on the part of the workman in cases resulting in death or serious disablement. This may be justified upon grounds of public policy, but I think it would be against all public policy to impose a liability for a minor injury resulting solely from the workmen's serious and wilful misconduct."

**The Waiting Period.**—At present the waiting period is seven days. The Commissioner recommends an amendment to the statute reducing the period to three days with no dating back. "Compensation would thus become operative on the fourth day after the accident, and for minor injuries not disabling the workman for three days no compensation will be payable. It was suggested that this should be three working days, but this does not commend itself to me as the delay is to permit recovery from minor injuries."

*Abolition of Schedule 2.*—The Commissioner recommends no change in the Act in this respect, there being no indication that in cases falling under Schedule 2 the injured man fails to receive all that he is legally and justly entitled to have. He suggests that the workmen's complaint in the matter is largely psychological, and results from the particular nature of his claim as against an individual company, as contrasted with the claims that are made, as in Schedule 1 industries, against an impersonal fund.

*Deducting Compensation from Wages.*—It was alleged that the provision in the Act forbidding this practice had been violated, but the allegation was denied. Whether it had been violated or not, the Commissioner considered that the section was adequate as it stood.

*A Board of Review.*—Ninety-seven of the cases coming before the Board are satisfactorily adjusted, and about 3 per cent constitute "problem cases." Two-thirds of these are said to be dealt with finally, leaving only about one per cent in which there is dissatisfaction. The Commissioner points out that the purpose of the Act was to abolish tedious court proceedings, and states that "there is almost unanimous agreement on the part of all concerned that the introduction of any right of appeal would be disastrous. I am satisfied that the workmen should be the last to complain of the existing condition."

Notwithstanding the few cases in which there had been dissatisfaction the Commissioner was therefore unable to recommend the setting up of an appellate tribunal or Board of Review.

*Unemployment Subsequent to an Accident.*—The Commissioner refers to the provisions made in the Act for the compensation of the various classes of disability. As to proposals that further provisions in regard to unemployment should be included, he states his opinion as follows:—

"What is sought is to impose upon the industry the burden of unemployment insurance. There is, in one aspect, some fairness in the case made for the injured workman. It is difficult for him to obtain another position, but too frequently this condition is produced or accentuated by general industrial conditions and it seems inequitable to place any burden of unemployment insurance upon the industries concerned under the guise of workmen's compensation. If there is to be unemployment insurance it should be under the provisions of some general scheme in which the burden would be otherwise cared for."

*Repairs to Artificial Limbs.*—A suggestion was submitted for the elimination of the existing time limit for the provision of medical and surgical aid, but the Commissioner was opposed to placing such an indefinite liability upon industry as would result from the removal of the time limit.

*Industrial Diseases.*—The Commissioner advises that great care should be taken to avoid including among industrial diseases those that might overtake any individual, or those that are merely the result of advancing years; for example, rheumatism, heart disease and hernia might better be provided for under a health insurance or pension system, and should not be made a charge against industry. However, he recommends the addition to Schedule 3 of the following diseases, as being definitely industrial in their origin: (1) Infected blisters; (2) Cancer arising from the manufacture of pitch and tar; (3) Dermatitis; (4) Bursitis.

*Medical Practitioners.*—No addition to the Act which would recognize osteopaths, drugless healers or Christian Scientists as "medical practitioners" is recommended in the report. Dentists should be classed as medical practitioners in cases requiring dental treatment.

*Medical Member of Board.*—The Commissioner considered that it would be inadvisable to hamper the government in filling appointments to the Board by requiring that one of its members should be a physician or surgeon. The Board, he pointed out, has competent medical advisers on whom it can rely.

*Patient's Choice of Physician.*—This proposal is not approved, the Commissioner considering that such a change in the Act would result in lack of uniformity, that physicians chosen by the patient would be unduly sympathetic and that the fund would not be protected.

*Hospital Claims.*—The Commissioner suggests an amendment by which a hospital would be enabled to send in to the Board a claim for treatment of a patient, where the latter has failed to pay, the Board to retain the amount out of compensation payments until the claim is adjusted.

*Merit-Rating.*—The report points out that the Board has power to increase the assessments levied on employers with a bad accident record, and also to lower the rates for employers with good records; but he suggests that the latter power should be more definitely conferred than it is in Section 96 (3). However, the Commissioner points out that great care would have to be taken in the application of any such merit-rating system, because the whole principle of collective liability is based upon the doctrine of average.

*Protection against Actions.*—The Commissioner rejects a proposal that employers in schedule 2 be placed in the same position as those in Schedule 1 in regard to the loss by workmen of the right of action under certain circumstances. He points out that the section of the Act dealing with this subject substitutes a class liability for individual liability, and for this reason it could not be made to apply to employers under Schedule 2, who are individually liable.

*Illegal Employment of Minors.*—The report recommends that, where an accident directly results from the illegal employment of a

minor, the Board should be enabled to collect the whole compensation from the employer who has violated the law.

The Commissioner concludes by paying a tribute to the Workmen's Compensation Board: "The Province and all those concerned with the operation of this Act," he says, "are to be congratulated on the efficiency of the Board as it has been from time to time constituted. It is no small thing to have administered the affairs of a fund such as this and adjusted the innumerable claims presented to the satisfaction of substantially all parties concerned."

### Provisional Assessment Rates for Workmen's Compensation in Ontario, 1932

The Workmen's Compensation Board of Ontario recently published a pamphlet giving the provisional rates of assessment to be charged against industries in 1932 together with the adjusted rates for 1931. For assessment and compensation purposes under the Act, the industries covered are divided into 24 classes. Each class stands upon its own footing and carries its own burden except that a very small fund known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class. With the exception of this fund the moneys collected are just what are considered necessary to take care of the accidents that have actually happened. At the beginning of the year each employer is required to furnish the Board with an estimate of the probable payroll for the year and he is assessed provisionally upon that estimate. At the end of the year the assessment is adjusted when the actual amount of the payroll is ascertained; the rate provisionally fixed is also altered where the accident experience shows it to be necessary.

The principal changes, all representing increases, in the provisional rates of assessment per \$100 of payroll, for 1932, as compared with the adjusted rates for 1931, are as follows:—

Nickel or nickel-copper mining assessment increased..	from \$3.50 to \$4.00
Rolling mills or steel works with blast furnace..	from .50 to .75
Iron smelting with blast furnace..	from 1.00 to 1.25
Boots, shoes and gloves, other than rubber, mfg..	from .15 to .20
Felt boots or shoes, manufacturing, with felt manufacturing..	from .25 to .30
Safe moving or moving of boilers, heavy machinery building stone, or the like..	from 3.00 to 5.00
Teaming, trucking or cartage n.o.s..	from 2.00 to 3.00
Warehousing or storage with teaming or cartage..	from 2.00 to 2.50
Warehousing or storage without teaming or cartage..	from 1.00 to 1.50

There were 3,836 accidents reported to the Ontario Workmen's Compensation Board during the month of March, as compared with 4,023 during February, and 4,523 during March a year ago. The fatal accidents numbered 18, as against 29 in March last year. The total benefits awarded amounted to \$501,965.02, of which \$429,880.04 was for compensation and \$72,084.98 for medical aid. The accidents reported for the first quarter of 1932 numbered 11,460, as compared with 12,683 for the same period last year. The total benefits awarded during the first quarter of 1932 were \$1,359,526.96, as compared with \$1,646,188.71 during the same period a year ago.

### Resolutions Adopted by Alberta Legislature

During the recent session the Alberta legislature unanimously adopted the following resolutions:—

#### Unemployment Insurance

"Whereas unemployment has assumed the proportions of a national calamity, and it has become abundantly clear during the past

few months that the present schemes of relief work and direct relief are uneconomical and entirely inadequate to meet the needs of the situation; and whereas the Federal Government by its participation in relief measures has accepted partial responsibility in caring for those who are suffering from the result of unemployment; and whereas the present

methods of apportioning the costs of relief are placing an unduly heavy financial burden on the municipalities and provinces, resulting in the creation of serious financial difficulties to those authorities, and believing that this should be mainly a Federal responsibility; therefore be it **RESOLVED**, That this Assembly, being of the opinion that the results of unemployment can only be properly and adequately provided for by a Federal or National scheme of unemployment insurance, acceptable to the provinces, we would urge upon the Federal Government the immediate necessity of such legislation."

### Health Insurance

"Whereas, rising out of a resolution adopted by this legislature, information has been collected and presented on the subject of State Medicine and Health insurance; now, therefore, be it **RESOLVED**, That this Government is hereby instructed to appoint a commission consisting of at least five members of this legislature for the purpose of: (a) Considering and making recommendations to the next session as to the best method of making adequate medical and health services available to all the people of Alberta; (b) Reporting as to the financial arrangements which will be required on an actuarial basis to ensure same.

## LABOUR AND INDUSTRY IN QUEBEC IN 1930-31

**T**HE annual report of the Minister of Public Works and Labour of the Province of Quebec, recently published, reviews the work of the department during the fiscal period ended June 30, 1931. As was noted in the *LABOUR GAZETTE*, May, 1931, page 528, a distinct Department of Labour was established in the Province last year under the provisions of the Labour Department Act, which Department now administers the various provincial acts concerning labour and industry. The functions of the former Department of Public Works and Labour included the supervision of all proceedings under the Quebec Trades Dispute Act; the inspection of factories, especially from the standpoint of safety and health, under the provisions of the Industrial Establishments and Public Building Safety Acts; the administration of the Employment Bureau Act, the Stationary Engineers' Act, the Public Buildings Fire Protection Act, the Scaffolding Inspection Act, the Boiler Inspection Act, and the Women's Minimum Wage Act; the carrying out of the government's Fair Wage policy, requiring the payment of current rates of wages in connection with work under provincial government contracts; directing unemployment relief; superintending licensed registry offices for domestic servants; and supervising juvenile employment by means of educational certificates issued to children under sixteen. All these duties, including the administration of the new Workmen's Compensation Act, are now under the jurisdiction of the new Department of Labour.

*Unemployment Relief.*—The report of the commission dealing with unemployment relief outlines the activities of this Commission since its appointment in October, 1930. After the allocation of the provincial share for pub-

lic works and undertakings (under the federal Unemployment Relief Act, 1930), it was decided that the municipalities were to assume 50 per cent of the cost of the work, the remaining 50 per cent to be equally divided between the federal and provincial governments. However, as certain municipalities were unable to assume 50 per cent of the costs of these works, it was agreed that a large part of the expenses would be met by the two governments provided there be a contribution by the municipality, the proportion of such contribution being fixed at a minimum of 20 per cent. The Commission's duty was to study the requests of the various municipalities and report to the Minister of Public Works and Labour the amounts thought sufficient to allot to each either for public works or direct assistance, as well as establishing the percentage of the contribution by poor municipalities unable to pay 50 per cent of the cost of the work. The commission ceased its activities on July 1, 1931. During the period of its appointment, 1,241 out of 1,418 organized municipalities in the province applied for a grant. Of these, 1,080 municipalities obtained a certain amount and 161 refused the grant which had been voted them.

*Inspection of Factories.*—During the year the number of inspections of industrial establishments and public buildings totalled 2,896, of which total 1,477 were in the Montreal division; 1,116 in the Quebec division and 301 in the eastern townships. Among the duties of the inspection service is supervision over fire escapes. Twenty changes and repairs to fire escapes were ordered during the year, and there were 63 fire escapes constructed.

*Industrial Accidents.*—Accidents reported to the department in 1930-31 totalled 1,334, of which 20 were fatal. In the previous year

there were 1,618 accidents, of which 36 were fatal. With respect to accidents there were 342 complaints sent to the Montreal office. Upon investigation 178 were found to be justified. There were 15 complaints received by the Quebec inspection office.

*Working Hours and Overtime Permits.*—The report observes that the fifty-five hour week for women employed in factories soon became general in the province and has proved particularly beneficial in the textile industry and in laundries where the temperature is especially trying in summer. In regard to the laundry industry it is stated that the necessity of delivering laundry to ships about to sail obliges proprietors to ask frequently for permits for night work. It is pointed out, however, that in such cases the employers did not ask that the fifty-five hour limit be exceeded, but rather that an adjustment in hours be made so as to permit deliveries on time. There were 95 applications for overtime permits, 61 being granted.

*Registration of Children.*—Since the amendment to the Quebec Industrial Establishments Act in 1919 requiring educational certificates for children before they can be employed, a total of 35,343 children have been registered. During 1930-31, the number of registered children 14 to 16 years old totalled 3,025. Of this total, 2,407 were registered in the Montreal division, 338 in the Quebec division, and 280 in the eastern townships division. As regards registration, the report comments as follows: "Education being not compulsory, we find that the registration of children remains the best solution of this problem. Illiterate children cannot work in factories without a certificate of study."

*Stationary Engineers and Boilers.*—With reference to activities under the Stationary Engineers' Act, the report states that new examinations and renewal of licences have not decreased, and that, owing to numerous building contracts, stationary engineers and firemen do not suffer from unemployment as much as workmen in some other trades and occupations. Statistics are given showing the numbers of promotions of engineers, the renewals of certificates, and the inspections of steam boilers.

*Board of Examining Electricians.*—The report of the chief examiner notes marked improvement in the work of electrical installations. This progress is attributed partly to the publishing of the electrical code in French, and partly to educational work among electricians. Noticeable improvement was also manifested in lightning rod installations, greater efforts being made to comply with departmental regulations. During the year, 971 new electrical licences were issued, bringing the total number of licences since the inauguration of the service to 10,205.

*Provincial Employment Bureaus.*—The report of the general superintendent of provincial employment offices indicates the extent to which the economic depression effected employment opportunities and placements. The industries which suffered the most were lumbering, building and agriculture. The operations of the seven bureaus during the year were summarized as follows: total applications, 47,216; vacancies, 19,458; placements, 17,070.

## WOMEN'S MINIMUM WAGES IN QUEBEC IN 1930-31

THE fifth annual report of the Women's Minimum Wage Commission of the Province of Quebec, which is included in the general report of the Minister of Public Works and Labour, gives a detailed review of its work in administering the Act during the year ending June 30, 1931. Some idea of the extent of the Commission's administrative duties is indicated in the fact that the 23 enactments issued to the date of the report's publication cover 949 work shops in which are employed a total of 31,818 working women and apprentices. The report shows that orders governing the employment of female workers now apply in the following industries: Laun-

dries, dye works and dry cleaning establishments; printing in all its branches; textile trades and all allied processes; boot and shoe and leather manufacture; clothing in all its classifications; tobacco, cigar and cigarette manufacture; and the fur industry.

The orders pertaining to these industries were detailed in the following issues of the LABOUR GAZETTE: Laundries, December, 1926, page 1195, March, 1927, page 271, November, 1928, page 1198, February, 1929, page 175; printing and textile industries, November, 1927, page 1174, January, 1928, page 30, July, 1928, page 713; boot, shoe and leather industry,

May, 1929, page 489; fur industry, July, 1931, page 770.

The report of the Commission emphasizes how important in the administration of the Act is the system of investigations and inspections which are necessary to the enforcement of the statute. "In several instances," states the report, "these investigations were made after complaint from social agencies which had found, during their missions of charity, that if poverty prevailed in some homes it was partly due to the very low wage paid to work women during their first years of apprenticeship, a wage which logically should contribute to the family purse, but was insufficient to meet the requirements of the young girl."

Some aspects of the Commission's work are described in the following paragraphs:

"The father of a family being often out of work or working only intermittently, the children accept usually any position at any wage. Some employers abuse the situation by paying the least possible and having recourse to all kinds of excuses and ways to elude the Minimum Wage Act. Often the Commission is at last informed and intervenes, but, in the meantime the exploitation of human misery continues and escapes all our vigilance.

"In other cases the employers themselves complain that competitors take contracts from them at reduced rates, in evidence,—according to them—that the latter are not paying the minima of wages; such complaints are frequently well-founded; sometimes they are only imaginary, but in either case have been the subject of investigation.

"It is fairly difficult for a person who has not made a special study of this phase of the social question to realize the great difference existing in the wages paid in several similar industrial establishments, the maximum wage in one being hardly equal to the minimum wage in another. The same with working hours; in one establishment the week of 55 hours is still in force, whilst in the other it is 44 or 48 hours. These differences in wages and hours make competition so difficult, sow discontent among the workwomen and increase the difficulties of our arduous task.

"The industrial depression we are at present undergoing has reacted on the carrying out of the enactments issued by the Minimum Wage Commission. Some employers imagine that the simplest way to take is to reduce wages to the strictest minimum, invoking as a pretext that it is better to keep their staff on a reduced wage than to dismiss a portion. We saw other cases where the working hours had been increased without paying for the ad-

ditional hours, claiming that that was the only way for manufacturers to dispose of their products, obtain new contracts and meet competition."

The commission registered its opposition to any reduction of the wage scale, maintaining that "the minima of wages are low enough to be maintained under no matter what circumstances" and that the minima should not be changed until it has been proven by authentic statistics that the cost of living has been considerably reduced. On the contrary, the commission considers that "the only reasonable way of meeting the industrial crisis and restoring prosperity does not consist of wage reductions, nor of the number of employees, but in the systematic reduction of working hours." In all its activities, the commission endeavours "to have this social legislation observed, not so much by coercion as by conciliation and reason in order to obtain the fullest co-operation and make an ally."

During the year the commission was instrumental in securing arrears of wages to 13 employees, the total amount thus secured being \$275.70. The highest amount received by a workwoman was \$69.85 and the lowest was \$2.12.

*Permits.*—Particular attention is given by the commission to the protection of aged and infirm workwomen or those handicapped in any way. It is the practice to grant permits authorizing such women to work at a lower rate than the established minima when it is clearly shown that their age or infirmity rendered them incapable of doing the work reasonably to be expected of a normal workwoman, although in no case can such wage be less than the lowest minimum fixed by an enactment—namely \$7 a week in Montreal and \$6 outside of Montreal. During the year there were 47 establishments to which permits were granted, the permits in force on July 1, 1931, totalling 94.

The chief statistics as regards the employment of women in the various industries under the commission's minimum wage administration are summarized in the following paragraphs:

*Laundries and Dye Works.*—In the city of Montreal the number of laundries and dye works employing women was 45, and the total number of women employed therein was 1,271, the average weekly wage being \$12.52. For the rest of the province there were 22 firms employing 284 workwomen at an average weekly wage of \$9.62.

*Printing Industry.*—The statistics for the printing industry for the city of Montreal shows 104 firms employing women, the aver-

age weekly wage of the 988 women employed being \$13.19. In the rest of the province there were 31 firms employing 215 women at an average wage of \$9.82 per week.

*Textile Industry.*—The number of Montreal firms employing women in the textile industry was 13 and the number of women employed by these firms was 2,483, their average weekly wage was \$13.45. In the rest of the province, there were 33 firms employing 5,909 women, whose average weekly wage was \$12.33.

*Leather Industry.*—There were 54 firms in this industry in Montreal which employed 2,124 women, the average weekly wage being \$14.62. For the rest of the province, the figures presented were: number of firms employing women, 52; number of women employed, 1,597; average weekly wage, \$10.98.

*Tobacco, Cigar and Cigarette Industry.*—The information given as regards this industry in the city of Montreal was as follows: firms employing women, 22; number of women employed, 3,132; average weekly wage, \$12.78. The statistics for the rest of the province

were: firms employing women, 20; number of women employed, 924; average weekly wage \$10.98.

*Fur Industry.*—The particulars respecting the fur industry in the city of Montreal were: firms employing women, 116; number of women employed, 724; average weekly wage, \$15.88. In the rest of the province there were 30 firms, employing 294 workmen at an average weekly wage of \$10.42.

*Needle Trades.*—The report states that as enactments covering the needle trades only became effective on July 1, 1930, it was not deemed advisable to publish complete reports for the first year of operation. In this classification there are 407 establishments employing 11,873 women.

The statistics indicate that while the number of women employed decreased by about one thousand in the above industries, and while a number worked on reduced time, the average weekly wage was not only maintained but increased in every industry except laundering where it dropped from \$12.63 in 1930 to \$12.52 in 1931.

## MOTHERS' ALLOWANCES IN MANITOBA

THE last annual report of the Department of Health and Public Welfare, Manitoba, reviews the administrative activities under the jurisdiction of the Department during fiscal year ending April 30, 1931. It includes the report of the Division of Child Welfare, which has charge of the administration of the Child Welfare Act. This enactment, which combines in one statute practically all of the child welfare legislation of Manitoba, consists of several parts, each of which is concerned with some phase of the protection and care of children. Part III defines the conditions of bereaved and dependent children, and the grounds under which they may be enrolled under government assistance and yet remain in their own home. This section takes the place of the Mothers' Allowance Act which was repealed in 1924 when the Child Welfare Act was enacted (LABOUR GAZETTE, May, 1924, page 373, and August, 1924, page 626). A large part of the department's report deals with this third section of the Act.

During the fiscal year 1930-31, there were 311 applications for allowances, of which 203 were accepted, bringing the total number of families to 1,042 and the total number of enrolled children to 3,326. Children over the age of 14 years are not enrolled unless they are so handicapped physically as to be unable

to earn their own livelihood. It is pointed out that under the Act a child under the specified age may be enrolled as a "bereaved and dependent child", when, because of the death of the father or both parents, or the confinement of the father to a hospital for mental diseases, or the total and permanent disability of the father, such child is likely to suffer want. As already indicated, the children of 203 families were considered as falling within the above definition. Although the total number of cases cared for during the fiscal year was 1,042, at the end of the year there were 873 active cases, in 751 of which the father was dead, and, in 122, disabled.

The amount paid in allowances during 1930-31, was \$465,739.02 as compared with \$485,059.50 in the previous year. The total amount disbursed since the enactment of mothers' allowance legislation in 1916 is \$5,359,233.50.

The distribution of families in receipt of allowances indicates almost an equal division between town and country. In the urban centres of the province, the records showed 540 families with a total of 1,628 children enrolled as beneficiaries, while in the rural municipalities there were 502 families with 1,628 children.

It is pointed out that more than half the disability cases were caused by ill-health

"which practically eliminated the father as an economic factor, although in some cases he may be capable of doing some light work around the home, or, in the case of a farmer, of directing farm operations." Referring to this problem, the report states: "The increasing number of disability cases places a heavy load upon the appropriations for mothers' allowances and raises the question whether or not some sort of health insurance should be devised to take care of the incapacitated father who continues to reside in his own home but is unable to provide for his family. In this regard it is worth while to note again the increasing number of applications. The year 1930-31 had no less than 311—the highest number in the fifteen years during which allowances have been operating. The number accepted, 203, was the highest in any year except the year 1918-1919, when the number was 214. It may not be an erroneous forecast to say that if some other provision is not made for the large number of disability cases, and if more assistance is not obtained from older members of the families in real cases

of bereaved and dependent children, allowances will be endangered."

*Neglected Children.*—The administrative activities of the section of the Act relating to neglected children indicates that the number of wards in charge of the Child Welfare Division at close of the fiscal year was 256. However, the total number of children cared for by the Division during the year by way of investigation, supervision or guardianship was 787. If to this number be added children of societies and institutions who furnish reports, the total number of children dealt with reaches 1,900.

Other activities under the Child Welfare Act are reviewed under the following subjects: Children of unmarried parents; mentally deficient children; physically handicapped children; immigrant children; Children's Aid Societies, and Child Welfare Committees; and adoptions.

Included also in the main report of the department is the annual report of the Welfare Supervision Board of Manitoba and the annual report of the Fiscal Supervisor of Public Institutions and Relief.

### Unemployed in Forest Conservation

The March issue of *Pulp and Paper of Canada*, (formerly the *Pulp and Paper Magazine*) appears in a much improved and enlarged form. The suggestion is made in an editorial that labour now unemployed might usefully be applied to forest conservation.

"Our forest areas need attention," it is stated, "and the present would seem to be a good time to do it. Unemployed labour is plentiful, but it is open to question whether relief work in the nature of road building and similar distributions of public moneys will prove as good an investment as improving the forests. Extensive road-building programs carried through in the past have given us a network of good highways considering the size and sparse population of Canada. We can afford to rest for a while on this work. The forests, however, are assets of great present and potential value. Important national industries depend upon them. There has been much depletion and wastage which should be made good. From Nova Scotia to British Columbia there are forest areas where much could be done to improve conditions of growth. There are cut-over areas on which sparse and irregular production is taking place. Fires have wiped out young growth in many places. These should be replanted. The value of tree-planting has been demonstrated

and there are Government tree nurseries with plenty of stock available. Public funds might well be appropriated to employ the jobless in planting them out. In certain of the mill areas, curtailed operations have released many men. Under the guidance of skilled foresters, these unemployed could be kept usefully engaged in woods reconstruction. They would have a peculiar interest in helping to grow the raw material required by their industry. Canada must anticipate the need of cheaper wood for the paper industry. Unemployment relief directed to preservation and reforestation would be a sane and worthwhile investment of the public funds."

The Alberta government, on February 22, issued regulations under the Public Vehicles Act Governing freight vehicles and trucks. Such vehicles are divided into five classes according to their ownership and the purposes for which they are used. Yearly licences are to be issued for each class of vehicles, the fees paid for trucks for freight being graduated according to gross weight. Insurance of freight vehicles and trucks against damage caused to life or property is obligatory.

## RECOMMENDATIONS OF CANADIAN RAILWAY BROTHERHOOD TO COMMISSION ON TRANSPORTATION

THE last issue contained (page 300) the recommendations that were submitted on February 15 to the Royal Commission on Transportation by the Brotherhoods representing the running trades and railway shops (The appointment of this Commission was noted in the *LABOUR GAZETTE*, December, 1931, page 1280). On the same day, on behalf of the Canadian Brotherhood of Railway Employees, Messrs. A. R. Mosher and M. M. Maclean, president and secretary of the Brotherhood, laid before the Commission a statement in regard to the problem of transportation in Canada.

At the outset, the memorandum points out that the transportation problem is part of the general problem of developing a planned national economy: "A fundamental requirement of an improvement in the position of the railways is the development of a planned national economy, controlled and directed by the conscious purpose of delivering industry and agriculture from the evils of the vicious business cycle, with its disorderly phenomena of booms and depressions, its periodic infliction of bankruptcy, unemployment, poverty in the midst of plenty, mass misery, and fear. Given a distribution of national income permitting the maintenance of a proper balance between production and consumption, the present powers of production could be utilized to capacity, and kept turning out such a supply of goods that the railways and other means of transport would have no problems demanding economies at the expense of the opportunities of railway workers to earn a livelihood. That being the real problem, the only measures of permanent value for the improvement of the transportation situation need to be directed towards the adjustment of the railways and other means of transport to their proper role in the working out of a planned national economy, with production duly articulated to consumption."

### Recommendations

The memorandum contained the following recommendations, "indicating the principles that must sooner or later be applied if a cloudburst of social unrest is not to break over the economic life of Canada":—

(1) That all measures and policies looking to the amelioration of the transport situation should fit into a general plan envisaging the eventual unification and consolidation of all forms of transport,—railways, motor vehicles, aircraft, and shipping using inland waterways—under public control and public ownership.

(2) That, pending the realization of such general plan, measures and policies should be designed to provide for the increasing democratization of the transport industry by the organization of ways and means for the deliberative and conscious co-operation between capital and labour necessary to solve the grave problems of bringing about more equitable relations between them, and thus enable the railway industry to assist in the task of creating the conditions which will make it possible to exercise rational control over the whole economic machine, causing it to function in an orderly manner, instead of running at reckless speed in one phase of the business cycle and breaking down in another, wrecking countless individual plans, hopes and ambitions, throwing millions into the abyss of unemployment, and spreading disillusionment, fear and misery far and wide.

(3) That there should be legislation specifically providing for the permanent and adequate representation of railway labour upon the Board of Railway Commissioners.

(4) That there should be legislative provision for the adequate representation of railway labour through its organizations on the directorate and management of the railways, to the end that labour should have a voice and influence in shaping general policies, and for the reason that policies in which the interests of capital are the sole or principal aim, and which do not take proper account of the interests of the workers and recognize their importance as a medium for the distribution of purchasing power, have, as is now clearly apparent, set up restrictive tendencies which defeat their special purpose of providing returns on capital, and, at the same time, also defeat what should be the general social policy of any industry—an expansion of employment to provide opportunities of livelihood for an increasing population.

(5) That the alienation of the Canadian National Railways from the direct control and fractional ownership of the Canadian public to place them under private control would be a retrograde step, for the reason that with the transformation of private enterprise into corporate enterprise, and the expropriation of small business by big business, the profit motive is no longer a satisfactory actuating principle of the conduct of the railways or any other industry, as the more completely and immediately it is realized, the greater becomes the spread between production and consumption, especially under present conditions when profits taken, not for consumption,

but to be converted into new capital goods, cannot readily be re-invested profitably, owing to the fact that there are no longer new countries inviting settlement and development on a large scale, and also to the fact that the invention of new-type industries inviting exploitation has not been proceeding as fast as the generation of potential new capital.

(6) That the national interests will be best served by consolidating the Canadian National Railways and the Canadian Pacific Railway under public auspices, and that the obligation to be assumed on account of Canadian Pacific common stocks should be the rate of dividend American railways are legally allowed to earn, or the average of the dividend paid over the whole period of the present business cycle, for the reason that, while over one-half the C.P.R. common stock, and probably a greater proportion of its other securities, are held by non-residents of Canada, the value of C.P.R. properties has accrued largely from gifts of Canadian money, lands and mines, and through the general agricultural and industrial development arising from the labour of the Canadian people.

(7) That any schemes of co-operation between the two railways designed to effect economies in service should take account of the proper interests of labour, as in the long run capital would be better advised to declare a moratorium on dividends and interest for a certain period in order to permit a greater distribution of purchasing power among the workers, which would thereby increase the demand for consumptive goods, than to enforce further moratoriums upon opportunities of employment. The government railways should set the example of a five-day week as a means of providing much-needed jobs.

(8) That the determination of the spheres of service of motor vehicles plying for hire, and the conditions of their operation should be brought under the control of the Board of Railway Commissioners, or an analogous body.

(9) That private motor transportation be prohibited from operating in spheres where existing transport facilities are adequate or where the steam railways are willing to provide motor vehicle services, which, by being complementary to, or auxiliary to, the railway facilities, may furnish the public with more efficient and economical transportation.

(10) That all commercial vehicles using the public highways for hire be required to pay fees commensurate with the use and cost of such highways, as well as the depreciation which is caused to a considerable extent by trucks and buses.

(11) That, in the interests of public safety, operators of all motor vehicles be required to pass a qualifying physical examination, similar to that required of operators on railway trains.

(12) That, in the further interests of public safety, operators of motor vehicles be subject to regulations (such as apply to railways) prohibiting excessive hours of duty.

(13) That motor transport concerns be required to furnish a guarantee of sufficient financial responsibility to assure the payment of any claims for damages that may legally be assessed against them.

(14) That where manufacturers, wholesale houses, chain stores or other concerns use their own motor vehicles to distribute their own goods beyond their own urban limits, they should be prohibited from using such vehicles to carry return freight obtained from other concerns.

### Railway Operations in the United States in 1931

In a review of railway operations in the United States in 1931, Mr. Julius H. Parmelee, director of the Bureau of Railway Economics (Washington) outlines the main features in the transportation problem. While the general situation was unfavourable the director finds some encouraging circumstances: "The railways of the United States in 1931", he says, "presented a more solid front against adversity than in any peace-time period in their history. They filed a nation-wide petition for increased freight rates, and on a uniform basis for all districts. When the Interstate Commerce Commission granted them the partial rate increase, on condition that the revenues derived from the increase be pooled, the railways

again made common cause and secured from the Commission certain modifications of the original conditions. At the close of the year, they were engaged in organizing the Railroad Credit Corporation for the strengthening of the financial position of the weaker lines, and were successful in assuring support of the railway companies for such a program. In addition, the railways in 1931 took a number of steps toward a more nearly standardized handling of their labour and wage problems.

"Another gain was the growth of a clearer understanding of the railway situation in 1931 by the public than for some time in the past. Part of this was due to the facts developed in the course of the rate case, while part grew

out of a gradually increasing public realization that railway credit is a foundation stone in our economic and financial structure. This realization manifested itself in a number of ways. The Interstate Commerce Commission's original and supplemental reports in the rate case clearly typified it. Governmental interest in the financial welfare of the railways was exhibited in several quarters, culminating in the proposal for a Reconstruction Finance Corporation, contained in the President's annual message to Congress. This proposal was under active consideration by Congress at the close of the year. How all these factors will eventuate cannot yet be foreseen. But with greater solidarity of interests and of policies within the industry, and with public concern over its financial situation, it seems clear that foundations have been laid for a broader approach to its problems in the future."

Some of the outstanding facts of the year's operations are stated as follows:—

Freight traffic in 1931 declined about 19 per cent below 1930. The cumulative declines of

1930 and 1931 brought the level of freight movement in 1931 down to that of 1921. Passenger traffic fell 18.4 per cent below that of 1930. Total passenger-miles in 1931 were less in number than in any previous year since 1904. Total operating revenues in 1931 declined 21 per cent below 1930, the aggregate for the year being lower than in any previous year since 1917. Total operating expenses were lower in 1931 than in 1930 by 18 per cent, and were less than for any preceding back to 1917. All of the principal groups of operating expenses were drastically reduced in 1931. The operating ratio averaged 77.1 per cent in 1931, compared with 74.4 per cent in 1930. Net railway operating income aggregated \$531,000,000 in 1931, which was a decline of \$354,000,000, or 40 per cent, under 1930. The decline from 1929 to 1931 was \$744,000,000 or 58 per cent. Rate of return earned on railway property investment was 1.98 per cent in 1931. The corresponding rates for 1930 and 1929 were 3.36 per cent and 4.48 per cent, respectively. The rate for 1931 was lower than in any year since 1920.

The establishment jointly by the governments of the Prairie Provinces of a commission to consider the question of the adjustment of farmers' debts, was favourably considered by the Manitoba Legislature in March, on the motion of Mr. D. L. Campbell, government member for Lakeside. The rural situation was so critical, he said, that the government would be justified in co-operating with the other western governments to create a board of authority to deal with problems of western farmers. Four possible lines of action were suggested, namely, a funding of present liabilities, including taxes; postponement of payment dates; an allowance by creditors of "premium payments" for amounts paid within a specified time; and a general debt readjustment. Mr. Campbell suggested that the last named course would afford the only chance of avoiding wholesale land abandonment.

The report of an inquiry into the administration of the Mothers' Pensions Act of British Columbia, which was recently carried out under the auspices of the Canadian Council on Child and Family Welfare, makes recommendations for the re-organization of the methods that have hitherto been followed, with a more thorough investigation of the eligibility of mothers for allowances, and more careful supervision to ensure that the purpose of the Act is being achieved. The report

states the number of cases and the cost of the allowances have steadily mounted out of proportion to the increase in population, except for a period of two years after the Act was placed under the administration of the Workmen's Compensation Board. In British Columbia, it is pointed out, 212 families per 100,000 of the population, receive allowances, this number comparing with 245 in Saskatchewan, 195 in Ontario, 174 in Alberta, 147 in Manitoba, 178 in Nova Scotia. British Columbia's basic rate of allowance of \$57.50 compares with \$60 in Alberta, \$59.75 to \$70 in Manitoba, \$60 in Nova Scotia, \$35 to \$45 in Ontario, \$30 in Saskatchewan. A great part, it is stated, of the high cost of mothers' allowances in British Columbia is due to a tendency to interpret the Act as a source of aid for a wide range of relief and assistance in types of serious social problems for handling which no other adequate machinery exists.

A recent bulletin (No. 20) in the 1931 Census Series, issued by the Dominion Bureau of Statistics, gives the number of the various classes of livestock in the Province of Quebec in 1931, as compared with the figures in the 1921 census. The number of horses showed a decline from 332,533 to 304,537, and cattle, swine, poultry and bee-hives showed increases, but there was a slight decline in the number of sheep.

## ANTI-INJUNCTION LAW ADOPTED BY UNITED STATES CONGRESS

**A**N Act to amend the Judicial Code of the United States and to define and limit the jurisdiction of courts of equity in regard to the issuance of injunctions in cases arising out of labour disputes, was signed by President Hoover on March 23. This measure was passed by a vote in the Senate of 75 to 5. All five votes against the bill were cast by Republican Senators from the New England States. The House vote was 316 to 13. The bill was described by its proponents as well as by its opponents as the most far-reaching legislation affecting the judiciary in many years. The idea for anti-injunction legislation has been brewing actively since President Cleveland's use of an injunction in the Pullman strike of 1894. The Act declares the right of labour to organize, outlaws the so-called "yellow dog contract," strictly limits the grounds on which labour injunctions may be issued, prohibiting them except after open hearing when unlawful acts have been committed unless complainant has no adequate remedy at law, unless public officers fail to furnish adequate protection, and unless the employer has made every reasonable effort to settle the dispute. It also provides for jury trials in all contempt cases, except those committed in the presence of the court, or so near as to interfere with the administration of justice, and gives defendants in contempt cases arising from attacks on the character or conduct of the judge the right to demand retirement of the sitting judge and hearing of the case by another.

### TEXT OF ACT

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no court of the United States, as herein defined, shall have jurisdiction to issue any restraining order or temporary or permanent injunction in a case involving or growing out of a labour dispute, except in a strict conformity with the provisions of this Act; nor shall any such restraining order or temporary or permanent injunction be issued contrary to the public policy declared in this Act.

Sec. 2. In the interpretation of this Act and in determining the jurisdiction and authority of the courts of the United States, as such jurisdiction and authority are herein defined and limited, the public policy of the United States is hereby declared as follows:—

Whereas under prevailing economic conditions, developed with the aid of governmental authority for owners of property to organize in the corporate and other forms of ownership association, the individual unorganized worker is commonly helpless to exercise actual liberty of contract and to protect his freedom of labour, and thereby to obtain acceptable terms and conditions of employment, wherefore, though he should be free to decline to associate with his

fellows, it is necessary that he have full freedom of association, self-organization, and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment, and that he shall be free from the interference, restraint or coercion of employers of labour, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection; therefore, the following definitions of, and limitations upon, the jurisdiction and authority of the courts of the United States are hereby enacted.

Sec. 3. Any undertaking or promise, such as is described in this section, or any other undertaking or promise in conflict with the public policy declared in section 2 of this Act, is hereby declared to be contrary to the public policy of the United States, shall not be enforceable in any court of the United States and shall not afford any basis for the granting of legal or equitable relief by any such court, including specifically the following:—

Every undertaking or promise hereafter made, whether written or oral, express or implied, constituting or contained in any contract or agreement of hiring or employment between any individual, firm, company, association, or corporation, and any employee or prospective employee of the same, whereby

(a) Either party to such contract or agreement undertakes or promises not to join, become, or remain a member of any labour organization or of any employer organization or

(b) Either party to such contract or agreement undertakes or promises that he will withdraw from an employment relation in the event that he joins, becomes, or remains a member of any labour organization or of any employer organization.

Sec. 4. No court of the United States shall have jurisdiction to issue any restraining order or temporary or permanent injunction in any case involving or growing out of any labour dispute to prohibit any person or persons participating or interested in such dispute (as these terms as herein defined) from doing, whether singly or in concert, any of the following acts:—

(a) Ceasing or refusing to perform any work or to remain in any relation of employment;

(b) Becoming or remaining a member of any labour organization or of any employer organization, regardless of any such undertaking or promise as is described in section 3 of this Act;

(c) Paying or giving to, or, withholding from, any person participating or interested in such labour disputes, any strike or unemployment benefits or insurance, or other moneys or things of value;

(d) By all lawful means aiding any person participating or interested in any labour dispute who is being proceeded against in, or is prosecuting, any action or suit in any court of the United States or of any State;

(e) Giving publicity to the existence of, or the facts involved in, any labour dispute, whether by advertising, speaking, patrolling, or by any other method not involving fraud or violence;

(f) Assembling peaceably to act or to organize to act in promotion of their interests in a labour dispute;

(g) Advising or notifying any person of an intention to do any of the acts heretofore specified;

(h) Agreeing with other persons to do or not to do any of the acts heretofore specified; and

(i) Advising, urging, or otherwise causing or inducing without fraud or violence the acts heretofore specified, regardless of any such undertaking or promise as is described in section 3 of this Act.

Sec. 5. No court of the United States shall have jurisdiction to issue a restraining order or temporary or permanent injunction upon the ground that any of the persons participating or interested in a labour dispute constitute or are engaged in an unlawful combination or conspiracy because of the doing in concert of the acts enumerated in section 4 of this Act.

Sec. 6. No officer or member of any association or organization, and no association or organization participating or interested in a labour dispute, shall be held responsible or liable in any court of the United States for the unlawful acts of individual officers, members, or agents, except upon clear proof of actual participation in, or actual authorization of, such acts, or of ratification of such acts after actual knowledge thereof.

Sec. 7. No court of the United States shall have jurisdiction to issue a temporary or permanent injunction in any case involving or growing out of a labour dispute, as herein defined, except after hearing the testimony of witnesses in open court (with opportunity for cross-examination) in support of the allegations of a complaint made under oath, and testimony in opposition thereto, if offered, and except after findings of fact by the court, to the effect—

(a) That unlawful acts have been threatened and will be committed unless restrained or have been committed and will be continued unless restrained, but no injunction or temporary restraining order shall be issued on account of any threat or unlawful act excepting against the person or persons, association, or organization making the threat or committing the unlawful act or actually authorizing or ratifying the same after actual knowledge thereof;

(b) That substantial and irreparable injury to complainant's property will follow;

(c) That as to each item of relief granted greater injury will be inflicted upon complainant by the denial of relief than will be inflicted upon defendants by the granting of relief;

(d) That complainant has no adequate remedy at law; and

(e) That the public officers charged with the duty to protect complainant's property are unable or unwilling to furnish adequate protection.

Such hearing shall be held after due and personal notice thereof has been given, in such manner as the court shall direct, to all known persons against whom relief is sought, and also to the chief of those public officials of the county and city within which the unlawful acts have been threatened or committed charged with the duty to protect complainant's property: Provided, however, That if a complainant shall also allege that, unless a temporary restraining order shall be issued without notice, a substantial and irreparable injury to complainant's property will be unavoidable, such a temporary restraining order may be issued upon testimony

under oath, sufficient, if sustained, to justify the court in issuing a temporary injunction upon a hearing after notice. Such a temporary restraining order shall be effective for no longer than five days and shall become void at the expiration of said five days. No temporary restraining order or temporary injunction shall be issued except on condition that complainant shall first file an undertaking with adequate security in an amount to be fixed by the court sufficient to recompense those enjoined for any loss, expense, or damage caused by the improvident or erroneous issuance of such order or injunction, including all reasonable costs (together with a reasonable attorney's fee) and expense of defence against the order or against the granting of any injunctive relief sought in the same proceeding and subsequently denied by the court.

The undertaking herein mentioned shall be understood to signify an agreement entered into by the complainant and the surety upon which a decree may be rendered in the same suit or proceeding against said complainant and surety, upon a hearing to assess damages of which hearing complainant and surety shall have reasonable notice, the said complainant and surety submitting themselves to the jurisdiction of the court for that purpose. But nothing herein contained shall deprive any party having a claim or cause of action under or upon such undertaking from electing to pursue his ordinary remedy by suit at law or in equity.

Sec. 8. No restraining order or injunctive relief shall be granted to any complainant who has failed to comply with any obligation imposed by law which is involved in the labour dispute in question, or who has failed to make every reasonable effort to settle such dispute either by negotiation or with the aid of any available governmental machinery of mediation or voluntary arbitration.

Sec. 9. No restraining order or temporary or permanent injunction shall be granted in a case involving or growing out of a labour dispute, except on the basis of findings of fact made and filed by the court in the record of the case prior to the issuance of such restraining order or injunction; and every restraining order or injunction granted in a case involving or growing out of a labour dispute shall include only a prohibition of such specific act or acts as may be expressly complained of in the bill of complaint or petition filed in such case and as shall be expressly included in said findings of fact made and filed by the court as provided herein.

Sec. 10. Whenever any court of the United States shall issue or deny any temporary injunction in a case involving or growing out of a labour dispute, the court shall, upon the request of any party to the proceedings and on his filing the usual bond for costs, forthwith certify as in ordinary cases the record of the case to the circuit court of appeals for its review. Upon the filing of such record in the circuit court of appeals, the appeal shall be heard and the temporary injunctive order affirmed, modified, or set aside with the greatest possible expedition, giving the proceedings precedence over all other matters except older matters of the same character.

Sec. 11. In all cases arising under this Act in which a person shall be charged with contempt in a court of the United States (as herein defined), the accused shall enjoy the right to a speedy and public trial by an impartial jury

of the State and district wherein the contempt shall have been committed: Provided, That this right shall not apply to contempts committed in the presence of the court or so near thereto as to interfere directly with the administration of justice or to apply to the misbehaviour, misconduct, or disobedience of any officer of the court in respect to the writs, orders, or process of the court.

Sec. 12. The defendant in any proceeding for contempt of court may file with the court a demand for the retirement of the judge sitting in the proceeding, if the contempt arises from an attack upon the character or conduct of such judge and if the attack occurred elsewhere than in the presence of the court or so near thereto as to interfere directly with the administration of justice. Upon the filing of any such demand the judge shall thereupon proceed no further, but another judge shall be designated in the same manner as is provided by law. The demand shall be filed prior to the hearing in the contempt proceeding.

Sec. 13. When used in this Act, and for the purposes of this Act—

(a) A case shall be held to involve or to grow out of a labour dispute when the case involves persons who are engaged in the same industry, trade, craft, or occupation; or have direct or indirect interests therein; or who are employees of the same employer; or who are members of the same or an affiliated organization of employers or employees; whether such dispute is (1) between one or more employers or associations of employers and one or more employees or associations of employees; (2) between one or more employers or associations of employers and one or more employers or associations of employers; or (3) between one or

more employees or associations of employees and one or more employees or associations of employees; or when the case involves any conflicting or competing interests in a "labour dispute" (as hereinafter defined) of "persons participating or interested" therein (as hereinafter defined).

(b) A person or association shall be held to be a person participating or interested in a labour dispute if relief is sought against him or it, and if he or it is engaged in the same industry, trade, craft, or occupation in which such dispute occurs, or has a direct or indirect interest therein, or is a member, officer, or agent of any association composed in whole or in part of employers or employees engaged in such industry, trade, craft, or occupation.

(c) The term "labour dispute" includes any controversy concerning terms or conditions of employment, or concerning the association or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, regardless of whether or not the disputants stand in the proximate relation of employer and employee.

(d) The term "court of the United States" means any court of the United States whose jurisdiction has been or may be conferred or defined or limited by Act of Congress, including the courts of the District of Columbia.

Sec. 14. If any provision of this Act or the application thereof to any person or circumstance is held unconstitutional or otherwise invalid, the remaining provisions of the Act and the application of such provisions to other persons or circumstances shall not be affected thereby.

Sec. 15. All Acts and parts of Acts in conflict with the provisions of this Act are hereby repealed.

## PROGRESS OF MOVEMENT TO ESTABLISH ECONOMIC COUNCILS

### Economic Council in Greece

The Greek Prime Minister, Mr. Venizelos, introduced in the Chamber on February 18, 1932, a Bill for the establishment of a National Economic Council. The preamble to the Bill states that the necessity of following closely the complex and varied questions of modern economic life on a uniform basis and without administrative divergencies has made it necessary to establish in Greece a scientific institute for the detailed and systematic study of economic questions, to help the Government with scientific information and advice in the application of a complete economic plan. The interdependence of economic, monetary and financial questions and the instability of the general economic position demand the establishment of this special institution, with a view to the preparation of measures relating to finance, currency and social welfare. The Government considers that this institution, which will involve only a very small expenditure, will render great service towards the economic restoration of the country.

The Council will consist of the Prime Minister, a vice-president elected by the Council, and 20 titular members chosen by the Government, together with auxiliary members who may be co-opted according to circumstances. The vice-president and the titular members will be appointed for three years and will be unpaid. The Council will have a secretariat, the director of which will also be unpaid. This official will be chosen from among the higher civil servants of the Government Departments concerned, and will be appointed by Decree. The secretariat will comprise six sections, dealing respectively with agriculture, industry and handicrafts, commerce and transport, public economy, currency, and political, labour and social questions.

### Social Insurance Council in Poland

The Polish Government recently established a national advisory body to deal with questions of social insurance. The functions and composition of this body, which will be known

as the Social Insurance Council, are defined by an Order of the Minister of Labour and Social Welfare. The Council will be called upon to give its opinion on Bills and draft Orders or Decrees of a general nature submitted to it by the Minister of Labour and Social Welfare. It will also give its opinion on any other question in regard to which the Ministry may decide to consult it.

In the field of accident insurance the Government must consult the Council whenever a question arises of fixing or altering the areas covered by insurance institutions or their standard regulations; of classifying undertakings according to the accident risks they involve and drawing up the scale of premiums; of making levies on the reserve fund; or of exempting from the compulsion to insure any

groups of undertakings which may apply for leave to become self-insurers, while guaranteeing to victims of accidents benefits at least equal to those of the general insurance system.

The Council will consist of 40 members appointed by the Minister of Labour and Social Welfare; of these twelve will be representatives of the workers and salaried employees, chosen from lists of candidates drawn up by the national organizations of workers and salaried employees, while twelve will represent the employers, being chosen from lists submitted by the Chambers of Industry and Commerce, the Chambers of Agriculture and the employers' organizations, and 16 will be chosen freely by the Minister from among persons distinguished for theoretical or practical work in the field of social insurance.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Fourth Safety Conference in Province of Quebec

The Fourth Annual Industrial Safety Conference under the auspices of the Province of Quebec Safety League will be held on May 16-17, at Montreal. The congress will be of exceptional interest bearing in mind the new Workmen's Compensation Act and the Quebec Association for the Prevention of Industrial accidents, incorporated in accordance with article 106 of the new Act. Both the Province of Quebec Safety League through its industrial section and the new association will be the sponsors of this Congress, which it is hoped will be the most outstanding in the annals of safety in the Province.

### Accidents in Nova Scotia in 1931

The March issue of *Industrial Safety News*, published by the Nova Scotia Accident Prevention Association, states that "the total number of accidents from all classes of industry during the year 1931 was 5,200 as compared with 7,593 in 1930. This is a decrease of 2,393 or 31.5 per cent. This number, however, does not include medical aid cases which resulted in the loss of less than one day's work. The largest group decreases in accidents are in Mining and Lumbering and Woodworking—viz; 45.4 per cent and 36.9 per cent—although other groups reported smaller percentage reductions. These reductions reflect to a considerable extent the contraction in industrial operations throughout the Province during 1931, but this may be more accurately determined in the near future when actual payroll figures for last year are available.

"Two classes reported more accidents in 1931 than in the previous year—the Public Utilities 26.9 per cent and the Provincial and Dominion Government Departments 48.7 per cent. Perhaps it should be explained that the increase in the former group has not been contributed by the public utility companies of the Province, inasmuch as municipalities and highway contractors are also included in this Class. The increase in the number of accidents probably is due to the greater number of men employed by the municipalities on various unemployment relief projects. This same reason will likely also account for the larger number of accidents from Provincial and Dominion Government Departments, as these bodies made large expenditures of monies during the year in providing relief work throughout the Province."

### Doctors and Health Insurance

Compulsory health insurance was recommended by various witnesses who gave evidence before the Quebec Commission on Social Insurance at their session at Montreal on March 19. Dr. Frank G. Pedley, assistant professor of Industrial Hygiene at McGill University, reviewed the present conditions of health service, and stated that it was generally regarded as being unsatisfactory in that so many doctors have to give their services free. A survey made last December showed that the minimum living cost per month for a family of five was \$110. A considerable proportion of the population earns under \$1,000 per annum and thus most wage earners cannot provide unassisted for illness insurance. The average expenditure per year for such a

family for medical attention and the accompanying needs is \$140.

Turning to the survey made on the subject of health insurance by the British Medical Association, Dr. Pedley cited several conclusions which had been drawn by that body:—(1) The system of medical service should be directed as much as possible to the preventive as well as the curative and there should be ready access between patient and physician. This is to say that there should be no fee barrier; (2) The system should be made with the general practitioner as the unit at the base; (3) Arrangements should go beyond the general practitioner and provide specialists, such as nurses, surgical, dental, optical and hospital services; (4) There should be free choice of physicians; (5) The quality and discipline of the physician should be in the hands of the medical profession.

### Progress of Safety in Mines in United States

Progress in the safety movement in the coal mines in the United States during 1931 is noted in a recent statement by Mr. Scott Turner, director of the Bureau of Mines. The amount of coal produced for each fatality was 300,000 short tons, this being an increase of 40,000 tons per fatality in 1930, and an increase of about 110,000 tons per fatality over the record 21 years ago. Last year's progress in safety, according to Mr. Turner, was largely the cumulative effect of the safety measures and organization that have resulted from the close co-operation between mine operators, State and Federal mining officials, and miners' organizations. These safety measures include the increasing substitution of permissible explosives for the more dangerous black powder in coal-blasting operations, the use of permissible electric haulage and mining equipment to avoid explosions that might be caused by the ignition of gas or dust by an electric arc, and the rock-dusting of many mines to prevent widespread explosions. Even more potent as a safeguard against accidents, in Mr. Turner's opinion, is the general awakening of mining officials and employees to the importance of safety, and a growing realization on the part of mine executives of the possibilities of greater economy in production through the prevention of accidents.

### Medical Service in Industry.

"Medical Supervision and Service in Industry" is the title of a volume published recently by the National Industrial Conference Board (New York), giving the results of an investigation of the existing provisions for medical service in American industry. It is stated that "a survey of medical work in in-

dustry during the period 1924 to 1930 shows that this work is being introduced into a steadily increasing number of establishments, and that a considerable proportion of the establishments that have recently undertaken medical work are the smaller plants employing less than 1,000 or even less than 500 employees. The physician made his entry into industry in the larger establishments, in which the *per capita* cost of medical service was least and the need for such service was first recognized. As the volume of statistical data on accident frequency has grown, it has been learned that there are more accidents per worker in smaller than in larger establishments. The enactment of workmen's compensation laws gave a powerful stimulus to the development of medical service in the smaller plants as well as the larger. Means of reducing compensation costs have been examined carefully by industrial executives, and one of the measures adopted generally has been the establishment of plant medical service."

The report notes the increasing usefulness of the medical departments in various directions: "At the outset the work of both the plant physician and the nurse was chiefly in connection with accident cases. The compilation of statistics on the causes of absenteeism has shown that far more time is lost in industry on account of sickness than on account of accidents. By treating minor illnesses at the plant the medical department can reduce the rate of absenteeism to a certain extent. Even more effective were diagnosis and advice and the introduction of a definite health program. Maintenance of health in every employee became the goal of the plant physician. Physical examinations given at the time of employment for the purpose of disclosing defects that should be remedied, and later periodic examinations to provide a regular check on the employee's physical condition, played an important part in such programs. By informing the employee what was wrong with him and what to do about it, a valuable service was performed both to employer and employee through increasing the latter's years of usefulness in industry and the quality of his work. Enterprises that had little or no use for a medical department to care solely for injured employees could benefit as much as industries with high accident frequency through the prevention, detection, and treatment of illness. When medical work in industry came to mean supervision of health of employees, the field of medicine in industry was greatly extended."

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Canadian Delegation to the Sixteenth Session of the International Labour Conference

The Canadian delegation to the Sixteenth Session of the International Labour Conference, which opened in Geneva on April 12, comprised the following:—

*Government Delegates*—The Honourable Senator G. D. Robertson, Ottawa, Ont.

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

*Technical Advisers to Government Delegates*—

Hon. C. J. Arcand, Minister of Labour of Quebec, Quebec, P.Q.

Mr. Robert H. McGowan, Cobalt, Ont.

Mr. Pierre Beaulé, Quebec, P.Q.

Mr. E. H. Cook, Winnipeg, Man.

*Employers' Delegate*—Mr. Melville P. White, Canadian General Electric Co., Toronto, Ont.

*Workers' Delegate*—Mr. Tom Moore, President, Trades & Labour Congress of Canada, Ottawa, Ont.

*Technical Adviser to Workers' Delegate*—Mr. Percy R. Bengough, Vice-President, Trades & Labour Congress of Canada, Vancouver, B.C.

Reference is made on page 377 to the election of the Hon. Senator Robertson as President of the Conference.

It is expected that an article dealing with the proceedings of the Conference and containing the texts of any Draft Conventions and Recommendations that may be adopted, will appear in the May issue of the LABOUR GAZETTE.

### The International Coal Problem

In the course of a session which closed on January 19, 1932, the Economic Committee of the League of Nations adapted, for submission to the Council of the League, a report on the coal problem, the text of which appears in the issue of February 1 of *Industrial and Labour Information*, the weekly publication of the International Labour Office. After a free exchange of views of both consumers and workers, the Economic Committee, in view of the fact that, on the one hand, the aggravation of the crisis and, on the other hand, the progress effected in national organization, show that the realization of the idea of an international coal agreement is both more urgent than ever and apparently within reach; considering the necessity for overcoming a crisis which affects one of the fundamental branches of production and for doing so without thereby injuring the interests of consumers, whether countries or individuals: 1. Proposes that the Council should communicate the present report to Governments, bringing to their notice the international importance of this movement in the serious situation which exists at present; 2. In accordance with the principle laid down by the World Economic Conference and confirmed by all subsequent studies of the Economic Organization relating to the publicity given to important international agreements, the Economic Committee expresses its confidence that knowledge of the fundamental lines of the agreements which are already concluded, or which are to be concluded, will be available to all, so that the interests involved, and more particularly the consuming countries, may have all the information necessary to enable them to express an opinion on the effects of the said agreements.

## Workmen's Compensation in Alberta

The Workmen's Compensation Board of Alberta recently issued the following regulation (published in the *Alberta Gazette*, March 31, 1932), in accordance with the provisions of the Workmen's Compensation Act (Accident Fund).

"The attention of the Workmen's Compensation Board", it is stated, "has been directed to the fact that there has been a substantial reduction in the cost of providing table-board and lodging, and for the purpose of arriving at the earnings of a workman on which assessments will be payable and on which compensation would be computed, the following regulation has been adopted:

### REGULATION No. 17

Employers in industries coming within the scope of The Workmen's Compensation Act, who supply board or board and lodging to their workmen, will be required to add seventy-five cents per day to the amount of earnings shown on the payroll as the wages of such workman, for each day or part of a day he is in their employment, and for the purpose of arriving at the average earnings of each workman on which compensation will be payable, the sum of seventy-five cents per day shall be added to his earnings for each day or part of a day he is in their employment.

"The former order of the Board, providing for \$1 a day board allowance for assessment and compensation purposes, is hereby rescinded, and this regulation shall have effect as from January 1, 1932."

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1, was 7,709, the employees on their payrolls numbering 809,704 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

February was 1,819, having an aggregate membership of 183,159 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 70 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of March, 1932, as Reported by Employers

Largely owing to seasonal curtailment in the out-door industries, there was a falling-off in employment at the beginning of March; this involved the release of more workers than were laid off on March 1, 1931, but the reduction was smaller than that reported in the late winter of 1930. Statements were furnished to the Dominion Bureau of Statistics by 7,709 of the larger employers of labour throughout Canada, whose payrolls aggregated 809,704 persons on March 1, 1932, as compared with 819,736 in the preceding month. This decrease caused the index number (based upon the average for 1926 as 100) to decline from 89.7 on February 1, 1932, to 88.7 at the beginning of March, as compared with 100.2, 110.2, 111.4, 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Improvement was indicated in manufacturing, notably of textile and iron and steel products, but seasonal curtailment was shown in logging, mining, transportation, trade and construction, while communications also reported reduced activity.

#### Employment by Economic Areas

The trend was downward in the Maritime and Prairie Provinces and Ontario, but was favourable in Quebec and British Columbia.

*Maritime Provinces.*—There was a considerable decrease in the Maritime Provinces, where 538 employers reduced their staffs from

68,384 persons on February 1, to 63,559 at the beginning of March. Gains were registered in railway construction and manufacturing, chiefly of textile products, while logging, transportation and trade were slacker, and these were large losses in highway construction, as the unemployment relief program progressed. Employment on March 1, 1931, had also shown a decline, but the index then was higher than on the date under review.

*Quebec.*—As on March 1, 1931, employment showed an increase in Quebec on the date under review, when the index was, however, many points lower. Logging was seasonally inactive, and trade and transportation also afforded less employment. On the other hand, manufacturing reported considerable improvement, especially in the leather, textile and iron and steel groups, and increased employment was also indicated in construction. Statements were tabulated from 1,832 firms, whose payrolls aggregated 232,336 employees, as against 230,957 at the beginning of February.

*Ontario.*—Lessened activity was registered in Ontario, where the 3,463 co-operating establishments reduced their labour forces by 3,696 persons, bringing them to 342,421 on March 1. The situation was not so favourable as that noted on the same date last year, when the losses recorded were on a smaller scale. Iron and steel and textiles reported considerable recovery, and leather, food, clay, glass and stone, and nonferrous metal factories, railway construction and services were more active

than on February 1; highway construction however, reported decided decreases, while smaller reductions were indicated in pulp and paper, musical instrument and some other factories, and in trade, transportation, telephonic communication, logging and building construction.

*Prairie Provinces.*—As is customary in the late winter, there was a contraction in the Prairie Provinces on March 1; this involved a larger number of workers than that recorded on the same date in 1931, when the index number was higher than on the date

aggregated 63,753 persons, as compared with 62,851 in the preceding month. The index was lower than on March 1, 1931, when no general change had been recorded.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

Employment declined in Ottawa, Windsor and the adjacent Border Cities, Winnipeg and Vancouver; in Toronto, practically no change was indicated, while the trend was favourable in Montreal, Quebec City and Hamilton.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

under review. Statistics were tabulated from 1,119 firms with 107,626 employees, compared with 111,427 in their last report. Manufacturing, notably of lumber and iron and steel products, registered a moderate increase, and logging was also rather brisker, while coal mining, transportation, trade and construction showed declines, those in the last named group being most extensive.

*British Columbia.*—Manufacturing, particularly of beverages and iron and steel products, recorded a small gain, and logging and highway construction also afforded greater employment. On the other hand, transportation trade and mining showed decreases. The working forces of the 757 co-operating employers

*Montreal.*—Additions to staffs were reported in Montreal, chiefly in textile and leather factories and in transportation and construction, while trade was not so active. Statements were tabulated from 1,050 firms employing 131,777 workers, as compared with 128,342 in the preceding month. The tendency on March 1, 1931, was also upward, but the index then was higher.

*Quebec.*—Manufacturing afforded more employment, and transportation was also rather brisker, while other industries, on the whole, recorded only small changes. The working forces of the 136 co-operating employers totalled 12,313 persons, compared with 12,162 on February 1, 1932. The index was lower

than on the same date in 1931, when a greater gain had been indicated.

*Toronto.*—The food, leather, textile, lumber and construction groups showed increased activity, but there was a considerable decrease in printing and publishing plants, and in trade, so that there was practically no general change in the city as a whole. Returns were received from 1,148 firms, employing 115,170 workers at the beginning of March. Improvement had been indicated on March 1 of last year, when the index was higher than on the date under review.

*Ottawa.*—Employment in Ottawa decreased, chiefly in construction, although manufacturing was also quieter. The 158 co-operating em-

ployers reported a total payroll of 12,171 on the date under review, compared with 13,197 on February 1. The index was lower than at the beginning of March, 1931, when an advance had been noted.

*Hamilton.*—Slight improvement was reported in Hamilton, especially in the manufacturing and construction divisions. An aggregate payroll of 28,518 persons was reported by the 231 firms whose returns were tabulated, and who employed 28,467 in their last report. Curtailment had been recorded on the same date of last year, but the level of employment then was higher.

*Windsor and the adjacent Border Cities.*—A further decline was indicated in the Border

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100).

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Mar. 1, 1921.....	89.1	101.8	84.6	91.8	90.4	77.5

Relative Weight of Employment by Districts as at Mar. 1, 1932.....	100.0	7.8	28.7	42.3	13.3	7.9

Cities, almost entirely in construction, in which the completion of certain unemployment relief works caused the release of a large number of workers. On the other hand, manufacturing, especially in automobile factories, showed considerable improvement. Data were received from 138 employers with 10,306 workers, or 200 fewer than on February 1. Employment was slacker than at the beginning of March, 1931, when reductions had also been recorded.

*Winnipeg.*—There was a decrease in Winnipeg, where 372 firms reported 36,076 employees, as against 36,819 in the preceding month. The shrinkage was largely in construction and trade, while manufacturing was more active. Employment was in less volume

than on March 1 of last year, when improvement had been registered.

*Vancouver.*—Manufacturing, as a whole, recorded a small gain in Vancouver, in spite of losses in lumber works, but trade, construction and transportation showed curtailment, so that there was a reduction of 643 persons in the payrolls of the 327 co-operating firms, who had 27,310 employees. Very little change had been indicated on the same date of a year ago, when the index was higher.

Index numbers of employment by cities are given in Table II.

### Manufacturing

The trend of employment in this group was upward according to statistics furnished by

**NOTE.**—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Cities as at Mar. 1, 1932...	16.3	1.5	14.2	1.5	3.5	1.3	4.4	3.4

4,751 manufacturers employing 429,638 operatives, as compared with 424,109 at the beginning of February. The most pronounced recovery took place in textile factories, but iron and steel also showed important seasonal gains, and considerably increased activity was recorded in leather, lumber, food, non-ferrous metal and beverage factories. On the other hand, pulp and paper, electrical apparatus and musical instrument works were slacker. The general improvement in manufactures was not quite so great as on March 1, 1931, although it exceeded the advance reported on the same date in 1930.

*Animal Products, Edible.*—Employment in this industry showed a small decline, con-

trasting with the increase recorded on the same date last year. The index number stood at 91.6, as compared with 95.0 on March 1, 1931. The working forces of the 193 reporting establishments aggregated 16,226 persons, as compared with 16,370 in the preceding month. The reduction occurred largely in dairies.

*Leather and Products.*—There was considerable improvement in employment in this industry at the beginning of March, according to statistics from 245 manufacturers, whose staffs aggregated 18,207 persons, compared with 17,554 on February 1. Gains were reported in Quebec and Ontario. A larger increase had been noted on the corresponding date a year ago, but the index number then was only

**NOTE.**—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review

fractionally higher than on the date under review.

*Lumber and Products.*—Improvement was indicated in sawmills, container, vehicle and other wood-using industries, while furniture factories reported considerable curtailment.

Statements were tabulated from 738 employers, whose staffs totalled 29,993 workers, compared with 29,733 in the preceding month. The tendency was favourable in the Maritime and Prairie Provinces and Quebec, but small decreases were registered in Ontario and

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	Relative weight	Mar. 1, 1932	Feb. 1, 1932	Mar. 1, 1931	Mar. 1, 1930	Mar. 1, 1929	Mar. 1, 1928	Mar. 1, 1927

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

British Columbia. The index number was lower than on March 1, 1931, although little general change had then been reported.

*Plant Products, Edible.*—An increase was recorded in the edible plant product group, chiefly in the sugar and syrup and bread and bakery divisions. The firms making returns to the Dominion Bureau of Statistics, 381 in number, had 26,301 workers in their employ, or 455 more than at the beginning of February. Ontario showed most of the gain, but the trend was generally upward except in Quebec. Improvement had also been recorded at the beginning of March last year, when the index number stood at 97·6, compared with 93·2 on the date under review.

*Pulp and Paper Products.*—As on March 1, 1931, there was a falling off on the date under review, chiefly in the pulp and paper and printing and publishing divisions, while paper products showed improvement. A combined working force of 52,616 persons was reported by 559 co-operating manufacturers, who had 53,623 employees on February 1. The situation was not so favourable as in the early spring of 1931, when rather greater curtailment had been noted. The largest decline on the date under review took place in Quebec, but there were reductions in all provinces.

*Rubber Products.*—Very little change in employment was recorded in rubber factories, 44 of which employed 11,602 workers, as compared with 11,579 in their last report. The index number was lower than on March 1, 1931, when a decline had been indicated.

*Textile Products.*—Garment, cotton, woollen, silk and knitting factories registered increases which involved a very much larger number of employees than that reported on March 1, 1931. The level of employment then, however, was rather higher. The payrolls of the 796 co-operating establishments aggregated 83,992 persons, as compared with 80,719 on February 1. Considerable improvement was registered in Quebec and Ontario, while elsewhere the fluctuations were comparatively small.

*Tobacco, Distilled and Malt Liquors.*—Gains in employment were noted on March 1 in distilled and malt liquor factories, while other divisions showed only slight changes. The index number in the tobacco and beverage group, standing at 120·9, was over six points higher than on the same date a year ago. Data were received from 149 firms employing 15,598 workers, or 197 more than in their last report.

*Clay, Glass and Stone Products.*—Activity decreased in building material plants, in which the situation was not so good as on the same date in 1931. Statements were compiled from 180 manufacturers with 8,141 employees, as against 8,258 in the preceding month. Practically all the loss took place in the stone division.

*Electric Current.*—Employment in plants producing electric power showed a slight gain, according to the 91 co-operating firms who employed 14,182 workers, compared with 14,133 on February 1. There were declines in the Maritime and Prairie Provinces, with slight improvement in Quebec, Ontario and British Columbia. The index number, at 116·0, was 2·4 points lower than on March 1, 1931, when curtailment had been reported.

*Electrical Apparatus.*—The trend of employment was downward in electrical appliance factories, 86 of which reduced their payrolls by 222 persons to 13,639 on the date under review; Ontario and Quebec registered most of the loss. Greater curtailment had been indicated at the beginning of March, 1931, but the index number was several points higher.

*Iron and Steel Products.*—Continued advances were reported in the iron and steel industry, in which employment was, however, in smaller volume than in the early spring of 1931. Automobile and railway car shops registered the greatest increases, but there was also an upward movement in agricultural implement, wire, tool and heating appliance factories. Returns were tabulated from 754 establishments having 97,374 persons in their employ, or 1,972 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted except in the Maritime Provinces.

*Non-Ferrous Metal Products.*—Lead, tin, zinc and copper plants showed heightened activity, while other non-ferrous metal plants reported little general change; 127 firms had 14,815 workers on their payrolls, as against 14,471 at the beginning of February. The additions to staffs were made chiefly in Quebec and Ontario, while there was a slight loss in British Columbia. The level of employment was lower than on March 1, 1931, although the gains then indicated were smaller.

*Mineral Products, n.e.s.*—Statistics tabulated from 99 employers showed practically no change in their forces of 11,372 workers. Improvement had been recorded on the corresponding date a year ago, when the index number was higher.

### Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 227 firms had 16,481 men in their employ, or 2,301 fewer than in their last report. The decline involved a much smaller number of workers than that recorded at the beginning of March a year ago, when the index was, however, many points higher.

### Mining

*Coal.*—Employment in the Western coal fields showed a seasonal falling-off, which involved the release of fewer workers than that indicated on March 1, 1931, when the index number was some five points higher. Eighty-one operators reduced their labour forces from 25,932 persons on February 1, to 25,035 at the beginning of March, 1932.

*Metallic Ores.*—There was a small decline in employment in this group on the date under review. Data were received from 61 mines employing 15,744 workers, as against 15,815 at the beginning of February. The situation was not quite so good as on March 1, 1931, when an advance had been recorded.

*Non-Metallic Minerals (Other than coal).*—A considerable increase was registered in these industries, according to statistics from 73 employers having 4,636 persons on their payrolls, compared with 4,282 in the preceding month. Little change had been noted on March 1 of a year ago, but the index was then higher.

### Communications

Reductions in personnel were indicated on telephones and telegraphs; returns were received from 66 companies and branches with 24,701 employees, compared with 25,241 in the preceding month. Curtailment had also been registered on March 1, 1931, when the index was higher.

### Transportation

*Street Railways and Cartage.*—Statistics were tabulated from 165 employers in this division, whose staffs included 22,519 persons, as compared with 22,696 at the beginning of February. Very little change had been noted on the same date in 1931, but the volume of employment was then slightly greater.

*Steam Railways.*—Continued but smaller reductions were registered in steam railway operation, from which 1,576 workers were released by the 101 co-operating companies and divisional superintendents, on whose payrolls were 62,035 persons. A loss had also been indicated on March 1 last year, but the index number was then higher. Declines were noted on the date under review in all provinces.

*Shipping and Stevedoring.*—There was very little general change in the shipping and stevedoring group, in which employment was slacker than on March 1, 1931; on the date under review, 86 employers reported a staff of 11,829 persons. Improvement around the Quebec and Ontario ports was offset by losses in the Maritime Provinces and British Columbia.

### Construction and Maintenance

*Building.*—As on the same date last year, there was a falling-off in building activities at the beginning of March, in which all provinces shared. The 625 contractors furnishing data throughout the Dominion had 21,516 employees, as against 23,123 on February 1. The level of employment was considerably lower than in the early spring of 1931.

*Highway.*—Shrinkage in employment involving a larger number of men than on the corresponding date in 1931 was indicated in this group on March 1, 1932, when 312 employers reported 48,070 workers, as compared with 55,568 on February 1. There were contractions in the Maritime and Prairie Provinces and Ontario, while gains were indicated in Quebec and British Columbia. Employment in this group was better than on March 1 in any other year on record, the index slightly exceeding that of the same date in 1931, and being considerably higher than in the late winter of any earlier year of the record. That this was so, was due to the unemployment relief works being carried on throughout the Dominion.

*Railways.*—Employment on steam railway construction and maintenance showed an increase, according to data received from 34 companies and divisional superintendents employing 24,556 persons, or 903 more than at the beginning of February. There were advances in all provinces except British Columbia. A small gain had been noted at the beginning of March in 1931, when the index was higher.

### Services

Additions to staffs were indicated in the service group, in which 287 establishments reported a staff of 21,672, as compared with 21,268 on February 1. Activity was less than in the same month of 1931, when very little general change had been reported.

### Trade

Retail and wholesale trade continued to release employees; there was a seasonal decrease of 2,569 in the personnel of the 840 firms furnishing data, who had 81,242 employees.

The index stood at 113·6 on March 1, 1932, compared with 122·0 at the beginning of March, 1931, when a smaller loss had been recorded.

Tables

Index numbers of employment by economic areas, leading cities and industries are given

in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

(2) Unemployment in Trade Unions at the Close of February, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are

from a total of 1,819 labour organizations with 183,159 members. Conditions, however, were less favourable than in February a year ago, when 15·6 per cent of the membership involved was out of work. Influencing the situa-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The curtailment of employment which had been in evidence among local trade unions since the beginning of September last year with steadily increasing impetus showed some slight reaction during February, the percentage of idleness standing at 20·6 in contrast with 22·0 per cent in January. The February percentage was based on the returns received

tion to a considerable extent in February was the seasonal resumption of activity in the garment trades, particularly in Quebec, and in Nova Scotia the coal mines showed substantial improvement. In New Brunswick and British Columbia also the trend of activity was upward, although the gains were slight. On the contrary, Ontario, Manitoba, Saskatchewan and Alberta unions reported declines in activity of minor importance. The percentages of unemployment in all provinces exceeded those reported in February, 1931, Quebec and Ontario unions particularly, showing contractions involving the greatest number of members, while in New Brunswick also noteworthy recessions occurred.

Unemployment statistics in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. Montreal unions reported an appreciable gain in employment from January, garment workers in that city showing a much larger number of their members at work than in the preceding month, and in Halifax, Edmonton and Winnipeg the trend of activity was favourable, though the changes were nominal only. On the other hand, substantial losses in employment were recorded by Regina unions, and in Toronto more moderate recessions occurred. Employment in Saint John and Vancouver unions also eased off slightly. With the exception of Regina all cities used in this comparison registered a

lesser employment volume than in February, 1931, Saint John unions especially showing pronounced contractions of activity while the improvement recorded in Regina was very slight. Toronto, Montreal and Vancouver also registered a large drop in the volume of work available from February last year and in Winnipeg and Edmonton declines on a much smaller scale were noted. The situation for Halifax unions was practically unchanged from February, 1931.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1926, to date. The curve which has extended consistently upward since the close of August last year showing a steadily increasing unemployment volume changed its course in February, the projection being slightly downward from January and indicative of some improvement in employment conditions. The curve during the month reviewed paralleled its course of February, 1931, when the trend was also downward, though the level of activity as shown by the curve was considerably reduced from February last year.

Reports were received at the close of February from 486 unions in the manufacturing industries, with 51,475 members, 17.4 per cent of whom were idle on the last day of the month, contrasted with percentages of 21.4 in January and 10.6 in February, 1931. The deciding factor in this better situation reported from January was the continued and more extensive improvement in the Quebec garment trades which, while still indicating, considerable short time were much busier than in the preceding month. Gains in activity were registered also by cigar makers, wood, leather, fur and glass workers, which, however, affected few members. Operations for pulp and paper makers were largely restricted from January, and among textile workers employment showed a noteworthy drop. The iron, steel and printing trades indicated a somewhat lower level of activity, as did metal polishers and general labourers. Employment in the garment and textile trades was on a larger scale than in February, 1931, and minor gains occurred among cigar makers, glass workers and bakers. The majority of the trades, however, reported recessions from February a year ago, those indicated among iron and steel workers being particularly noteworthy, though marked declines also were recorded by pulp and paper makers, printing tradesmen, wood, hat and cap workers, general labourers and metal polishers.

Activity for coal miners was at a higher level during February than in the preceding month, according to the returns tabulated from

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

54 unions embracing a membership of 19,554 persons. Of these, 1,353 or 6.9 per cent were idle on the last day of the month, compared 12.3 per cent in January. The improvement over January was entirely confined to the coal fields of Nova Scotia, while in Alberta unemployment showed a slight increase and in British Columbia the same situation prevailed in both months. Coal mining reported little change, on the whole, from February, 1931, when 6.2 per cent of unemployment was recorded, the tendency, however, being towards lessened activity, Nova Scotia, Alberta and British Columbia unions all showing slight losses in available employment during the month reviewed.

Curtailment in building and construction operations was again in evidence during February and with increasing force, midwinter slackness together with the existing general depression causing an unemployment percentage of 65.3, contrasted with 63.8 per cent of idleness in January. The February percentage was based on the reports received from 258 unions of building tradesmen, including 25,095 members, 16,398 of whom were without employment on the last day of the month. Conditions for painters, decorators and paper-hangers showed decided improvement from January, and among granite and stone cutters a somewhat greater volume of activity was recorded. On the other hand, bricklayers, masons and plasterers reported the most substantial declines in employment from January, and among bridge and structural iron workers, carpenters and joiners, plumbers and steam-fitters and tile layers, lathers and roofers recessions of more moderate proportions were shown. The employment tendency for electrical workers and hodcarriers and building labourers was also less favourable, though the changes were but nominal. Heavy increases in slackness were reported in the building trades from February last year when 47.1 per cent of the membership involved was without work, all tradesmen with the exception of hodcarriers and building labourers reporting a substantial slump in activity while among these workers nominal declines in employment only were shown.

Little variation in employment conditions from the previous month was indicated in the transportation industries during February, the 767 unions making returns, with 62,916 members reporting an unemployment percentage of 13.5, contrasted with 13.2 per cent in January. The trend of activity for steam railway employees, whose returns cover about 81 per cent of the entire group membership re-

porting, and navigation workers was slightly less favourable than in January, while among teamsters and chauffers, and street and electric railway employees nominal improvement occurred. Steam railway employees and navigation workers were, as in the previous comparison, largely responsible for the unemployment increases shown from February, 1931, when 10.4 per cent of idleness was registered in the transportation industries as a whole. The situation for street and electric railway employees remained approximately the same in both months compared, while among teamsters and chauffers the employment tendency was upward.

Retail clerks were more busily engaged during February than in the preceding month, the 3 unions from which reports were tabulated, with a total of 1,139 members, showing .7 per cent of inactivity contrasted with an unemployment percentage of 4.5 in January. Conditions were also somewhat better than in February, 1931, when 1.5 per cent of the members reported were without employment.

A lower level of activity was maintained by civic employees during February than in either the previous month or in February, 1931, according to the reports tabulated from an aggregate of 71 organizations with 7,873 members. Of these 497, or 6.9 per cent, were idle on the last day of the month, contrasted with percentages of 2.7 in January and 1.9 in February last year.

From unions in the miscellaneous group of trades 132 returns were tabulated at the close of February, comprising a membership of 5,746 persons, 1,181 or 20.6 per cent, of whom were unemployed on the last day of the month, contrasted with 19.5 per cent in January. Marked gains in employment were recorded by unclassified workers from January, which were, however, slightly more than offset by the recessions apparent by the hotel and restaurant and theatre and stage employees, barbers, and stationary engineers and firemen. Compared with the situation in the miscellaneous group of trades during February, 1931, when 15.7 per cent of idleness was recorded, unclassified workers, as in the previous comparison, were much better employed during the month reviewed. Pronounced curtailment of activity however, was reflected by stationary engineers and firemen, and the situation for theatre, stage, hotel and restaurant employees, and barbers also declined.

Some lessening of the unemployment volume was shown by lumber workers and loggers during February, as compared both with the preceding month and with February

latter half of the month. At the end of February, each level was nearly 13 points below that shown at the close of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 61.3 and 58.9 during the first and the second half of February, 1932, in contrast with the ratios of 69.9 and 71.7 during the corresponding periods in 1931. The ratios of placements to each 100 applications during the periods under review were 60.0 and 57.4 as compared with 68.9 and 70.2 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1932, was 1,338, as compared with 1,262 during the preceding month and with 2,159 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,223, as compared with 2,311 in January and with 3,052 during February, 1931.

The average number of placements made daily by the offices of the Service during February, 1932, was 1,306, of which 394 were in regular employment and 912 in work of one week's duration or less as compared with a total daily average of 1,229 during the preceding month. Placements in February last year averaged 2,120 daily, consisting of 466 placements in regular and 1,654 in casual employment.

During the month of February, 1932, the offices of the Service referred 33,892 persons to vacancies and effected a total of 32,633 placements. Of these, the placements in regular employment were 9,849, of which 7,149 were of men and 2,700 of women, while placements in casual work totalled 22,784. The number of vacancies reported by employers was 27,740 for men and 5,686 for women, a total of 33,426, with applications for work numbering 55,558, of which 46,084 were from men and 9,474 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	108,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769

1931.....	175,632	295,876	471,508
1932 (2 months).....	21,921	41,433	63,354

## NOVA SCOTIA

There was a gain of over 11 per cent in the number of positions offered through Employment Offices in Nova Scotia during February when compared with the preceding month, and of nearly 18 per cent in comparison with the corresponding month last year. Placements also were nearly 8 per cent higher than in January and over 21 per cent above February, 1931. The increase in placements over February last year was due to gains under construction and maintenance, as the changes in all other industrial divisions were small. The largest declines were reported in manufacturing and logging. Industrial divisions in which most of the placements were effected during the month were: construction and maintenance, 181; trade, 38; and services, 351, of which 210 were of household workers. There were 60 men and 72 women placed in regular employment during the month.

## NEW BRUNSWICK

During February orders received at Employment Offices in New Brunswick called for nearly 7 per cent less workers than in the preceding month, and nearly 45 per cent less than during the corresponding month of last year. Placements were over 6 per cent fewer than in January and nearly 45 per cent less than in February, 1931. Substantial declines in placements under construction and maintenance and services in a large measure accounted for the loss in comparison with February last year, although fewer placements were also made in transportation and trade. Manufacturing showed a slight gain, while the changes in other divisions were nominal only. Placements by industrial divisions included: manufacturing, 35; construction and maintenance, 79; and services 429, of which 311 were of household workers. During the month regular employment was obtained for 57 men and 39 women.

## QUEBEC

Orders received at Employment Offices in the Province of Quebec during February called for over 9 per cent more workers than in the preceding month and nearly 3 per cent more than during the corresponding month of last year. There was an increase also of over 6 per cent in placements when compared with January, and of over 2 per cent in comparison with February, 1931. Increased placements in services and construction and maintenance were responsible for the gains over February last year. The increases, however, were partly offset by declines in logging and mining and somewhat smaller reductions in manufacturing

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF FEBRUARY, 1932

\*21 placements effected by offices since closed.

and trade. Placements by industrial divisions included: manufacturing, 52; logging, 36; construction and maintenance, 186; trade, 31; and services, 725, of which 604 were of household workers. There were 339 men and 560 women placed in regular employment during the month.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during February, were nearly 6 per cent better than in the preceding month but almost 40 per cent less favourable than during the corresponding month last year. Similar percentages of change were recorded in placements under both comparisons. Placements on relief work were about 50 per cent less than during February, 1931, which accounted for the large decline under this comparison. There were, in addition, fewer placements in services, manufacturing and logging, but a gain was recorded in trade. Small changes only were reported in the other industrial groups. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 524; logging, 371; farming, 244; transportation, 56; construction and maintenance, 13,426; trade, 444; and services, 2,529, of which 1,610 were of household workers. Placements in regular employment numbered 2,545 of men and 1,071 of women.

#### MANITOBA

There was a decline of nearly 10 per cent in the number of positions offered through Employment Offices in Manitoba during February when compared with the preceding month and of about 52 per cent in comparison with the corresponding month of last year. Placements also were 12 per cent less than in January and 51 per cent less than in February, 1931. There was a large decrease in the number of placements made on road construction relief work, when comparison is made with February of last year, which accounts for the adverse change under this comparison. Smaller losses were shown in services and trade. These declines were offset in part by gains in farming and logging. Farm placements, which were quite heavy, were made under the Farm Relief plan. Placements by industrial divisions included: manufacturing, 21; logging, 123; farming, 740; construction and maintenance, 1,911; trade, 40; and services, 810, of which 696 were of household workers. During the month 1,754 men and 333 women were placed in regular employment.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at Employment Offices in

Saskatchewan during February, was nearly 21 per cent less than in the preceding month and over 34 per cent below the corresponding month of last year. There was a decline also in placements of over 10 per cent when compared with January and of nearly 35 per cent in comparison with February, 1931. Although a large number of placements were again made on road construction in relief of unemployment most of the decline from February of last year was due to a reduction in placements of this kind. There were also fewer bush placements. These declines were partly offset by gains in farm placements under the Farm Relief scheme and also by small increases in manufacturing and trade. Placements by industrial divisions included: manufacturing, 57; farming, 363; construction and maintenance, 558; trade, 63; and service, 599, of which 403 were of household workers. Regular employment was procured for 607 men and 281 women.

#### ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during February were nearly 26 per cent better than in the preceding month, but 24 per cent less favourable than in the corresponding month of last year. Similar percentages of change were recorded in placements under both comparisons. Placements in relief of unemployment on road construction, while again quite heavy, were not as numerous as in February, 1931, which accounted for the decline under this comparison. Bush placements were also considerably less and there was a small decline in manufacturing. Gains were shown in services, mining and farming. Industrial divisions in which most of the placements were made during the month included: manufacturing, 23; logging, 60; farming, 247; mining, 100; construction and maintenance, 3,280; and services, 687, of which 297 were of household workers. During the month 1,043 male and 205 female applicants were placed in regular employment.

#### BRITISH COLUMBIA

There was a gain of nearly 31 per cent in the number of positions offered in British Columbia during February when compared with the preceding month, and of over 7 per cent in comparison with the corresponding month of last year. Placements also were 29 per cent higher than in January and over 7 per cent in excess of February, 1931. Construction and maintenance was the only industrial division to show any increase in placements over February of last year, due to work provided in relief of unemployment on road

construction, and accounted for the gain for the province as a whole under this comparison. This increase was, however, largely offset by reduced placements in logging and services with minor declines in farming, transportation and manufacturing. Industrial groups in which most of the placements were effected during the month were: manufacturing, 27; farming, 50; construction and maintenance, 2,376; trade, 24; and services, 467, of which 326 were of household workers. During the month 744 men and 139 women were placed in regular employment.

#### Movement of Labour

During the month of February, 1932, the offices of the Employment Service of Canada made 9,849 placements in regular employment, 3,272 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter 227 were granted the Employment Service reduced transportation rate, 147 going to points within the same province as the despatching office and 80 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Ontario 71 persons took advantage of the Employment Service reduced transportation rate during February, 69 of whom were destined to centres within the province. Of these 61 were bush workers for the Fort William, Port Arthur and Fort Frances zones travelling on certificates secured at Fort William and Port Arthur. The Sudbury office transferred one teamster to Ottawa and four highway construction workers and one pulp cutter within its own zone, while from Niagara Falls one bridge construction worker proceeded to Timmins. To a point within its own zone Port Arthur despatched one cook. The two persons going outside the province were miners shipped from Cobalt to Amos.

The labour movement, both within and from the Province of Manitoba during February, originated at Winnipeg and comprised the transfer of 95 workers, 18 of whom went within the province and 77 to points in other provinces. Provincially, one cook was con-

veyed to Dauphin, one farm housekeeper to Brandon and 8 farmhands, one farm domestic, 5 mine workers, one cook and one porter to employment within the Winnipeg zone. Of the workers travelling outside the province 66 were bound for the Port Arthur zone, including 54 bush workers, 10 highway construction teamsters, one farm hand and one rockman. In addition, Prince Albert received one school teacher and to various Saskatchewan rural points were despatched 9 farmhands and one farm domestic.

Saskatchewan transfers at the reduced rate in February numbered 11, all provincial, the Regina office being instrumental in the despatch of 2 farmhands to Saskatoon and of 4 teachers and one farmhand within its own zone. From Saskatoon also, one farm domestic went to North Battleford and two farmhands and one farm domestic to employment within the Saskatoon zone.

Business transacted by Alberta offices in February involved an issue of 44 reduced transportation rate certificates, 43 of which were to provincial points. Of these 36 were issued at Edmonton to 16 farmhands, 14 mine workers, 2 farm domestics and 4 bushworkers proceeding to employment within the area covered by the Edmonton office. From Calgary the movement was of agricultural labour; 3 farmhands travelling to Edmonton, one farmhand to Drumheller and 3 farmhands within the Calgary zone. Journeying outside the province one farmhand secured a certificate at Edmonton for transportation to Saskatoon.

Workers who availed themselves of the reduced transportation rate in British Columbia during February numbered 6, all of whom secured their certificates at Vancouver. From this centre 2 mine workers and one hotel cook were conveyed to Penticton, one carpenter to Kamloops, one watchmaker to Nelson and one farmhand to a point within the Vancouver zone.

During February 227 persons profited by the Employment Service reduced transportation rate, of whom 125 travelled by the Canadian National Railways, 98 by the Canadian Pacific Railway, 2 by the Timiskaming and Northern Ontario Railway, one by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during February, 1932

The value of the building represented by the permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was lower by \$183,332 or 6.6 per cent than in the preceding month, and was also

less by \$3,817,062 or 59.7 per cent than in February of last year; the total stood at \$2,578,597 during February, 1932, as compared with \$2,761,929 in January, 1932, and \$6,395,659 in February, 1931.

Some 50 cities furnished detailed statistics, showing that they had granted over 300 permits for dwellings valued at about \$1,100,000,

and more than 800 permits for other buildings, estimated to cost in excess of \$1,400,000. In addition, an engineering project, valued at \$20,495, was reported in Brantford. In January, authority was given for the erection of some 300 dwellings and 800 other buildings, estimated at approximately \$1,200,000 and \$1,300,000, respectively, while an engineering project, valued at \$45,654 was reported in Brantford.

New Brunswick, Ontario, Saskatchewan and Alberta reported increases in the value of the permits issued as compared with January, 1932; the largest gain, of \$120,494, took place in Ontario. Of the declines in the remaining provinces, those of \$132,611 or 14.3 per cent in Quebec, and \$129,635 or 34.4 per cent in British Columbia were most pronounced.

As compared with February, 1931, all provinces recorded declines, that of \$1,494,239 or 85.8 per cent in British Columbia being most marked.

Of the larger cities, Toronto recorded an increase in the value of the permits issued as compared with January, 1932, but a reduction as compared with February, 1931. In Montreal, Winnipeg and Vancouver, there were decreases in both comparisons. Of the other cities, the following recorded increases in the value of the building authorized during February as compared with January, 1932, and February, 1931:—Moncton, Shawinigan Falls, Sherbrooke, Galt, Guelph, Kitchener, Ottawa, Peterborough, St. Catharines, Sault Ste. Marie, East Windsor, Brandon and Saskatoon.

*Cumulative Record for First two Months, 1932.*—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits issued in first two months (1926=100)	Average indexes of wholesale prices of building materials in first two months (1926=100)
	\$	\$		
1932.....	2,578,597	5,340,596	45.0	79.4
1931.....	6,395,659	14,787,115	124.8	83.8
1930.....	8,919,078	16,136,475	136.1	96.8
1929.....	10,465,330	18,882,210	159.2	99.6
1928.....	10,638,358	18,034,925	152.1	96.4
1927.....	7,638,176	13,314,713	112.3	97.1
1926.....	7,139,549	11,859,083	100.0	102.4
1925.....	5,902,118	11,349,388	95.7	103.2
1924.....	4,093,800	8,554,379	72.1	112.3
1923.....	5,679,671	9,819,169	82.8	110.1
1922.....	4,738,105	8,064,642	68.0	108.3
1921.....	3,683,359	6,278,923	52.9	140.5
1920.....	6,156,287	10,173,311	85.8	137.5

<sup>1</sup> Report not received.

100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

The aggregate for the first two months of 1932 was lower than in the same months of

1931 and earlier years of the record, but it should be noted that the wholesale costs of building materials were also considerably lower in the first two months of the present year than in the months January, February of any other year since 1920.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. The summary showing the employment situation during February, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

There was a slight improvement in employment during February. There were reductions in the numbers recorded as unemployed in the cotton, woollen and worsted, and silk industries, and in textile bleaching and finishing, in metal goods manufacture, in the clothing industries (except boot and shoe manufacture), in the paper, pottery and building industries, and in shipping service. On the other hand, the numbers unemployed increased in coal mining and in the jute industry.

Although there was a slight decline in the numbers recorded as unemployed in all divisions except the North Eastern, employment was still very slack in the Southern divisions of England and very bad in all other areas.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at February 22, 1932 (including those temporarily stopped as well as those wholly unemployed), was 22.0, as compared with 22.4 at January 25, 1932, and with 21.7 at February 23, 1931. The percentage wholly unemployed at February 25, 1932, was 18.2, as compared with 18.4 at January 25, 1932, while the percentage temporarily stopped was 3.8, as compared with 4.0. For males alone, the percentage at

February 22, 1932, was 25.0, and for females 14.2; at January 25, 1932, the corresponding percentages were 25.1 and 15.4.

At February 22, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,112,927 wholly unemployed, 486,599 temporarily stopped, and 101,647 normally in casual employment, making a total of 2,701,173. This was 27,238 less than a month before, but 83,515 more than a year before. The total included 2,150,340 men, 72,489 boys, 422,836 women and 55,508 girls.

The 2,112,927 wholly unemployed included approximately 914,832 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years, and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 872,785 insured persons with applications for transitional payments; 197,866 insured persons not in receipt of insurance benefit or transitional payments, and 127,444 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at February 22, 1932, was 2,763,667.

### United States

The Bureau of Labour Statistics of the United States Department of Labour reports the changes in employment and earnings in February, 1932, as compared with January, 1932, based on returns made by 60,252 establishments in 16 major industrial groups, having in February 4,542,751 employees, whose combined earnings in one week were \$97,759,053. The combined totals of these 16 groups show a decrease of 0.3 per cent in employment and an increase in earnings of 0.1 per cent.

Three of these industrial groups—manufacturing, hotels, and canning—reported increases in employment of 1.2, 1.3, and 5.9 per cent, respectively, and increases in earn-

ings of 2.1, 0.1, and 2.9 per cent, respectively. Three other groups—bituminous coal mining, telephone and telegraph, and crude petroleum producing—reported increases in payrolls of 0.1, 0.5, and 0.9 per cent, respectively, coupled with decreases in employment. The remaining 10 groups—anthracite mining; metalliferous mining; quarrying and non-metallic mining; power, light, and water; electric-railroad operation; wholesale trade; retail trade; laundries; dyeing and cleaning; and building construction had decreases in both items.

In a statement in its official publication the *Monthly Survey of Business* of March 19, the American Federation makes the following summary of unemployment among trade union members during February:

"Our estimate shows 8,300,000 still out of work at the first of February. Trade union weighted figures were: January, 23.1 per cent unemployed; February, 23.0 per cent. Nevertheless it is encouraging to note that since October unemployment has increased no more than is normal at this season."

## EMPLOYMENT CONDITIONS IN THE FISHING INDUSTRY IN GREAT BRITAIN

THE conditions of the employment of fishermen in Great Britain are described in the report of a special committee on the fishing industry which was appointed in 1929. An outline of this report, recently published, is given in the *Ministry of Labour Gazette*, March, 1932. The number of persons directly employed in the industry in Great Britain is stated to be about 59,000, in addition to a large number employed in the preparation and distribution of fish. Of this total about 25,325 are in Scotland. Deep-sea fishing is divided into the white fish and trawling group, and the herrings and drifting group.

While the methods and the rates of remuneration vary at different ports, the general principles governing the remuneration of trawl fishermen are as follows: The skipper and the mate usually receive a fixed proportion of the net earnings of the voyage. These are divided into 14 shares, of which the skipper usually receives  $1\frac{1}{2}$ , and the mate 1 or  $1\frac{1}{4}$ . At some ports they may also receive a bonus in certain cases, and other additions to their share-earnings. The deck and engine-room ratings usually receive a fixed weekly wage, and a share ("poundage") of the net earnings of the voyage; at some ports they also receive certain perquisites.

Herring fishing, unlike trawling, has declined greatly in recent years; the numbers engaged in it are said to have declined from 20,500 in 1914 to probably under 16,000 to-day. The systems of remuneration differ somewhat in England and in Scotland. In England, the owners provide all necessary gear, and the cost of provisions is included in the deductions for expenses made before the crew's share of the proceeds is calculated. From the gross earnings are deducted running expenses, the cost of provisions for the crew, commission to salesmen, and dock dues; and of the

remainder the crew, collectively, receive seven-sixteenths less one-ninth, and the owners nine-sixteenths plus one-ninth.

In Scotland the men invariably own the nets, and in nine cases out of ten the boats as well. From the gross earnings are deducted running expenses, salesmen's commission, and a fixed weekly wage to the engineer, the fireman, and the cook. The residue is divided into three equal shares, which go to the owners of the boat, to the owners of the nets, and to the crew (other than those receiving a fixed weekly wage). Most of the men are members of at least two of these categories; and their shares, although called net earnings, are subject to the further charge of the cost of food, and for those who are part owners of the boat and the nets, the upkeep and insurance of the vessel, and the expenses of tanning and drying the nets.

With the exception of the three members of the crew to whom fixed wages are paid, the men divide the crew's share equally, the skipper, for example, receiving no more than any of the others. The average "crew's share" per man for six months is said to be about £58; but further sums (against which must be set the expenses of upkeep) are received by the joint owners of boats and nets in proportion to their holdings. The "nets share" per man is placed on the average at £55, thus giving a combined sum of £113.

One of the effects of the profit-sharing system is to put all fishermen, other than those in receipt of fixed wages, outside the scope of the Unemployment Insurance Scheme; but recent legislation has enabled the fishermen to participate in the National Health Insurance and the Contributory Pensions Schemes.

The men engaged in inshore fishing are, generally speaking, those who use vessels incapable of working at a distance from port

greater than ten or twelve miles. To a large extent inshore fishing is no more than an occasional occupation. Even in the case of those solely occupied in it, the men may often go much further afield. The boats are owned by one man as a rule, and carry a crew of two or three hands, paid by a share of the catch. The largest are often owned jointly by two men, and the crew may consist of as many as five. Whatever the size of the boat or the method of fishing, they are never long absent from port, but as a rule land their fish every day.

The number of inshore fishermen in England and Wales in 1928, including those only occasionally so occupied, was 12,279, with a further 2,218 who were engaged partly in inshore and partly in deep-sea fishing. It is estimated that the total number declined by about 7,600 between 1913 and 1928. In Scotland there are approximately 10,000 fishermen engaged in the inshore fisheries; of these, a large number fish for herring during part of the year; during the remainder they fish for white fish in inshore waters. About 2,000 men are engaged in the Scottish salmon fisheries.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

- (a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;
- (b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.
- (2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on

in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are general accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the

purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours

as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada,

unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned, and those coming under the "B" groups containing the Fair Wage Clause specified in the "B" conditions, as given above:—

#### DEPARTMENT OF AGRICULTURE

##### *Contract in Group "A" (Construction, etc.)*

Construction of a fox building at the Animal Diseases Research Institute, Hull, P.Q. Name of contractors, Messrs. Edward Brunet & Son, Hull, P.Q. Date of contract, November 14, 1931. Amount of contract, \$4,883. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
		per day per week
Carpenters and joiners.....	\$0 90	8 44
Electricians.....	0 80	8 44
Painters and glaziers.....	0 70	8 44
Plasterers.....	1 00	8 44
Lathers.....	0 75	8 44
Plumbers and steamfitters.....	1 05	8 44
Sheet metal workers.....	1 00	8 44
Labourers.....	0 45	8 44

#### DEPARTMENT OF MARINE

##### *Contract in Group "A" (Construction, etc.)*

Construction of a single screw towing and fire tug for Quebec, 120 ft. by 30 ft. by 14½ ft. Name of contractors, the Davie Shipbuilding & Repairing Co., Ltd., Lauzon, P.Q. Date of

contract, March 16, 1932. Amount of contract \$229,670. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF RAILWAYS AND CANALS

##### *Contract in Group "A" (Construction, etc.)*

Rock filling and construction of a retaining wall and of reinforced concrete deck in connection with carrying West Street, Port Colborne, Ont., over forebay of Old Welland Canal Supply Weir. Name of contractors, Ontario Construction Co., Ltd., St. Catharines, Ont. Date of contract, March 4, 1932. Amount of contract, approximately \$12,366.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 60	8
Carpenters.....	0 70	8
Cable way and dragline operators.....	1 20	8
Truck driver.....	0 45	8
Compressor operators.....	0 50	8
Cement finishers.....	0 60	8
Electricians.....	0 70	8
Concrete mixer operators.....	0 55	8
Firemen, locomotive crane.....	0 45	8
Firemen, stationary.....	0 45	8
Steam hoist or derrick runners.....	0 65	8
Electric hoist runners.....	0 60	8
Locomotive crane operators.....	0 75	8
Labourers.....	0 40	8
Linemen.....	0 60	8
Machinists.....	0 65	8
Powdermen.....	0 45	8
Pump men.....	0 45	8
Riggers.....	0 60	8
Teamsters.....	0 40	8
Welders and burners.....	0 55	8
Plumbers & steamfitters.....	0 70	8
Pile driver engineers.....	0 75	8
Divers.....	1 25	8

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)\**

Construction of an extension to the west breakwater at Matane, P.Q. Name of contractor, Mr. Albani Bouchard, Matane, P.Q. Date of contract, March 14, 1932. Amount of contract, approximately \$34,950. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	
Carpenters.....	0 55	8
Timbermen.....	0 42½	8
Pile driver mechanic.....	0 50	8
Labourers.....	0 35	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8

#### \*Correction

In the last issue, on page 346, in the fair wages schedule inserted in the contract for repairs, etc. to the drill hall at St. Hyacinthe, Quebec, the rate for bricklayers should have read 80 cents instead of 50 cents per hour.

*Contracts in Group "B" (Interior Fittings, etc.)*

Construction and installation of interior fittings in the public building at Penetanguishene, Ont. Name of contractor, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, March 29, 1932. Amount of contract, \$1,648. The "B" labour conditions were inserted in the contract.

Supply and installation of bronze signs required for screens in the long room at the Public Building, Toronto, Ont. Name of contractors, Architectural Bronze & Iron Works of the Canadian Allis-Chalmers Limited, Toronto, Ont. Date of contract, March 21, 1932. Amount of contract, \$420. The "B" labour conditions were inserted in the contract.

Construction and installation of laboratory fittings in the National Research Building, Ottawa, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont.

Date of contract, March 30, 1932. Amount of contract, approximately \$28,663.70. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in the public building at New Liskeard, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, March 30, 1932. Amount of contract, \$1,898. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in the public building, Toronto, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, March 22, 1932. Amount of contract, approximately \$21,679. The "B" labour conditions were inserted in the contract.

Alterations and additions to the interior fittings of the public building at Sudbury, Ont. Name of contractors, Carrington Construction Co., Ltd., Sudbury, Ont. Date of contract, December 12, 1931. Amount of contract, \$3,500. The "B" labour conditions were inserted in the contract.

Supply and installation of the interior fittings on the 4th, 5th, 7th and 8th floors of the public building at Calgary, Alta. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, February 3, 1932. Amount of contract, \$5,333. The "B" labour conditions were inserted in the contract.

Supply and installation of metallic fittings in the public building at Toronto, Ont. Name of contractors, The Office Specialty Mfg. Name Ottawa, Ont. Date of contract, March 19, 1932. Amount of contract, \$12,732. The "B" labour conditions were inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in March, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	\$379 13
<i>Making and repairing rubber stamps, daters, etc.—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	376 57
<i>Making and supplying letter carriers' uniforms—</i>	
R. J. Devlin & Co., Ottawa, Ont.	35 40
Samuel Dorfman, Quebec, P. Q.	1,317 78
Horn Bros. Woollen Co., Ltd., Lindsay, Ont.	3,044 70
<i>Mail Bag Fittings—</i>	
F. W. Carling, Ottawa, Ont.	2,760 00
Pritchard-Andrews Co. of Ottawa, Ltd.	150 80
Ketchum Manufacturing Co., Westboro, Ont.	42 63
<i>Scales—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	159 00
<i>Letter Boxes, etc.—</i>

## Fair Wages Conditions in Harbour Commission Contract

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was notified that the following construction contract was executed by the Saint John Harbour Commissioners under the above-mentioned conditions:—

### Saint John Harbour Commissioners

Reconstruction work at West Saint John, N.B. Name of contractors, the Foundation Company of Canada, Ltd., and the Northern Construction Company and J. W. Stewart, Ltd. Date of contract, August 19, 1931. This work

was done on a cost plus basis and the total expenditure made on the work to February 29, 1932, was \$3,819,491.79. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Crane operator.....	\$0 75	8
Labourers.....	0 40	8
Carpenters.....	0 75	8
Timbermen.....	0 50	8
Riggers.....	0 65	8

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—CARPENTERS AND GENERAL CONTRACTORS' SECTION OF THE TORONTO BUILDERS' EXCHANGE AND THE GENERAL CONTRACTORS' ASSOCIATION OF TORONTO AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 27.

Agreement to be in effect from January 1, 1932, to December 31, 1932, and thereafter subject to certain notice.

The business agent of the union to have access to jobs but not to interfere with work.

Hours: 8 per day with 5-day week.

Overtime: for overtime work done in case of emergency, time and one half for first three hours; all other overtime and work on Saturdays, Sundays and holidays, double time.

Wages for journeymen carpenters: 90 cents per hour and no union member to work for less.

Wages for apprentices to be paid as specified in the Ontario Apprenticeship Act.

For work out of the city, transportation to be paid by employer.

Provision is made for a conciliation board in case of any dispute; no strike or lockout to take place until an international officer of the union and the chairman of the Builders' Exchange have investigated and rendered a decision.

**TORONTO, ONTARIO.—CONTRACTING PLASTERERS' ASSOCIATION AND THE PLASTERERS' LABOURERS ASSOCIATION OF TORONTO (INTERNATIONAL HOD CARRIERS, BUILDING AND COMMON LABOURERS' UNION, LOCAL 781).**

(Note.—The agreement between the Contracting Plasterers' Association and the Operative Plasterers and Cement Finishers' International Association, Local 48, summarized in the LABOUR GAZETTE, February, 1932, page 219, provides for an 8 hour day and 5 day week.)

Agreement to be in effect from December 1, 1931, to April 30, 1933.

Employers agree to recognize the union in settling disputes; union men to be employed when available; proficient men to be allowed to join the union, a maximum initiation fee being stated; a contractor to be allowed to employ unskilled labour when he considers it is required.

Overtime to be paid only when attending plasterers, and to be paid at time and one-half rate; Saturday morning not to be considered as overtime.

Wages for plasterers' labourers: from December 1, 1931, to April 30, 1932, 70 cents per hour; from May 1, 1932, to April 30, 1933, 65 cents.

An arbitration board to be formed to settle all disputes.

**HAMILTON, ONTARIO.—CANADIAN CONSTRUCTION ASSOCIATION, HAMILTON BRANCH, AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 1.**

Agreement to be in effect from December 4, 1931, to May 1, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, November, 1929, page 1284, with the following exceptions:

Hours: the regular hours are unchanged at 8 per day with a 44-hour week, but it is provided that in case of night shifts, 8 hours pay will be given for 7 hours work.

Wages per hour: bricklayers and masons, \$1.10; tilesetters, \$1. (The previous rate for bricklayers was \$1.25.)

Conference may be held on two week's notice to consider further revisions in wages.

**WINDSOR AND VICINITY, ONTARIO.—CERTAIN MEMBERS OF THE GENERAL CONTRACTORS' SECTION AND THE MASONS' SECTION OF THE BUILDERS AND CONTRACTORS' ASSOCIATION OF ESSEX COUNTY AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 6.**

Agreement to be in effect from June 16, 1931, to April 30, 1932, and thereafter from year to year subject to notice.

Employers to notify the union of journeymen required, those signing the agreement to have preference with the union in the supply of bricklayers and masons.

Hours: 8 per day, 4 on Saturdays, a 44-hour week; when three shifts a day are employed, 7 hours to constitute a day's work with 8 hours' pay.

Overtime: all overtime and all work on Saturday afternoons, Sundays and holidays, double time.

Wages for bricklayers and stonemasons: \$1.25 per hour; foremen to receive 10 per cent higher wages than journeymen.

A joint arbitration board to be formed for the settlement of all disputes and no strike or lockout to occur until a dispute has been referred to it.

**WINDSOR AND VICINITY, ONTARIO.—GENERAL CONTRACTORS' SECTION OF THE BUILDERS AND CONTRACTORS' ASSOCIATION OF ESSEX COUNTY AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 494.**

Agreement to be in effect from March 16, 1932, to April 30, 1933, and thereafter from year to year subject to notice.

Union members to be employed when available; the business agent of the union to have access to jobs.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. In case of shift work, men employed on the second or third shifts to work 7 hours and be paid for 8 hours.

Overtime: time and one half for first hour; all other overtime and all work on Sundays and holidays, double time.

Wages for journeymen carpenters: \$1 per hour.

Wages of indentured apprentices: first year 25 per cent of journeymen's rate, second year 35 per cent, third year 45 per cent, fourth year 60 per cent. Fifth year, to be classified as journeymen.

Any disputes or grievances or violation of the agreement to be referred to a conciliation board and no strike or lockout to occur until the matter has been referred to this board.

**WINDSOR AND VICINITY, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 552.**

Agreement to be in effect from March 1, 1932, to February 28, 1933 and thereafter from year to year subject to notice and negotiations.

Provision is made for further employers signing the agreement under certain restrictions.

Only union members to be employed.

Hours: 8 per day with a 5-day week. In case of shift work, 7 hours per day to be worked with 8 hours pay.

Overtime: all overtime and all work on Saturdays, Sundays and holidays, double time, with the exception of emergency work on Saturday morning, which with the consent of the business agent of the union may be paid for at the regular rate.

Wages for journeymen plumbers and steamfitters: \$1 per hour. Foremen to receive 10 cents per hour extra.

For work out of the city, fare and board and travelling time up to 10 p.m. will be paid by the employer.

One apprentice allowed for every five journeymen plumbers or five journeymen steamfitters employed. Any additional help required will be labourers who will not be permitted to install work.

**WINDSOR AND VICINITY, ONTARIO.—SHEET METAL AND ROOFING CONTRACTORS AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL 456.**

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter from year to year subject to notice and negotiations.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1931, page 834, with the following exceptions:

Only union members to be employed, including foremen.

Wages: sheet metal workers \$1 per hour (formerly \$1.12 $\frac{1}{2}$ ); roofers 85 cents (formerly two classes of roofers paid 90 and 75 cents per hour respectively). Ordinary labour remains at 50 cents per hour.

For work out of the city, fare and board and travelling time to be paid by employers.

Hours: the regular hours of work are unchanged at 44 per week.

CALGARY, ALBERTA.—PLASTERING CONTRACTORS' ASSOCIATION AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL 324.

Agreement to be in effect from April 1, 1932, to April 30, 1933. Provision is made for negotiations for a renewal or for a new agreement.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1931, page 711, and May, 1929, page 536, with the following exception:

Wages for operative plasterers: \$1.15 per hour. (The rate previously in effect was \$1.40.)

The regular hours are unchanged at 40 per week.

VANCOUVER, B.C. — GENERAL CONTRACTORS' ASSOCIATION OF VANCOUVER AND THE VANCOUVER, NEW WESTMINSTER AND DISTRICT CARPENTERS' DISTRICT COUNCIL AND THE AMALGAMATED CARPENTERS OF CANADA, VANCOUVER—NEW WESTMINSTER DISTRICT.

Rates of wages and working conditions, to be in effect from April 1, 1932, subject to 90 days' notice followed by further negotiations, were agreed upon by the above parties in conference with the Deputy Minister of Labour for British Columbia and set out in a memorandum.

Hours: 8 per day with a 5-day week, except that on any necessary work, carpenters may work on Saturday morning at the regular rate.

Overtime: time and one-half for first four hours; all other overtime and all work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen carpenters: 87 $\frac{1}{2}$  cents per hour. (The rate previously in effect was \$1.)

Where necessary, a joint committee will be formed to decide questions as to Saturday morning work and such other matters as may arise.

### Service: Public Administration

CALGARY, ALBERTA.—CORPORATION OF THE CITY OF CALGARY AND THE CALGARY FEDERATION OF CIVIC EMPLOYEES AND ITS AFFILIATED UNIONS.

The agreement dated March 1, 1929, which covered civic employees except firefighters and which was summarized in the *LABOUR GAZETTE*, August, 1929, page 927, was renewed for the years 1930 and 1931. A supplementary agreement is now in effect from January 1, 1932, to December 31, 1932, which provides for a reduction in wages and salaries of 4 per cent with this exception: the wages or salary of any married man receiving \$100 per month or less and of any single man or woman receiving \$70 per month or less will not be reduced; those receiving more than these amounts not to be reduced below them.

CALGARY, ALBERTA.—CORPORATION OF THE CITY OF CALGARY AND THE INTERNATIONAL ASSOCIATION OF FIREFIGHTERS, LOCAL 255.

The agreement which was in effect in 1928 and which was summarized in the *LABOUR GAZETTE*, March, 1929, page 335, was renewed from March 1, 1929, with increases in wages of \$5 per month for chauffeurs and firemen with seven years' experience and for lieutenants, captains, mechanics, etc., and increases of \$2.50 per month for fire alarm operators, and was again renewed for the years 1930 and 1931.

On failure to reach an agreement for the year 1932, a conciliation board was formed under the Alberta Labour Disputes Act and the majority report of this board recommended a reduction in wages of 4 per cent for the year 1932 (see page 392).

## AGREEMENTS INVOLVING CHANGES IN WAGES ON STEAM RAILWAYS IN CANADA

**F**OLLOWING the signing of amendments to agreements providing for ten per cent reductions in wages for locomotive engineers, firemen, conductors, trainmen, yardmen and telegraphers, effective from December 1, 1931, to January 1, 1933, as recorded in the *LABOUR GAZETTE*, February, 1932, page 124, negotiations between the principal steam railway companies and the various organizations representing other classes of employees were carried on.

A Board of Conciliation and Investigation, under the Industrial Disputes Investigation Act, dealing with a dispute between the Canadian Pacific Railway and the International Brotherhood of Railway and Steam-

ship Clerks, Freight Handlers and Station Employees reported on February 19 that the parties to the dispute had reached an agreement providing for a similar reduction, namely, a deduction of ten per cent from each employee's pay from March 1, 1932, to February 28, 1933, the basic rates to be paid in full after that date unless other arrangements were made by that date (*LABOUR GAZETTE*, March, 1932, p. 260).

At the end of March an agreement between the Railway Association of Canada, representing the principal steam railways, and Division No. 4, Railway Employees' Department, American Federation of Labour (Fed-

erated Shop Crafts), amending the existing agreement to provide for a similar deduction from pay for a period of twelve months beginning April 1, 1932.

On April 8 an agreement was reached between the Railway Association of Canada and the Brotherhood of Maintenance of Way Em-

ployees providing for a similar reduction in wages for one year, beginning May 1, 1932.

Negotiations between the Canadian National Railways management and the Canadian Brotherhood of Railway Employees have been entered into regarding a proposed ten per cent reduction in wages for clerks, freight handlers, etc., on that railway system.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$7.27 at the beginning of March, as compared with \$7.34 for February; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.54 for March, 1922; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. The decline was due chiefly to lower prices for salt pork, bacon, lard, milk, butter, flour, tea and potatoes. The price of eggs was considerably higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.16 at the beginning of March, as compared with \$17.25 for February; \$19.47 for March, 1931; \$21.96 for March, 1930; \$21.52 for March, 1929; \$20.96 for March, 1922; \$26.92 for July, 1920 (the peak); and \$14.35 for March, 1914. Fuel was slightly lower due to decreases in the prices of anthracite coal and wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 showed little change at 69.1 for March as compared with 69.2 for February; 75.1 for March, 1931; 91.8 for March, 1930; 95.6 for March, 1929; 98.3 for March, 1922; 164.3 for March, 1920 (the peak); and 64.7 for March, 1914. Ninety-three prices quotations were lower, seventy were higher and three hundred and thirty-nine were unchanged.

In the classification according to chief component materials two of the eight main groups were higher and six were lower. The Vegetables and Vegetable Products group showed a slight advance, higher prices for barley, flax, oats, peas, rye, bran and shorts more than offsetting declines in the prices of flour, rubber, sugar, molasses, potatoes and hay.

The Animals and their Products group showed a substantial advance, the first which has occurred in this group since July, 1931, due to the higher prices for lambs, butter, cheese, lard and canned salmon, which more than offset lower prices for leather, calves, steers, eggs and meats. The groups which declined were: the Fibres, Textiles and Textile Products group, mainly because of lower prices for raw cotton, raw silk and raw wool; the Wood, Wood Products and Paper group, due to lower quotations for lumber and pulp; the Iron and its Products group, due to declines in the prices of certain rolling mill products; the Non-Ferrous Metals and their Products group, owing to decreased prices for aluminium, antimony, copper, tin, lead, silver and zinc; the Non-Metallic Minerals and their Products group, because of lower prices for anthracite and domestic coal; and the Chemicals and Allied Products group, due to declines in the prices of copper sulphate, zinc oxide, red lead and dyeing materials.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due to declines in the prices of flour, sugar, potatoes, fresh and cured meats, eggs and anthracite coal, which more than offset advances in the prices of fruits, onions, carrots, fish, cheese and butter, and the latter due to reduced quotations for steers, calves, leather, raw cotton, raw silk, copper, tin and lumber, which more than offset higher prices for flax, oats, barley, bran, shorts, hogs and lambs.

In the grouping according to origin raw and partly manufactured goods were lower, because of decreased prices for potatoes, steers, calves, fresh meats, eggs and copper. Higher prices for bran, shorts, rubbers, butter and cheese caused an advance in fully and chiefly manufactured goods. In this group the prices of flour, sugar, leather and copper sheets declined. Domestic farm products, articles of forest origin and articles of mineral origin were lower. Articles of marine origin were slightly higher.

## EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quantity for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and

this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1920, quarterly from 1921 to 1930 and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family

(Continued on page 462)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, and to show the minimum cost for an average family

consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3;

1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices showed little change during the month, sirloin steak averaging 25.3 cents per pound as compared with 25.2 cents in February, and shoulder roast averaging 13.7 cents per pound in March as compared with 13.5 cents in February. These prices compare with 29.3 cents per pound for sirloin steak in March, 1931, and 17.1 cents for shoulder roast. Mutton was up from an average price of 22.1 cents per pound in February to 22.4 cents in March. Pork prices were steady, fresh leg roast averaging 15.7 cents per pound and salt pork 16 cents per pound. These prices compare with 22.9 cents per pound for fresh pork in March, 1931, and 24.7 cents per pound for salt. Prices in the Prairie Provinces and in Quebec were considerably lower than in other provinces. Breakfast bacon averaged 22 cents per pound in March, as compared with 22.8 cents in February and 38.7 cents in March, 1931. Lard was down from an average price of 12.5 cents per pound in February to 11.8 cents in March, decreases occurring in most localities.

Egg prices were substantially higher in the western provinces while declines occurred in most localities in the Maritime Provinces. The average price for fresh was 32.8 cents per dozen in March, as compared with 29.7 cents in February, and for cooking 25.7 cents per dozen in March and 22.7 cents in February. Milk was again slightly lower at an average price of 10.2 cents per quart. Reductions were reported from Sorel, Stratford, Kingston, London and Calgary. Butter prices were lower in most localities, dairy averaging 20.4 cents per pound in March as compared with 22.3 cents in February and 33.3 cents in March, 1931, and creamery averaging 23.7 cents per pound in March, 25.9 cents in February and 37.6 cents in March, 1931.

Bread was unchanged at an average price of 6 cents per pound. Canned vegetables were again slightly lower, tomatoes averaging 10.4 cents per tin, peas 10.4 cents per tin, and corn 10.9 cents per tin. These prices compare with 13.7 cents for tomatoes in 1931, 12.4 cents for peas and 14.4 cents for corn. Beans were down in the average from 4.6 cents per pound in February to 4.4 cents in March. Potatoes were again slightly lower at an average price of 69.5 cents per ninety pounds. Anthracite coal declined from an average price of \$16.19 per ton to \$16.10. Decreases were reported from Toronto, Niagara Falls, Brantford and Kitchener.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices, which had advanced considerably during February, remained relatively steady during the first two weeks in March and then gradually declined until nearly the end of the month when some slight recovery occurred. The high price for the month was 66½ cents per bushel reached on the 10th and the low 58.6 cents per bushel reached on the 26th. The decline was said to be due to the increased shipments from Australia and the Argentine, and to reports that large quantities held in the United States might be marketed immediately. The recovery toward the end of the month was said to be due to a better demand from Europe for North American wheat. In coarse grains quotations for the most part were slightly higher, western barley being up from an average of 38.4 cents per bushel to 39.9 cents; western oats from 29.2 cents per bushel to 30.1 cents; and rye from 44.1 cents per bushel to 47.9 cents. Flax was unchanged at \$1.02 per bushel. Bran and shorts at Montreal were higher, each advancing \$2.25 per ton, the former to \$22, and the latter to \$23. Raw sugar at New York was substantially lower at 85 cents per cwt., Canadian funds, as compared with \$1.15 in February. Granulated sugar at Montreal was down from \$4.56 per cwt. to \$4.47. Ceylon rubber at New York was down from an average price of 4.6 cents per pound in February to 3.7 cents in March in Canadian funds. In live stock prices choice steers at Toronto declined from \$5.95 per hundred pounds to \$5.84 but advanced at Winnipeg

from \$4.92 per hundred pounds to \$5.08. Veal calves at Toronto declined from \$8.13 per hundred pounds to \$7.39 and at Winnipeg from \$7.16 per hundred pounds to \$5.76. Lambs at Toronto advanced from \$7.19 per hundred pounds to \$7.30 and at Winnipeg from \$5.97 per hundred pounds to \$6.25, while at Montreal the same grade declined from \$6.65 per hundred pounds to \$6.49. Bacon hogs at Toronto declined from \$4.94 per hundred pounds to \$4.90 but advanced at Winnipeg from \$4.05 per hundred pounds to \$4.12. Creamery butter at Montreal advanced from 21.4 cents per pound to 27.2 cents, at Toronto from 20.9 cents per pound to 26.9 cents, and at Winnipeg from 20 cents per pound to 25 cents. Fresh eggs at Montreal were up from an average price of 28.8 cents per dozen to 31 cents, while at Winnipeg the price was down from 28.8 cents per dozen to 24.8 cents. Raw cotton at New York was slightly lower at an average price of 7.7 cents per pound, in Canadian funds, as compared with 7.8 cents in February. Raw silk at New York was down from \$2.58 per pound to \$2.18. In lumber prices fir declined from \$11 per thousand board feet to \$10 and spruce from \$16 per thousand board feet to \$15. Automobile body plates were slightly lower at \$3.25 per hundred pounds, while annealed steel sheets also declined slightly to \$2.83 per hundred pounds. In non-ferrous metals electrolytic copper at Montreal declined from \$3.45 per hundred pounds to \$7.64 and imported copper wire bars from \$7.16 per hundred pounds to \$6.72. Tin ingots at Toronto were down from 29.8 cents per pound to 28.8 cents. Anthracite coal prices showed a seasonal decline, being down at Toronto from \$13.81 per ton to \$12.75.

### PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

#### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 63.4 for February, as compared with 63.7 for January, a decline of 0.6 per cent for the month. A decline of 0.6 per cent in food was due to a substantial reduction in meat

and fish, partly counteracted by advances in cereals and other foods. Among non-foods, iron and steel and cotton advanced, but all other groups were lower than in January.

The *Statist* index number, on the base 1867-1877=100, was 86.7 at the end of February, an advance of 2.3 per cent for the month due to substantial advances in vegetable foods, animal foods and sundries, which were partly offset by declines in sugar, coffee and tea, minerals and textiles.

**COST OF LIVING.**—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 146 at March 1, a decline of one point for the month due to decreases in

(Continued on page 472)

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) New Series. (i) Revised series. (j) Sum totals of the prices per pound of 96 articles of common consumption. (k) Estimated cost per capita of a year's supply of commodities in wholesale markets. (l) Until end of 1927. (m) Until end of 1926. (n) Prior to 1926, number of commodities was 236.

(Continued from page 464)

food prices, chiefly eggs, milk and potatoes, although butter prices were higher.

### Austria

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base of the first half of 1914=100, was 113 for March, an advance of one point for the month due to increases in food prices.

**COST OF LIVING.**—The official index number on the base July, 1914=100, was 108 for March, showing no change from February. With the exception of a slight reduction in the food group, all groups were unchanged.

### United States

**WHOLESALE PRICES.**—The *Annalist* index number on the base 1913=100, was 91.1 for March, a decline of 1.3 per cent for the month. With the exception of small increases in build-

ing materials and miscellaneous commodities, declines were shown in all groups.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 commodities of common consumption, was \$7.1515 at April 1, a fall of 2.3 per cent for the month. Of the 13 groups, only naval stores showed a rise, while fruits were unchanged and all other groups were lower than at March 1.

*Dun's* index number of wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included was \$138.316 at April 1, a fall of 0.9 per cent for the month. Increases were noted in the metals and miscellaneous commodities group, while all other groups declined.

**COST OF LIVING.**—The National Industrial Conference Board index number on the base 1923=100, was 80.1 for February, a decline of 1.6 per cent for the month. Declines were registered in all five groups.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Master Not Liable for Employee's Negligence Outside Scope of Employment

The Supreme Court of Canada, on February 2, affirmed the judgment of the British Columbia Court of Appeal in the case of *Battistoni versus Thomas*. The various stages of this case have been noted in the *LABOUR GAZETTE*, March, 1931 page 377; October, 1931, page 1161. The circumstances of the case, as already stated, were as follows:—

Morgan Thomas had a contract to collect milk in cans from farmers in Fraser Valley and deliver the filled cans at a dairy in Vancouver, and he employed his son to drive the truck. On Christmas Day, 1929, the son, having delivered his load, took a friend with him, and passed the afternoon driving about Vancouver instead of returning home with the truck as his father expected him to do. While he was so driving around, his car struck and seriously injured a woman (she and her husband being the plaintiffs in the case), who brought the action against the father and son (the former was included as being the employer of the driver of the truck). On appeal by the father against the decision of the lower court, the Court of Appeal held that in such cases the decision must depend upon particular circumstances. In the present case, the driver at the time of the accident was acting outside the scope of his employment and was going "on a frolic of his own," without being at all upon his master's business.

On the appeal by the plaintiff, Mr. Justice Lamont, in the Supreme Court of Canada, in affirming the judgment of the lower court, said:—

"A master is responsible for the consequences of his servant's negligent act only while the servant is on his master's business. That is to say, the master is responsible for the result of the negligent acts of his servant committed in the course of the servant's employment. The difficulty, however, is to determine when the master's employment has ended and the servant's frolic has begun, or, as in this case, to determine when the servant's frolic ended and he again entered upon his master's business."

His Lordship concluded that, in the present case, Claude Thomas (the driver of the truck) had made an independent journey, outside the scope of his employment, and that his father (the respondent) could not be held liable for the consequences of the son's negligent driving on that occasion.

*Battistoni versus Thomas* (Supreme Court of Canada), 1932. *Dominion Law Report*, vol. 1, page 577.

### Wages of Non-union Workmen in Quebec Must Conform with Union Agreement

Under a contract between a firm of contractors and a Protestant School Board in Montreal the firm agreed to pay carpenters a minimum rate of 75 cents an hour. The

contractor paid this rate to the carpenters who were members of the trade union concerned, but paid only 55 cents an hour to a non-union carpenter who was employed on the job. The latter brought an action against the contractor in the Circuit Court, Montreal, for the amount of the contract rate of wages, basing his claim on the provisions of an amendment of 1931 to the Professional Syndicate Act (LABOUR GAZETTE, May, 1931, page 528), which provides as follows:—

"If it be stipulated in any contract that workmen or the members of a syndicate, union or federation of syndicates shall receive a stated wage, such workmen or members, although not a party to the contract, are entitled to the rate of wages therein stated, notwithstanding any renunciation thereto afterwards agreed upon by them, whether expressed or implied."

Mr. Justice Stackhouse pointed out that the question at issue was whether all classes of workmen or only members of a syndicate were entitled to the protection afforded by the Professional Syndicates Act as amended by the new section.

"The amendment," he said, "reads 'workmen or members'. Is the word 'or' to be taken in its ordinary and usual disjunctive sense, or is it to be interpreted conjunctively? . . . If this amendment is to be read as including all classes of workmen, as well as those who are members of syndicates, there is no doubt that it is a direct derogation of the general principle of law as enunciated by our Civil Code regarding the general liberty of parties to contract, and the legislature in making such amendment to the Professional Syndicates Act has undoubtedly placed a very serious responsibility on those charged with the interpretation of their acts and intentions. There is no doubt that the rapid changes that are occurring in these eventful times have given rise to the necessity of such legislation in order to protect workmen and to afford them a relief from the more stringent enactments of bygone days. I, therefore, ask myself why should the legislature have passed such legislation with the idea that it should be limited to a certain class of workmen who have combined and organized themselves under the provisions of the Professional Syndicates Act, and omit therefrom the large body of independent workmen who, probably through no fault of their own or their desire to maintain their individual liberty, have not deemed it suitable to bury their personality. In other words, to admit defendant's contention, would be tantamount to recognizing class legislation of a very dangerous nature. The legislature may have expressed its inten-

tion in a slovenly manner, but that does not mean that the courts should be limited thereby and give an interpretation that should never have been intended.

"I am, therefore, of the opinion that the amendment 14a of the Quebec Professional Syndicates Act includes all classes of workmen, whether they are members of a professional syndicate, union or federation of syndicates, or independent workmen who are not associated with any corporate body, and that in virtue of this article, the plaintiff is entitled by law to the rate of wages fixed in the contract between the Protestant Board of School Commissioners and defendant, in the same manner as if he had been a party to the contract.

"For these reasons, I maintain plaintiff's action for \$58 and costs."

*Jensen versus Grimstead and Son Ltd.* (Quebec), 1932.

#### **Selection of a Checkweighman in Saskatchewan**

The miners employed in the Crescent Collieries, at Estevan, Saskatchewan, brought a charge in the Police Court at Weyburn against the owner of the mine, alleging that he had unlawfully discharged a checkweighman appointed by the employees, without having first applied in writing to a district court judge for permission to do so, as required by section 30 of the Mines Act of the province. Section 27 of the Act provides as follows:—

"The employees in any mine whose wages are regulated by the weight of the mineral recovered may, at their own cost, appoint one of their number (herein called a 'checkweigher') who shall be a practical working miner of at least three years' experience and resident in the province," etc.

The point at issue was as to the interpretation of the words "one of their number." The miners claimed that the section permitted them to appoint as checkweighman a member of their union, even though he was not actually employed at the mine; while the owner contended that as he had never employed the man in question, the latter had never been a checkweighman within the meaning of the Act. The Magistrate found that the miners had not complied with the requirements of section 27 in selecting a man to serve as checkweighman who was not one of their fellow employees.

#### **Right of Incorporated Community to Compensation for Member's Injury**

The question whether an incorporated society—in this case a religious community—can sue for damages for injuries to one of its members, was considered by the Judicial Com-

mittee of the Privy Council, in an appeal by the community from a judgment by the Supreme Court of Canada. The community in question was incorporated by a Quebec statute, and was bound by its rules to maintain, in sickness and health, its members, who by their vows own no property, everything acquired for them being vested in the community. In August, 1923, one of the members, who was mainly engaged in teaching, while travelling in a vehicle driven by an employee of a motor omnibus company, sustained, through the fault of the driver, serious injuries from which he subsequently died. The community thereby lost his services and were put to the expense of \$2,236 for his treatment and care. The community, in August, 1925, sued the company for damages to the extent of \$15,000. The action was tried by the Superior Court in Montreal, which awarded \$4,000 in damages. An appeal by the defendants against this decision was dismissed by the Court of King's Bench for Quebec (appeal side), but on further appeal the Supreme Court of Canada, by a majority, varied the judgment by reducing the amount of damages to \$2,236, and subject to that modification dismissed the appeal.

Two questions were in dispute: (1) whether any cause of action accrued to the community; and (2) whether any such cause of action was barred after one year. The Chief Justice of Canada was of opinion that the community had a cause of action under Article 1053 of the Civil Code, which reads:—

"Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill."

As regards the question of the limitation of the period after which action could be taken, the Chief Justice of Canada thought that the action by the community, "being a distant action from the action which could be maintained by the person who actually sustained the bodily injuries, was not an action 'for bodily injuries' within Article 2262 (2), which words," he considered, "should not be read as meaning 'for damages resulting from bodily injuries'." It fell rather within Article 2261 (2). Mr. Justice Lamont in a separate judgment took the same view upon both points. Mr. Justice Smith simply expressed his concurrence with the Chief Justice. Mr. Justice Mignault and Mr. Justice Rinfret dissented and held that the community had no cause of action under Article 1053; their judgments contained no express statement of what their views as to limitation would have been if they had thought that a cause of action did exist in the community.

Articles 2261 and 2262 are as follows:—

"2261. The following actions are prescribed by two years: 1. For seduction, or lying-in expenses; 2. For damages resulting from offences or quasi-offences, whenever other provisions do not apply; 3. For wages of workmen not reputed domestics and who are hired for a year or more; 4. For sums due schoolmasters, and teachers, for tuition, and board and lodging furnished by them."

"2262. The following actions are prescribed by one year:—1. For slander or libel, reckoning from the day that it came to the knowledge of the party aggrieved; 2. For bodily injuries, saving the special provisions contained in article 1056 and cases regulated by special laws; 3. For wages of domestic or farm servants, merchants' clerks and other employees who are hired by the day, week or month, or for less than a year; 4. For hotel or boarding-house charges."

The Judicial Committee of the Privy Council were of the opinion that the community's action should have been dismissed as being "prescribed by one year" under Article 2262 (2). This being so, they deemed it inadvisable to express an opinion on the remaining question, whether any cause of action accrued to the community, until that question should come before them in an appeal in which they could deal with it as the sole factor for their consideration.

*Maristes Freres (plaintiff and respondent) versus Regent Taxi and Transport Company (defendant and appellant)* Judicial Committee of the Privy Council 1932, *Dominion Law Reports*, vol. 2, page 70.

### No Mechanics' Lien on an Estate for Work Done for Tenant

A tenant occupying a house in Manitoba which he had rented from the owner engaged a plumber to install certain equipment, but died before he had settled his account with the plumber. The latter then sought to attach a lien to the owner's estate. The Referee of the Court of King's Bench decided that the plaintiff had no lien upon the estate, and, on appeal, this decision was affirmed by the Manitoba Court of Appeal, the Court holding that before a lien can attach against the estate of an owner of premises for work done, or material furnished, at the instance of a tenant, it must be shown that there was some direct dealing by the owner with the contractor, which, while not necessarily a direct contractual relationship, is more than mere knowledge of, or assent to, the work being done.

*Patridge versus Dunham et al.* (Manitoba), 1932, *Dominion Law Reports*, vol. 1, page 600.

# *Functions of the Department of Labour*

*Minister*—HON. W. A. GORDON

*Deputy Minister*—H. H. WARD

**Labour Gazette.**—The monthly publication of the "Labour Gazette" containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada and other countries, strikes and lockouts, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

**Labour Statistics and Information.**—The collection, compilation and publication of statistics of wages, hours, prices, cost of living, strikes and lockouts, industrial accidents and industrial agreements; also of reports on labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

**Industrial Disputes Investigation Act, 1907.**—The administration of the Industrial Disputes Investigation Act, Chap. 112, R.S.C., 1927, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

**Conciliation.**—The maintenance of a staff of officers at various points, including a Chief Conciliation Officer with headquarters at Ottawa, whose services are utilized in the adjustment of labour disputes.

**Fair Wages.**—The administration of the Fair Wages Policy of the Government of Canada, which provides for the observance of the current wage rates of the district. The eight-hour working day applies on Government contracts for construction, remodelling, repair or demolition; the current hours of the district apply in other cases.

**Employment Service of Canada.**—The administration of the Employment Offices Co-ordination Act, Chap. 57, R.S.C. 1927, under which, in co-operation with various Provincial Governments, free public employment offices are maintained in 70 centres; statistical information relative to employment conditions is also collected and published.

**Technical Education.**—The administration of the Technical Education Act, Chap. 193, R.S.C., 1927, which provides for grants to the provinces for the purpose of promoting technical education; the collection and publication of information in the form of bulletins and otherwise.

**Combines Investigation Act.**—The administration of the Combines Investigation Act, Chap. 26, R.S.C., 1927, which provides means for investigation of alleged combines.

**Dominion Government Annuities.**—The administration of the Government Annuities Act, Chap. 7, R.S.C., 1927, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

**Old Age Pensions Act.**—The administration of the Old Age Pensions Act, Chap. 156, R.S.C., 1927 (amended, Statutes of Canada, 1931, Chapter 42), which provides for a Dominion-Provincial system of non-contributory pensions to needy persons over seventy years of age. The statute becomes operative by agreement with the respective provinces, the latter being entrusted with the payment of pensions, and the Dominion Government reimbursing each province coming into the scheme one-half (increased to three-fourths in 1931) of the sum disbursed in pensions.

**Dominion Unemployment Relief.**—The administration of the Unemployment Relief Act, 1930 (First session of 17th Parliament of Canada, Chapter I), and of the Unemployment and Farm Relief Act, 1931 (Statutes of Canada, 1931, Chapter 58), which provide for the granting of aid for the relief of unemployment.

**Labour Legislation in Canada.**—The compilation and publication of reports containing the text of the labour laws of the Dominion and of the Provinces.

**Library.**—The maintenance of a library of publications on labour and economic subjects.

**International Labour Organization (League of Nations).**—The collection and transmission of information required by the International Labour Conference and Office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

# Publications of the Department of Labour

## Labour Gazette—

Published monthly in English and French. SUBSCRIPTION RATES: Canada, United States and Mexico, 20 cents per annum, postage prepaid. Subscriptions are payable in advance, and should be addressed, with postal note or money order, to Circulation Manager, Department of Labour, Ottawa. Bound volume for 1931 and for earlier years are available at \$2 each.

## Annual Report of the Department of Labour—

An outline of the activities of the Department during the fiscal year ended March 31, 1931. PRICE, 50 cents.

## Employment Service of Canada—

Annual Report of the Director, FREE ON APPLICATION.

## Technical Education—

Annual Report of the Director. Occasional Bulletins. FREE ON APPLICATION.

## Dominion Government Annuities—

Annual Report of the Superintendent. Booklets. Table of Rates, etc. FREE ON APPLICATION.

## Combines Investigation Act—

Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, Feb. 18, 1925. PRICE, 20 cents.

Report of Commissioner on Alleged Combine amongst Coal Dealers at Winnipeg and other places in Western Canada, Feb. 28, 1925. PRICE, 25 cents.

Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, June 9, 1925. PRICE, 20 cents.

Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, March 25, 1926. PRICE, 10 cents.

Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, July 31, 1926. PRICE, 15 cents.

Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, established to fix and maintain Resale Prices of Proprietary Medicines and Toilet Articles, Sept. 6, 1926. PRICE, 10 cents.

Report of Commissioner on the Proprietary Articles Trade Association, Oct. 24, 1927. PRICE, 10 cents.

Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an Alleged Combine of Plumbing and Heating Contractors and others in Ontario, Oct. 31 and Dec. 18, 1929. PRICE, 25 cents.

Report of Commissioner on the Electrical Estimators Association, an Alleged Combine of Electrical Contractors in the City of Toronto, October 4, 1930. PRICE, 10 cents.

Report of Registrar on alleged Combine in the Bread-baking Industry in Canada, February 5, 1931. PRICE, 25 cents.

Report of Commissioner on alleged Combine in the Motion Picture Industry in Canada, April 30, 1931. PRICE, 50 cents.

## Labour Organization in Canada—

Published annually. Contains full information on trade unions, their origin, organization, officers, etc., with outlines of chief events in each year in connection with labour activities. PRICE, 50 cents.

## Organization in Industry, Commerce and the Professions in Canada—

Published annually. Gives information regarding associations of employers in industry and commerce, and professional and scientific organizations. PRICE, 25 cents.

## Co-operative Associations in Canada—

Published annually. A directory of the co-operative movement. PRICE, 25 cents.

## Labour Legislation as existing in Canada on December 31, 1928—

Contains text of Dominion and Provincial labour laws. PRICE, one dollar.

Supplements—Legislation in 1929 and 1930. PRICE, 25 cents each.

## The Employment of Children and Young Persons in Canada (December, 1930). PRICE, 25 cents.

## Reports on Wages and Hours of Labour in Canada, 1900-1931. FREE ON APPLICATION.

## Report on Prices in Canada and Other Countries, 1931. FREE ON APPLICATION.

## Strikes and Lockouts in Canada and Other Countries, 1931. FREE ON APPLICATION.

## Bulletins of Industrial Relations Series:

PRICE, 10 cents each.

No. 1—Joint Councils in Industry.

No. 2—Report of a Conference on Industrial Relations held at Ottawa, Feb. 21-22, 1921.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed a decline at the beginning of April, according to returns tabulated by the Dominion Bureau of Statistics from 7,855 employers of labour, each with a minimum of 15 employees, representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 800,924 persons, as compared with 810,885 in the preceding month. The employment index declined from 88·7 on March 1, to 87·5 at the beginning of April, as compared with 99·7 on April 1, 1931. On the same date in the preceding ten years, the index numbers were as follows: 1930, 107·8; 1929, 110·4; 1928, 102·3; 1927, 97·4; 1926, 92·5; 1925, 88·3; 1924, 90·4; 1923, 88·7; 1922, 81·8 and 1921, 85·1. The average number of workers employed in 1926 by the reporting firms forms the base, equal to 100, upon which these index numbers are computed.

At the beginning of April, 1932, the percentage of idleness reported to the Department of Labour by local trade unions stood at 20·4 in contrast with percentages of 20·6 at the beginning of March, 1932, and 15·5 at the beginning of April, 1931. The April percentage was based on the reports received by the Department of Labour from 1,828 labour organizations covering a membership of 181,396 persons.

The reports for the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business during March, 1932, as indicated by the average daily placements effected, was slightly more than that of the previous month, but considerably below the daily average shown during the corresponding month of last year. Vacancies in March, 1932, numbered 35,275, applications 55,271, and placements in regular and casual employment 34,275.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly lower at \$7.22 for the beginning of April, as compared with \$7.27 for March; \$8.86 for April,

1931; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 continued to decline, being 68·4 for April as compared with 69·1 for March; 74·4 for April, 1931; 91·2 for April, 1930; 94·5 for April, 1929; 98·4 for April, 1922; 164·3 for May, 1920 (the peak); and 64·0 for April, 1914.

The loss in working time caused by industrial disputes in Canada during April showed a substantial increase over that recorded for the previous month. It was also much greater than in April, 1931. Eleven disputes were in progress at some time during the month involving 1,413 workers and resulting in a loss of 34,556 working days. Corresponding figures for March, 1932 were: 11 disputes, 1,510 workers and 26,410 working days, and for April, 1931, 12 disputes, 1,292 workers and 19,314 working days.

### Sixteenth International Labour Conference.

An account is given elsewhere in this issue of the proceedings of the 16th International Labour Conference, which was in session at Geneva from April 12-28, under the presidency of the Hon. Senator G. D. Robertson, former Minister of Labour of Canada. The subjects dealt with by the Conference included invalidity, old age and widows' and orphans' insurance; the abolition of fee-charging employment agencies; the age of children admitted to employment in non-industrial occupations; and safety conditions in the work of longshoremen.

### Death of M. Albert Thomas Director of the International Labour Office

The death occurred suddenly in Paris on Sunday, May 8, of Monsieur Albert Thomas, Director of the International Labour Office (League of Nations), Geneva, following a heart attack. Monsieur Thomas' passing came as a great shock to those who were associated with

him in the work of the International Labour Organization at Geneva and to his former associates in public life in France.

Since his appointment as Director of the International Labour Office in 1919, he had served as Secretary-General of the successive sessions of the International Labour Conference, held from year to year in Geneva and attended by representatives of member countries from all parts of the world. He was also in charge of the permanent bureau of this organization from its establishment at the seat of the League of Nations in Geneva. He had brought to these offices a vivid personality, extraordinary vitality, energy and industry and unusual gifts as an organizer. His death is, therefore, a great loss to this important branch of the work of the League of Nations.

Monsieur Thomas was born at Champigny-sur-Marne on June 16, 1878, the son of a baker who made every sacrifice to give him an education. He won scholarships which took him successively to Germany and Russia and he became a disciple of the French political leader Jean Léon Jaurès, who made him the editor of his newspaper *L'Humanité*. He entered public life in 1908 as a municipal councillor of Champigny-sur-Marne. In 1910 he became a member of the French Chamber of Deputies and in his first year made himself a political figure of national importance by his successful intervention in a great railway strike. In the Chamber of Deputies he fought side by side with M. Jaurès for the interests of the working classes and wrote books on "German Syndicalism," "Socialist Politics" and "An Anecdotal History of Labour." During the war he was appointed Minister of Munitions of France and became known as the man who fed the artillery with its ammunition along the battle front.

During his twelve years tenure of the post of Director of the International Labour Office, he was always both the mainspring and the storm centre of this Organization and exerted himself to the very utmost to promote the objects for which the International Labour Organization was set up, namely, the advancement of social justice and the improvement of labour conditions by international agreement and legislative action all over the world. His travels took him all over the globe and included several visits to Canada, where, indeed, his name is well known to students of labour matters in all of the provinces.

Reference is made elsewhere in the present issue of the LABOUR GAZETTE to the Sixteenth Session of the International Labour Conference, which was recently brought to a close in Geneva, and to the important part which Monsieur Thomas had taken in this gathering.

It was stated in newspaper dispatches that throughout the existing depression he had exerted himself unsparingly, against the advice of friends and physicians, to help in devising means of coping with the world-wide conditions of unemployment, and that when the Conference closed at the end of April he was obviously worn out.

### **New measures for unemployment relief in Canada.**

On another page of this issue will be found the text of the new Act respecting Relief Measures which was introduced in the House of Commons on May 4 by the

Minister of Labour, together with the text of the resolution containing the principles on which the Act is based, and an explanatory statement by the Minister.

The decision of the Federal Government to apply a portion of relief expenditures to enable unemployed families to gain a subsistence on the land was announced by Mr. Gordon in April. The grant will be subject to the granting of equal contributions by the province and the municipality concerned. It is proposed to assist families, physically fit and otherwise qualified to undertake settlement, to put themselves on a self-supporting basis. The joint contribution will be sufficient to cover the cost of modest establishment in the way of livestock and equipment in addition to necessary subsistence while the families are getting a start. "This is in no sense a Government-aided land settlement scheme," Mr. Gordon said, "but an application of relief expenditure to enable families, receiving relief to contribute to their own maintenance by labour on the land, where they may eventually establish themselves on a self-supporting basis." Administration of the scheme will be under provincial jurisdiction with respect to the selection of families, location of suitable farms and settlement of families thereon. While responsibility for administration will rest upon the provinces it is intended that advisory committees, consisting of representatives of province, municipality, Federal Land Settlement Branch, Canadian Pacific and Canadian National Railways, will co-operate. Adoption of the scheme in any locality will be dependent upon the approval and co-operation of the province and municipality concerned."

### **Unemployment relief in Australia**

The Hon. Joseph Lyons, Prime Minister of Australia, announced at a conference of the premiers of the various States held at

Melbourne during April that the Commonwealth Government would co-operate with the

States in negotiating a £10,000,000 loan for the relief of unemployment. The unemployment relief work to be financed by the proposed loan, he said, would include clearing, ring-barking, scrubbing, fencing, pest destruction, noxious weed eradication, and other sound work designed to increase productivity; also water supply, sewerage, and power and light schemes in the towns and cities. The money would be administered by a federal employment council and six similar councils in the States, on which service by men of the highest business capacity would be honorary.

### **Rural allotments for unemployed in New Zealand.**

Land settlement takes the leading place among the measures taken or proposed by the government of New Zealand to cope with unemployment. This policy is described in a recent statement by the Right Hon. J. G. Coates, Minister in charge of unemployment, which was presented to the House of Representatives on March 23. The minister states that the increase in unemployment has at last been arrested by the measures so far taken—subsidized employment on farms, highway construction camps for single men, encouragement of gold prospecting through the co-operation of the Unemployment Board and the Mines Department, public works such as land drainage, tidal flat and virgin-land reclamation, and arrangements to encourage farmers to employ help. A serious problem remains in the disposal of married unemployed, and for this a scheme of rural allotments is proposed.

"Under this new plan," Mr. Coates says, "sections of from five to ten acres will be acquired by any form of tenure which is most suitable to the case, and a cottage of the public-works type will be erected thereon. The allotments will be distributed throughout rural districts. The occupant of the section will work some of the time for himself on his place in providing his own sustenance, and part of the time for a nearby farmer or any one in the locality who can employ him. It is recognized that relief workers who are thus moved out will not immediately be able to earn an independent livelihood. Some part of the present relief allowance must therefore be continued. Again, there are many cases where a landowner could make available to a worker a portion of his land, and the occupant could work in the same way—that is to say, part of the time on his allotment, and part for farmers in the district. The Government appeals to all landowners and farmers to help in this time of stress. If they will

respond—and I am sure they will—an impetus will be given to production; men will be found employment; farmers will have labour; and at least some of the men, we hope, will later become permanent settlers. As typical of what can be done, and something that has been done, we can picture a farmer agreeing to take a relief worker and his family on to his place, with a cottage provided; the farmer setting aside a few acres and providing a cow or two, pigs and such farm-products as he can, while the relief worker agrees to work on stated terms on the farm. This matter of placing unemployed on rural allotments has been carefully considered. We are well aware of its difficulties and of its limitations; it is not wholly a land-settlement scheme, but rather an emergency measure to move some thousands of persons into an environment with opportunities for the individual. At the very least it will provide a shelter until the storm has passed over, and is certainly preferable to keeping families in congested areas with little hope or opportunity. Transport is amongst the incidental problems raised by a scheme of this character. The Railways Board have been consulted, and I am pleased to say that they have agreed to cut charges and to co-operate in a helpful way. The Government have agreed to recommend Parliament to provide a fund in the nature of capital expenditure to help to finance this scheme. With this plan—to which, I may say, I attach the greatest importance—I shall deal more fully when I speak on the Bill."

### **Proposed labour battalions for unemployed.**

The formation of a peace army composed of unemployed men was proposed in the House of Commons on April 13 by Mr. J. S.

Woodsworth, leader of the Parliamentary Labour Party. "It is suggested," he said. "that as an emergency measure—it is no permanent solution whatever, but it would be greatly preferable to the soup kitchen idea—that there be recruited a peace army; that every unemployed man be given a chance to earn \$1.10 a day, with everything found, and that this peace army go into the north country to clear brush, to make highways, and to beautify our parks and other areas, thus creating assets which would be of permanent value to us, especially so in view of the tourist business which has developed in Canada. More than anything else such an arrangement might help to save the morale of these men who are being degraded by hand-outs of food, and provision of very wretched shelter."

This suggestion is practically the same as that recently made by Mr. F. G. Brown, chairman of the British Columbia Division of the Canadian Manufacturers' Association, in the course of his evidence before the Select Committee of the Provincial Legislature on unemployment. Mr. Brown's evidence is reproduced on another page of this issue.

**United States employers and stabilization of employment.** In a pamphlet entitled: "Is Unemployment Insurance Feasible and Practicable?" Mr. J. D. Craig, actuary of the Metropolitan Life Insurance Company, reaches

the following conclusion as to the most hopeful procedure whereby American workers might ultimately be provided with security of employment: "Security against the economic hazards involved in the major risks of life is," he says, "the cornerstone of any lasting program of industrial relations. Any program of providing such security has a very vital effect upon the progress, or lack of it, in the life of any nation. Now is precisely the time for American employers and employees to collaborate more closely than ever before. The problem of unemployment is industry's problem. Every means possible should be adopted to encourage employers and employees to co-operate in each individual factory, in every trade and in every industrial community. Only through experimentation, only through using individual factories as laboratories, are we going to discover eventually any plan, or plans, under which the nation as a whole will reap a genuine economic and social profit."

**Amending the British Unemployment Insurance System.**

New legislation has been adopted by the British Parliament extending until June 30, 1933, the period in which "transitional benefit" may be paid under workmen's compensation.

On that date the major act passed by the late Labour Government is due to expire; the new measure thus carrying existing benefits until the time comes for a complete amendment of the whole legislation in the light of past experience, and also in view of the report of the Royal Commission on Workmen's Compensation under Judge Holman Gregory (LABOUR GAZETTE, April, 1932, page 379). The *Economist* (April 9) points out that the first stage in redeeming the whole system, namely, the cessation of borrowing for the fund and the stoppage of "legal abuses," has been already achieved. "Next year is to see the second stage—the co-ordination of a host of amending legislation."

"Transitional benefits," which are now to continue for another year, consist of two classes of persons, firstly those who do not satisfy the statutory condition of the unemployment insurance scheme that they shall have made 30 contributions during the past two years; and, secondly, those who, while satisfying that condition, have already received the full 26 weeks' benefit.

**Employment of women since the war.**

The extent and character of the employment of women in various countries since the war is the subject of a study in the April issue

of the *International Labour Review* (Geneva). The writer, Madame A. Vallentin, finds that the popular belief as to the sudden invasion of the labour market by women in recent years is not in accordance with the facts; what has happened is, not the entry of more women into wage-earning occupations, but the opening up of new possibilities of employment, and the transfer of large numbers from traditionally "female" trades to others which either did not previously exist, or were mainly or altogether carried on by men. "The most important fact," the writer states, "is that women's employment passed the climax of its development as far back as the beginning of the century, and that with few exceptions most countries show a relative reduction in the employment of women." Figures are given showing that, in the United States and the principal European countries, "the vast extension in the employment of women took place in the second half of the 19th century." Comparing the percentages of female employment at the beginning of the century with those of twenty years later (i.e. about 1921) it is shown that "out of eighteen States for which comparison is possible only six show a rise in the employed proportion of the total female population and the same six show a rise in the female proportion of the total employed population."

"It is a generally accepted opinion," the writer continues, "that the war led to an unexampled increase in the employment of women. It appears, however, that except in a few cases, this development of women's work during the war—a subject worthy of separate study—consisted of the transfer of women to occupations in which women had hitherto not usually been employed, rather than of the engagement of large masses of women who had hitherto not been in employment. Only in one field, that of salaried employment, did the new demand draw on a hitherto untapped source of labour, the daughters of the middle classes. Apart from a slight and temporary

employment of certain groups of women in industry, which is difficult to measure accurately, the war effected only a transfer of women from one occupation to another, from so-called women's occupations to so-called men's occupations—and this tendency did not cease with the war.... Increasing industrialization has been accompanied by a transfer of women from the old-established women's occupations to the new fields of employment opened to them."

It is concluded that "the occupations women are beginning to reject are either badly paid or entail much loss of freedom, and that the tendency is to seek better paid work, for which, too, better training is needed. The provisional and indeed haphazard employment of women, which under the lash of necessity drew masses of unskilled labour on to the market, is gradually giving way to a policy of more deliberate choice of occupations and direction of the labour market for women."

#### **Joint Trade Boards established in Spain.**

An Act to provide for the establishment of joint trade boards came into effect in Spain at the close of 1931. The boards are of three types, covering respectively industrial and rural employment, rural property, and agricultural production and industries. The joint boards will be composed of six representatives of employers and six representatives of workers, elected by their respective recognized associations, and of an equal number of substitutes; but when the joint boards combine several sections, each section may consist of four employers and four workers, and an equal number of substitutes. The president and vice-president are to be chosen by the unanimous vote of the members of the joint board; in case of disagreement the Minister of Labour and Social Welfare will decide. The functions of the boards will be to determine, for the occupation or trade concerned, general conditions governing employment, wages, minimum duration of agreements, hours of work, overtime, the dismissal of workers, and other conditions, which will form the bases of individual or collective agreements. The joint boards will also endeavour to avert disputes and will supervise the enforcement of social legislation, for which purpose the joint boards may designate, from among their members, inspectors who will be regarded as auxiliary inspectors of the official factory inspectorate. Decisions which, in the opinion of the provincial labour delegate, are liable to be prejudicial to the interests of the industry, or branch of the industry, will be submitted by him to the Ministry of Labour and Social Welfare. The Act makes

provision for appeal against the decisions of the joint trade boards. Final decision rests with the provincial labour delegate in the case of appeals against a decision of an individual character, and with the Ministry of Labour in the case of general decisions.

The Act provides that notice of any intended strike or lock-out must be communicated to the appropriate joint trade board, which will endeavour to effect an agreement between the parties; and that, following this notice, a strike or lock-out may not be declared within eight days, if the strike or lock-out involves failure of the supply of light or water, suspension of railway traffic, or leaving sick persons and hospitals unattended; within five days, in cases involving suspension of tramways or deprivation of any necessary article of consumption in a locality; and within forty-eight hours, in all other cases. The infringement of these provisions entails fines or imprisonment, according to the circumstances. In cases where a joint board fails to secure agreement between the parties or to obtain their consent to arbitration, the Ministry of Labour may direct the parties to have resort to the higher conciliation organ of the Council of Labour—an advisory body, with a membership composed mainly of employers' and workers' representatives.

**New Apprenticeship Board** has been appointed in Ontario to consist of the following members: Messrs

J. B. Carswell, of Hamilton (chairman), Ernest Ingles, of London, and F. S. Rutherford (representing the Provincial Department of Education). A summary of the new Act under which the Board was appointed appears elsewhere in this issue in the review of the legislation adopted by the provincial Legislature at its session recently concluded. Referring to the amendment of the Apprenticeship Act, the Hon. Dr. J. D. Monteith, Minister of Labour of the Province, stated that the chief change consists in a reduction of the minimum requirements of employment each year for an apprentice from 44 weeks to 24 weeks, exclusive of the eight weeks spent in day classes during the first and second years. This means that, whereas employers were formerly required to keep boys on the payroll for at least 44 weeks each year, they may now indenture apprentices if they are prepared to provide a minimum of 24 weeks employment each year, the understanding being that each boy will be kept at work so long as an employer has work of any kind for him to do, and that no new apprentice will be taken on while an employer is unable to provide work for boys already indentured."

Dr. Monteith stated that over 80 per cent of the assessment levied during the past year has been paid and that now that the policy and organization for the future has been settled, it was expected that those who had refrained from co-operation would submit their assessments and deal direct with the newly appointed board in all matters pertaining to the Apprenticeship Act.

**Experience shows need for vocational guidance.**

"An astounding need for vocational guidance for adults" is indicated in an account of the Public Employment Centre at Rochester, New York, during the past year, which appeared in the *Personnel Journal*, February, 1932. The Rochester Centre was established as an experimental employment office at the suggestion of the State Advisory Council on Employment Problems, which was appointed in New York about two years ago. Dr. Bryce M. Stewart, former director of the Employment Service of Canada, is the chairman of the committee in charge of the office. "The Public Employment Centre of Rochester," it is stated, "is essentially a laboratory where methods and procedures are controlled in the effort to work out a particular technique for employment exchanges."

As a first measure the Bureau segregated groups of occupations, allotting them to interviewers whose experience gives them special training to understand the requirements of the work involved. Each of these divisions acts as a separate unit under a director, the whole plan being integrated for centralized control through the manager. The aim of the agent who interviews applicants for work is to obtain and to give information, and also to establish permanent friendly relations with the person interviewed. The need for vocational guidance of the workers became apparent in the course of this work. As far as possible, vocational guidance is given in each interview; the choice of an occupation being however left to the applicant. Tests are applied to the applicant's general ability and special aptitudes; and on the other hand, jobs are analyzed and classified so that the worker may be brought into contact with the occupation which best suits his capacity. "Nothing is more apparent," it is stated, "than the prodigious need for training and retraining. . . . When technological revolutions occur, their effects are immediate and tragic: history reveals them clearly, but forecasting them in this Power Age requires prophetic insight."

It is found that changes in mechanical processes have occurred where operations were formerly very expensive; the Public Employment Centre of Rochester hopes to collect data from the diversified industries in that city and to study operations which are the "high cost points." It is pointed out that until fairly definite information is obtained as to what occupations are now undergoing marked changes, and until some means is found to predict trends in occupational shifts, the immediate problems of retraining will be obscure.

It is hoped that a new type of employment office will be evolved that will become the recognized medium by which employers may be brought into touch with the most suitable workers, and a balance be maintained between the demand for labour and its supply.

**Wages rates on public works in United States.**

A Bill was passed by the United States Senate on April 18 relative to the rates of wages to be paid to workmen employed on building and construction work for the Federal Government. An Act of the U.S. Congress, passed in 1931, provides for the payment of prevailing wages rates to workmen employed on contracts for public buildings in excess of \$5,000 (LABOUR GAZETTE, June, 1931, page 644). The present Bill would amend this statute by extending its application to general construction as well as to public buildings, and by requiring that the specifications on which tenders are taken should contain a statement of the prevailing wages rates in the place where the work is to be performed, and that the contractor would be obliged to apply these wages. Where the work in question is to continue for more than three months, the Secretary of Labour of the United States, at the request of the Government department concerned, or on petition of the contractor, or of not less than twenty per cent of the workpeople concerned, would be required from time to time to re-examine the prevailing wage scales and to make any necessary alterations. In cases where wages scales have been increased during the life of a contract, it is required that the contractor shall be indemnified by the Government accordingly, and in cases where wages rates are decreased, the contractor is to make a refund to the Government.

The legislation provides further that contractors would be required to keep books and records showing the wages actually paid and that these should be open to inspection by U.S. Government officials. For failure to pay prevailing wages, the contractor will forfeit

\$10 for each workmen affected, and in any cases where the prevailing wage was paid and a refund exacted from the workman, the forfeit would be five times the value of the refund. Persons forced to accept less than prevailing wages or to make refunds could collect amounts by filling sworn declarations with the Secretary of Labour of the United States, the amounts to be deducted by the U.S. Comptroller in making settlement to the contractor, or by suit against the contractor by the United States.

The prevailing wage policy is also to be applied to work done by day labour as well as by contract.

Since its adoption by the U.S. Senate the Bill has been referred for attention to the House of Representatives.

#### **Extension of minimum wages to stores in Quebec.**

As was noted on page 298 of the March issue, the Women's Minimum Wage Act was amended at the recent session of the Quebec Legislature so that it should include commercial establishments in its scope. During April the Commission which administers the Act decided that, as a first stage, the new provision would be confined to shops in which at least ten persons, male and female, are employed. Later, it is possible that the smaller stores may also be dealt with. Following the usual procedure before issuing orders the Commission will hold conferences, at which representatives of the employers and of the workers will be present, for the purpose of securing information as to cost of living, rates of wages and working conditions in each district. Mr. Gustave Francq, chairman of the Commission, recently appealed for the co-operation of all concerned, stating that the minimum wage system had proved successful in industrial establishments during the past five years.

#### **Minimum Wages for Boys recommended in Quebec.**

Mr. Gustave Francq, chairman of the Quebec Women's Minimum Wage Commission, stated during April that the Commission intended to recommend the amendment of the Act at the next session of the Provincial Legislature to make its provision applicable to boys as well as girls. It will be recalled that the Manitoba Act was extended last year to cover boys under 18 years of age (LABOUR GAZETTE, May, 1931, page 503). (A regulation governing the employment of boys in the manufacturing industries in Manitoba is given on another page of this issue.) Mr. Francq explained that the ex-

tension was needed as employers were found to be threatening to dismiss girls, for whom minimum wages are now fixed by the Commission, and to replace them with boys at a much lower rate. The chairman referred also to the practice of some employers of female labour in seeking permits from the Commission to re-engage, at apprentices' rates, girls who are ready to pass into the "experienced" class at higher wages; the tendency to substitute boys for girls is stated to have resulted from the Commission's refusal to grant such permits in many cases.

#### **International co-operation for safety in mines.**

Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines, in a recent outline of the Bureau's various duties, referred to the co-ordination of the knowledge acquired by the principal mining countries in regard to mine safety, as follows:—"In conjunction with these activities co-operative coal-mine research is carried on between the United States Bureau of Mines and the government agencies in Great Britain, France, Belgium, and Germany. Since these European countries encounter problems similar to our own in coal mining and are active in research work looking to cause and prevention of mine accidents, interchange of information and co-operative investigations are of great mutual benefit. The chief mining engineer acts as liaison officer between the Bureau and foreign nations in these activities."

#### **British branch plants in Canada.**

The Dominion Bureau of Statistics recently issued a report concerning 157 new British and foreign concerns that have been established in Canada since 1930.

According to the nature of their manufactures these industries are in part as follows:—"There are nine producing vegetable products; six producing animal products outside of textiles; nine producing textiles; thirteen producing wood and paper products; forty producing iron products; twenty-eight producing non-ferrous metals products; six producing non-metallic mineral products; fifteen producing chemical and allied products; four producing mining and metallurgical products, and eight producing miscellaneous products.

The monthly review *Agricultural and Industrial Progress in Canada*, published by the Canadian Pacific Railway Company at Montreal, points out that the preponderance of United States over British branch plants, is naturally strongly marked, and it is expected that this will continue to be the case for some

time to come. "United States industrial firms are keenly alive to the value of the Canadian branch plant as a means of access to outside markets. But according to an observer closely in touch with British industry and with conditions in Canada, British interest in the Canadian industrial field may be expected to become an increasingly important factor in the situation during the next decade. According to this authority, more British firms will investigate Canada with a view to branch plant establishment during the next two years than ever before, and more British plants will actually be established during the next decade than has been the case heretofore. Regarding British industrial expansion in the Dominion, it should be remembered that branch establishments overseas, thousands of miles from the parent plant, is a step requiring the most thorough investigation and consideration. According to authoritative opinion, it is impossible to generalize as to what classes of British industry can benefit by establishing in Canada. Each firm considering this step requires to study the matter with the utmost care from its own individual standpoint, weighing its requirements in the matters of labour, transportation, raw materials, and its opportunities in the way of markets."

At the present time, the Dominion Bureau of Statistics is preparing a table showing the number of firms of outside origin established in Canada year by year since 1926. These are being classified, with totals for each classification and inclusive total for each year. Such a compilation involves a great deal of correspondence and checking at a time when the Internal Trade Branch is exceptionally busy in view of the approaching Economic Conference at Ottawa.

**Experiments in company plans for workers' security.**

A series of pamphlets is in course of publication by the Industrial Relations Section of Princeton University (New Jersey), dealing with company savings and investment plans for the benefit of employees. The purpose of the series is to assist industrial executives contemplating the formation of such plans by providing them with concise summaries of the experience of those already in existence. "Compulsory plans for employee savings and investment," it is stated, "taken as a whole, have already a record of considerable effectiveness in meeting the needs of industrial employees. To the employer they have had the appeal of emphasizing individual initiative and responsibility along with the advantages of co-operative group action with company assistance. Their shortcomings have been a lack of inclusiveness and,

in some cases, insufficient security. The key to the success of the more effective plans has been a sustained company interest in developing a program of thrift on the part of each worker adapted to his needs, and in assuring the security and liberality of the returns provided."

Dr. J. Douglas Brown, the Director of the Section, in a foreword to the first pamphlet in the series, on "The Use of Building and Loan Associations in Company Programs for Employee Savings and Investment," makes the following observations on the significance of the efforts now being made by employers to cope with the problems of the depression:—

"The distress of long-continued unemployment has brought into sharp focus the essential need for financial security on the part of American workers. Whether the need will be met by the employer initiative alone, or state compulsion will be necessary to accelerate employer action, now hangs in the balance. During the past two decades, workmen's compensation and minimum wages have been definitely allocated to the fields of legislation and private initiative, respectively. The next decade will probably see the test whether the financial security of the individual employee can remain outside the field of legislative action. The results of that test, while much influenced by the length of the present depression, are largely in the hands of American employers."

The present pamphlet shows that a building and loan association, under the right conditions, offers a double service to employees. It furnishes a means for the accumulation of an investment fund and it makes loans to members for the purchase or construction of homes. The plan of loan repayment in small but regular amounts over a long period of time is found to be particularly suited to employees of moderate income. It is thus a possible aid in the solution of two employee problems in which the employer has an interest, those of thrift and housing. The various forms of organization now in existence are described in detail, and a bibliography of useful publications on the subject is included.

The third biennial Canadian Conference on Social Work will be held at Winnipeg on June 7-9, when prominent speakers will deal with the "big business" of the social work now being carried on under the inspiration of the enlightened conscience of Canadian communities. Over \$100,000,000 a year, it is stated, is spent on social efforts by the people of Canada, and the conference affords a unique opportunity for making this work more efficient, and for stimulating enthusiasm by the exchange of ideas between its leaders.

A union-label law for the District of Columbia was approved by the President of the United States on February 18, 1932. In addition to this law, similar legislation has been adopted by 44 States. The laws in general authorize associations of employees to adopt a device to designate the products of their labour. Labour organizations are therefore secured in their right to register, etc., the trade-marks or labels chosen by them to distinguish their products.

The Forum Publishing Company (New York City) has established a savings reserve fund to provide assistance to employees in times of illness and unemployment. A sickness and accident fund is raised by employer and employee contributions and the benefits paid range from \$10 to \$25 a week for a period of 13 weeks. Separate savings are accumulated for assistance during unemployment. This organization also provides a dismissal-wage payment amounting to 25 per cent of wages, or not less, than \$10 a week, for six months.

The Nova Scotia Government has appointed the following members of the Nova Scotia Miners Land Settlement Board (LABOUR GAZETTE, March, 1932, page 249):—Hon. O. P. Goucher, a member of the executive council, of Halifax (chairman); D. R. Nicholson, of Cox Heath, Cape Breton; Dr. H. C. McIntosh, of Glace Bay; Joseph McDougall, of Sydney Mines; and Dr. M. M. Coady, of Antigonish.

Mr. Roderick Kerr, of Glace Bay, has been appointed a member of the Minimum Wage Board of Nova Scotia, to serve for a period of two years.

An unemployment-benefit plan was placed in operation by the Minnesota Mining and Manufacturing Company (St. Paul) on January 1, 1932. The plan provides for benefit payments for from 10 to 17 weeks in any one year, depending upon length of service. These payments are at the rate of 60 per cent of the first \$10 of normal earnings plus 20 per cent of the balance of weekly earnings in excess of \$10, plus 5 per cent of the total benefit payment for every year of service beyond 3 years. The cost of the plan will be met by employer contributions not to exceed 2 per cent of pay roll, and by employer and employee contributions in times of emergency.

Automatic signals are rapidly displacing watchmen and gatemen at highway crossings in the United States. A study made for the Bureau of Labour Statistics, and summarized in the *Monthly Labour Review* (Washington) shows that the percentage of displacement ranges from about 50 per cent in the case of combined manual and automatic installations, to 100 per cent, in the case of complete automatic track-circuit control or of grade separation. It is conceded that automatic protection for 24 hours a day is preferable to part-time protection by watchmen and flagmen. The estimated number of employment opportunities lost through the use of automatic signals and grade separations up to the end of 1930, was 44,343. A factor compensating to some extent for the displacement of the watchmen and flagmen is the provision of employment, for other classes of workers, on grade-separation projects and in the maintenance of the automatic signals.

### Employment in Canadian Wood-using Industries

A report on wood using industries in Canada in 1929 was published recently by the Dominion Bureau of Statistics as part of the Census of Industry (LABOUR GAZETTE, June, 1931, page 725). The average number of employees engaged in this industrial group in that year was 39,265, the wages and salaries of these employees being \$42,514,682. Employees in Ontario numbered 22,320, with a total pay-roll of \$24,846,281; Quebec came next with 9,357 workers, who were paid \$9,120,612 in salaries and wages; while British Columbia gave employment to 2,689 people at \$3,301,362.

The extent of employment and the amount of wages in each component industry in the group in 1929 were as follows:—Planing Mills, sash and door factories, 13,132 people; wages and salaries, \$14,966,072; Furniture, 13,082 people; wages and salaries, \$14,512,073; Boxes,

baskets and crates, 3,579 people; wages and salaries, \$3,224,267; Carriages, wagons and sleighs, 2,325 people; wages and salaries, \$2,745,992; Cooperage, 616 people; wages and salaries, \$667,672; Coffins and caskets, 761 people; wages and salaries, \$863,968; Sporting goods, 525 people; Boatbuilding, 881 people; wages and salaries, \$912,339; Laths, trees and shoefindings, 566 people; wages and salaries, \$539,964; Handles, spools and wood-turning, 651 people; wages and salaries, \$486,596; Carriage and wagon materials, 146 people; wages and salaries, \$174,866; Woodenware, 462 people; wages and salaries, \$399,755; Clothes pins, 210 people; wages and salaries, \$130,701; Excelsior, 113 people; Beekeepers' and poultrymen's Supplies, 22 people; wages and salaries, \$20,694; Miscellaneous wood-using industries, 2,198 people; wages and salaries, \$2,290,021.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of April was reported by the Superintendents of the Employment Service of Canada to be as follows:

A few requests for farm hands for spring planting were received in the Province of Nova Scotia and men were accordingly sent out. Good fares were reported by bankers and shore fishermen, the catches of salmon, particularly, being of good size and quality. There were no new developments in the logging industry. Some mines in the vicinity of New Glasgow operated only one or two days a week, while others were entirely idle, the majority of those in Cape Breton also working only two days per week. Confectioners and bakers reported business as good. Shipment of oil to outside points also increased sales in that division. Other industries were working part time or not at all. Building activities were somewhat slow, although a few new contracts were being let. Some highway construction was also in progress. Relief work was likewise provided by the various municipalities. Transportation was fair, and trade, both wholesale and retail, poor. A number of requests were received for charworkers and women domestics and these orders were readily filled.

Very little spring ploughing had been done in the Province of New Brunswick due to wet weather, but some farmers were busy burning brush and stumping new land. There were plentiful supplies of cod, halibut, haddock and lobster. As the fishing season for the latter opens the first of May and gives employment to many hundreds of men and women, the latter in canneries, about 150 hands had already been engaged at Point Escuminac and Port Sapin factories and others were en route to the Cumberland-Guysboro section of Nova Scotia, where a similar season was about to open. There was no activity in logging or mining. Manufacturers of confectionery and foodstuffs reported business fair. Foundries and machine shops were very quiet and a reduction in staff and a cut in wages had been made at the Saint John dry dock. All other plants were working on short time. Building construction on the new high school, union depot and pier at Saint John was well under way, but elsewhere little new work was being undertaken. Some employment, however, was afforded on highways. Water-front work consisted mostly of coastal traffic. Passenger and freight transportation on railways was fair. Trade was quiet, with collections poor. Spring cleaning had created an extra demand for charworkers, but regular

placements for women domestic workers showed little change.

Farming in the Province of Quebec showed somewhat improved conditions, but there was a decline in orders in the logging industry. Mines at Amos and Rouyn were preparing for a busy season, but in both localities a number of men were idle, for whom no work was yet available. Manufacturing industries throughout the province were quiet, the only exception being in the City of Quebec, where the boot and shoe industry was reported to be active. Improvement was noted in building construction, especially at Hull, Sherbrooke, and Montreal, where orders were being received daily for tradesmen, particularly painters, joiners and plasterers. At Quebec, however, construction was quiet, and no permits had been issued at Three Rivers during the month of April. In the latter city a large number of workers were still engaged on unemployment relief work. Only one office reported transportation as normal. Trade at Sherbrooke, and Three Rivers was satisfactory. A better demand for women domestic workers was also noted.

A steady demand for farm help was noted throughout the Province of Ontario, although wages were not high, single men being placed more readily than married couples. The only activity in logging consisted of a few river drivers sent out preparatory to spring drives, but it was expected that the calls for this kind of labour would be fewer than usual this year, as last winter's cut was light. While mines were running steadily, they were taking on only a few men from day to day until surface work could be started. Nearly all factories were operating below normal capacity and prospects for a resumption of activity at an early date were not overbright. The auto industry, however, in some centres was slightly busier and it was thought likely that a few factories would be running on full time within a few weeks. Manufacturers of textiles, ice making machines, refrigerators and soft drinks also reported improvement but the conditions in the iron and steel group were quiet. There was no building construction of any importance under way, though small contracts were being carried on, thus hundreds of expert workers were available with very little chances of employment, relief work providing the only activity in some localities. In the women's domestic section a fair number of calls was listed for cooks general, but suitable women for these positions were not always easy to obtain. Casual help, however, was in demand and was easily supplied.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

(1) Calculated from yields of Ontario bonds.

(6) Excluding lines east of Quebec.

(2) For group figures, see articles elsewhere in this issue.

(7) Including lines east of Quebec.

(3) Bradstreet.

(8) MacLean's Building Review.

(4) Figures for end of previous month.

(5) Figures for four weeks ending April 30, 1932, and corresponding previous periods.

(9) Sugar production given in periods of four weeks ending March 26, and February 27, 1932, April 25, March 28, and February 28, 1931.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

More than sufficient men were available to meet all calls for farm help in Manitoba. Seeding was well advanced, particularly in the western part of the province, due to heavy rains, which had given the land a much appreciated soaking, and removed for the time being the danger of the soil drifting, which had already occurred in some districts this spring. Although the demand for farm hands was lower than usual, this was partly due to the fact that many farmers retained the help secured during the winter months under the Provincial Government farm employment plan, while others, who normally hired spring help, were unable to do so this year, and so were doing only what they could, by themselves. There was no activity in logging and mining. Manufacturing remained steady. Building construction was not decidedly active, but was considered to have made a fair start for 1932. Several large contracts were under way and others were to be started shortly, consequently, the demand for building trades, mechanics and labourers was slightly greater than formerly reported. Casual work on relief undertakings also provided employment for several hundred men. Not much change was reported in retail trade conditions, but wholesale lines maintained a steady turn-over and collections were fair. Except for a reduction in requests for day workers, the work of the women's domestic section was well maintained.

Rain and cold weather somewhat delayed farm operations in the Province of Saskatchewan, and many enquiries were received as to Government assistance in paying farm help. Little activity was recorded in the mining group at Estevan, as mines were employing only their summer crews. Orders received in building construction were all of a casual nature and easily filled. Relief work was being supplied married men in some centres, but a large number of unplaced applicants was still registered at the offices. One railway gang of former employees was taken on at North Battleford, but elsewhere no railway construction was in evidence. Placements of domestic servants in the women's section showed little change. Quite a number of farm household orders were on hand, but these offered very low wages and would be hard to fill.

Weather conditions in the Province of Alberta being unfavourable for work on the land, the demand for farm labour was smaller than usual. However, farmers throughout the district of Medicine Hat were hopeful, and crop conditions considered ideal, due to recent heavy rains. The call for sheepmen was good and all available men for this work were sent out. Logging and mining were very quiet. Manufacturing industries showed no increased activity and many were working on short time.

A slight improvement was noted in building construction, due, principally, to repairs and alterations. There was still a number of tradesmen unemployed and prospects for other construction work were indefinite. Recent heavy storms required considerable work on country roads, telephone and telegraph wires, and had been the means of providing several weeks' employment. In many instances former employees of the companies affected were hired. No gangs were made up for the railways and about 800 men were affected by the closing of the railway shops at Calgary, nor was it expected that the total number laid off would be replaced when the shops again opened. Wholesale and retail trade was fair. There was some difficulty in obtaining experienced women domestics for city vacancies, although applicants were greatly in excess of orders.

Farming remained quiet in British Columbia, a large number of farmers doing without necessary help, having no money to pay wages. Queen Charlotte Island logging camps were active but elsewhere conditions were quiet, the only improvement noted being the reopening of a few small railway tie cutting mills and there was no immediate prospect of resumption of operations by the larger mills or camps. The mine at Kimberley continued to work steadily and a few men were employed at Perry Creek, but for the most part, there was little activity in this division. No change was reported in manufacturing, with little or no likelihood of any demands being made for help. Very little new work in building construction was undertaken and all projects already started were well under way. Relief work, both municipal and provincial, provided in many localities the only form of employment available, and this did not begin to absorb the number of unplaced applicants registered at the offices. Employees at the drydock and shipyard at Prince Rupert were working on short time and longshoring there also was quiet, but at Vancouver, a considerable movement of wheat rendered conditions on the waterfront fairly good. Trade was fair. There was some improvement noted in the women's domestic section at Vancouver, but a large number of women and girls was still registered for employment.

#### EMPLOYERS' REPORTS.

Employment at the beginning of April showed a seasonal decline which, though larger than the reduction recorded on April 1, 1931, was less than that indicated in the early spring of 1930. The Dominion Bureau of Statistics tabulated returns from 7,855 firms whose staffs aggregated 800,924 persons, compared with 810,885 in the preceding month. The index number (based

on the 1926 average as 100) stood at 87.5, as compared with 88.7 on March 1, 1932, while on April 1 in the eleven preceding years it was as follows: 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1.

All provinces except British Columbia reported reduced employment, the losses in Quebec being greatest. In the Maritime Provinces, there was a further decrease in employment; construction was slacker and logging camps reported important seasonal losses, while manufacturing, coal mining and trade indicated improvement. In Quebec, mining, transportation, highway construction and trade showed heightened activity, while logging reported large seasonal contractions; manufacturing was also slacker, and there was pronounced curtailment in building construction. In Ontario, there was decided seasonal shrinkage in logging, and highway and railway construction also showed curtailment, while manufactures, transportation and trade recorded increased employment. In the Prairie Provinces, the decline took place chiefly in construction, but logging, coal mining, manufacturing and retail trade also showed contractions. In British Columbia, the greatest gains were in manufacturing, logging, highway and railway construction, while shipping, building construction and trade released help.

Employment advanced in Montreal, Ottawa and Windsor and the Adjacent Border Cities; losses were noted in Hamilton and Winnipeg, while Quebec City, Toronto and Vancouver reported practically no general change. In Montreal, manufacturing was slacker, but transportation and construction recorded heightened activity. In Quebec, manufacturing registered a small gain, but transportation was duller, so that the change in the situation as a whole was slight. Toronto employers also reported no general change, improvement in manufacturing, transportation and trade being offset by losses in construction. In Ottawa, there was an advance, chiefly in construction and manufacturing. In Hamilton, manufacturing and construction released employees, while trade was rather more active. In Windsor and the Adjacent Border Cities, there was pronounced expansion, principally in automobile plants. In Winnipeg, manufacturing was rather quieter, and communications, transportation and trade were also slacker. In Vancouver, there were small increases in lumber mills, construction and transportation, and similar declines in iron and steel plants and trade.

An analysis of the statistics by industrial groups shows further improvement in manu-

facturing, particularly in the textile, pulp and paper and iron and steel industries, although lumber, leather, food and chemical plants also afforded increased employment. On the other hand, curtailment was indicated in tobacco and beverage, non-ferrous metal, electrical apparatus, musical instrument and rubber factories. Among the non-manufacturing divisions, local transportation, laundries and cleaning establishments, wholesale and retail trade recorded heightened activity, while logging, communications and construction showed curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1932.

#### TRADE UNION REPORTS.

Employment for local trade unions during March continued in the favourable trend shown during the previous month, the percentage of idleness standing at 20.4, in contrast with a percentage of 20.6 at the close of February. Returns for March were received from a total of 1,823 labour organizations with a membership aggregate of 181,396 persons, 36,961 of whom were without employment on the last day of the month. Conditions, however, remained more depressed than in March a year ago when 15.5 per cent of the members reported were idle. Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia unions all showed slight employment advances from February, which were in large measure offset by the declines apparent among Alberta, Manitoba and Quebec unions, Alberta unions showing the most perceptible change. A large falling off in activity was noted by Quebec, Ontario and Manitoba unions from March, 1931, and in New Brunswick, Nova Scotia, Alberta and British Columbia declines of much lesser magnitude occurred. In Saskatchewan, however, minor gains in employment were reported.

A review in greater detail with tabular statements on unemployment at the close of March, 1932, as shown by local trade unions, will be found elsewhere in this issue.

#### EMPLOYMENT OFFICE REPORTS.

During the month of March, 1932, references of persons to employment made by the offices of the Employment Service of Canada numbered 35,859, while the placements effected totalled 34,275. Of the latter, the placements in regular employment were 7,560 of men and 3,159 of women, a total of 10,719, while placements in casual work were 23,556. Applications for work reported at the offices numbered 55,271, of which 45,127 were of men and 10,144

were of women workers. Employers notified the Service during the month of 28,586 vacancies for men and 6,689 for women, a total of 35,275. An increase was shown in vacancies and placements but a reduction in applications when the above figures were compared with those of the preceding month. All sections, however, registered substantial declines from the corresponding month a year ago, the record for February, 1932, showing 33,426 vacancies offered, 55,558 applications made and 32,633 placements effected, while in March, 1931, there were recorded 46,295 vacancies, 68,034 applications for work and 44,884 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1932, and also for the quarterly period January to March of the current year may be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during March, 1932, was \$3,323,602 as compared with \$2,578,597 in the preceding month and with \$9,948,979 in March, 1931.

The *MacLean Building Review* states that construction contracts as a whole for all Canada had less value during April than in March. Taking building contracts alone for comparison, a gain is shown for April over either February or March. The inability of municipalities to finance other than absolutely necessary works is responsible for the slackening in the engineering group. The total value of construction contracts awarded during April was \$10,112,900.

According to MacLean Building Reports Ltd., 39.7 per cent of the value of contracts awarded for April were shown for the Province of Ontario, the value being \$4,017,800. Quebec had 29.1 per cent or \$2,947,900. The Prairie Provinces were credited with \$1,724,100 or 17.1 per cent while British Columbia took care of 8.3 per cent, \$838,100 and the Maritime Provinces \$585,000 or 5.8 per cent. Thirty-eight per cent of the April contracts related to business buildings, the total being \$3,845,600. Engineering contracts shared to the extent of 30.7 per cent or \$3,104,900. \$2,485,300 was the figure for residential building. This was 24.6 per cent of all contracts. Industrial showed 6.7 per cent or \$677,100.

#### Production and Trade

INDUSTRIAL  
PRODUCTION. Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 487.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics states that the general business situation in Canada was not greatly changed in March from the level of the preceding month, an index of manufacturing production maintained by the Dominion Bureau of Statistics being 123.3 compared with 119.4 in February. The primary iron and steel industry was considerably more active in the month under review, the gain in the output of pig-iron and steel being one of the influences leading to the advance in the index. The production of pig-iron showed a sharp gain while steel ingots and castings, after seasonal adjustment showed an increase of nearly 31 per cent. Production of 8,318 automobiles during March was the greatest for any month since last May when 12,738 cars were made. The month's output exceeded by 50 per cent the February total of 5,477 cars, which in turn was 47 per cent higher than the 3,731 cars produced in the next preceding month. Imports of raw cotton were 10,212,000 pounds compared with 7,074,000 pounds in February, the gain after seasonal adjustment being nearly 22 per cent. The imports of raw wool also showed a marked gain, the total being 1,829,000 pounds compared with 513,000 pounds in February. While wool is normally imported in much greater value in March than in February, the gain in this case was pronounced even after adjustment for seasonal tendencies. Preparations are consequently being made by textile companies for operations of considerable magnitude, contrasting with inactivity in many other industries. Exports of lumber and the output of newsprint showed recession in March after seasonal adjustment. Crude rubber and petroleum, after adjustment, were imported in lesser volume. The low point reached in the new business obtained by the construction industry was one of the reactionary features of the month. The high rates charged for funds for building purposes is acting as a deterrent in the current period. Car loadings were 182,678 in March compared with 174,106 in the preceding month, the gain being less than normal for the season.

*Coal.*—Canadian mines produced 1,024,190 tons of coal in March, a decline of 19.8 per cent from the average output for the month during the past five years of 1,277,383 tons. During March bituminous coal production totalled 702,168 tons, sub-bituminous coal, 38,118 tons, and lignite coal, 283,904 tons. Alberta's output amounted to 393,234 tons or 1.5 per cent above the March, 1931, total of 387,512 tons. Nova Scotia mines produced 369,092 tons during March, a decrease of 14.3 per cent from the output of 430,852 tons recorded in the previous year. British Columbia operators reported a production of 160,100 tons as

against 153,241 tons in the corresponding month of 1931. Saskatchewan's output continued at a high level and totalled 32,036 tons; in March, a year ago, 62,666 tons were mined. New Brunswick produced 19,723 tons as compared with 16,030 tons in March, last year. Canada imported 711,522 tons of coal during March, 38.9 per cent falling off from the five-year average for the month of 1,163,675 tons. Customs' records show that 222,253 tons of anthracite coal were imported in March; the United States supplied 96.4 per cent of the tonnage and Great Britain the remainder. Bituminous coal receipts totalled 489,046 tons made up of 483,718 tons from the United States and 5,328 tons from Great Britain. British Columbia importers brought in 223 tons of lignite coal from the United States during March. Exports of coal from Canada continued at a low level amounting to 27,380 tons as compared with the March, 1927-1931 average of 65,678 tons.

Canada's coal supply in March totalled 1,708,332 tons, a decline of 28.1 per cent from the five-year average for the month of 2,375,382 tons. Coal made available during the month was drawn from the following sources: Canadian mines, 58.4 per cent; the United States 40.8 per cent; and Great Britain, 0.8 per cent. The month's supply consisted of 222,253 tons of anthracite coal, 1,165,980 tons of bituminous coal, 38,118 tons of sub-bituminous coal and 281,981 tons of lignite coal.

#### EXTERNAL TRADE.

A summary of Canadian trade in March, 1932, prepared by the Department of National Revenue shows that the merchandise entering Canada for consumption amounted to \$57,437,184 as compared with \$35,586,085 in the preceding month and with \$75,349,854 in March, 1931. The chief imports in March, 1932, were: Iron and its products, \$9,982,742; Non-metallic minerals and products, \$9,690,673; Fibres, textiles and textile products, \$9,401,328.

The merchandise exported from Canada during March, 1932, amounted to \$39,749,307 as compared with \$37,018,792 in the preceding month and with \$55,048,197 in March, 1931. The chief exports in March, 1932, were: Wood, wood products and paper, \$13,864,322; Agricultural and vegetable products, mainly foods, \$9,754,561; Non-ferrous metals and their products, \$5,025,556.

#### Strikes and Lockouts

The time loss due to industrial disputes in April, 1932, showed a substantial increase over that recorded for the previous month, owing to the continuance throughout the month of strikes of coal miners in western Canada

which started towards the end of March. In comparison with the figures for April, 1931, while only one strike less occurred and a small increase only appeared in the number of workers involved, the time loss incurred was almost twice as great, due largely to the above mentioned strikes of coal miners. There were in existence during the month eleven disputes, involving 1,413 workers, and resulting in a time loss of 34,556 working days, as compared with eleven disputes, involving 1,510 workers, and resulting in a time loss of 26,410 working days in March, 1932. In April, 1931, there were on record twelve disputes, involving 1,292 workers and resulting in a time loss of 19,314 working days. At the end of the month there were on record nine disputes involving approximately 1,370 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

#### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly lower at \$7.22 for the beginning of April, as compared with \$7.27 for March; \$8.86 for April, 1931; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. The most important decrease was a substantial fall in the price of eggs, while the prices of beef, veal, pork, lard, rice, evaporated apples, prunes, granulated sugar and potatoes were also lower. A substantial increase occurred in the price of butter. Including the cost of fuel and rent with that of foods the total budget averaged \$17.09 at the beginning of April as compared with \$17.16 for March; \$19.18 for April, 1931; \$21.53 for April, 1930; \$21.30 for April, 1929; \$20.66 for April, 1922; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. Fuel was slightly lower, due to decreases in the prices of anthracite coal. Rent was unchanged in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 again showed a decrease at 68.4 for April as compared with 69.1 for March; 74.4 for April, 1931; 91.2 for April, 1930; 94.5 for April, 1929; 98.4 for April, 1922; 164.3 for May, 1920 (the peak); and 64.0 for April, 1914. In the classification according to chief component materials five of the eight main groups declined, two advanced and one was unchanged. The groups which declined were: the Animals and their Products group, because of

lower quotations for furs, hides, leather, hogs, calves and eggs; the Fibres, Textiles and Textile Products group, due to lower prices for raw cotton, denim, raw silk and raw wool; the Wood, Wood Products and Paper group, owing to reduced quotations for lumber and pulp; the Non-Ferrous Metals and their Products group, mainly because of lower prices for electrolytic copper, lead, silver, tin, zinc and solder; and the Non-Metallic Minerals and their Products group, due to declines in the prices of both anthracite and domestic coal which more than offset higher prices for brick, coal tar and cement. The

Vegetables and Vegetable Products group and the Iron and its Products group were slightly higher, the former because of advances in the prices of barley, oats, peas, bran, shorts, onions and carrots, which more than offset lower prices for rye, wheat, flour, oatmeal, rolled oats and potatoes, and the latter because of higher quotations for steel tank plates, hot rolled annealed steel sheets, scrap iron and steel, which more than offset lower prices for automobile body plates and galvanized steel sheets. The Chemicals and Allied Products group was unchanged.

### RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE constitution of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act to deal with a dispute between various coal operators in the Drumheller district and certain of their employees being members of District 18, United Mine Workers of America, was completed on April 20 by the appointment of Mr. A. Macleod Sinclair, K.C., of Calgary, as chairman, on the joint recommendation of the other board members, namely, Messrs. W. C. Robertson, K.C., and A. J. Morrison, both of Calgary, nominees of the operators and employees, respectively.

Applications for the establishment of Boards of Conciliation and Investigation were reported in the April issue of the LABOUR GAZETTE as having been received from three groups of employees of the Corporation of the City of Winnipeg as follows: (1) teamsters and helpers and employees of the incinerator, being members of the General Workers' Unit of Civic Employees of the One Big Union; (2) electricians, drivers, chauffeurs, labourers, electric operators, apprentices, meter readers, instructors, trimmers, and fuel plant operators, members of the Civic Federation of Employees of the City of Winnipeg, and (3) cable splicers, troublemen, linemen and foremen employed in the city's Hydro Electric Utility and being members of the International Brotherhood of Electrical Workers. The cause of the dispute in each instance was a wage reduction of 10 per cent which had been put into effect by the civic authorities. In the first mentioned case, that of the incinerator employees, the industry concerned was not one to which the Industrial Disputes Investigation Act primarily applies, and a board could, therefore, be established only by mutual consent of the parties concerned. The consent of the city authorities not being forthcoming, no board was established in this case.

Mr. F. E. Harrison, Western Representative of the Department of Labour, spent several days in Winnipeg conferring with the various parties concerned in the three disputes and secured the consent of the City Council to have its Wage Committee negotiate with representatives of the civic employees. During the negotiations the Wage Committee agreed to recommend that the City Council enter into a contract with the Civic Federation of Employees of the City of Winnipeg on the basis of the 10 per cent wage reduction, the agreement to contain clauses stating that the reduction is not to be regarded as necessarily permanent and that, before a general reduction is made of staff or in the number of hours worked by employees, the matter will be discussed with the representatives of the Federation. The application in this case has been accordingly withdrawn.

The city authorities have refused to sign more than the one agreement, that with the Civic Federation, but state that they will treat the other groups of civic employees on the same basis.

In view of the position taken by the city authorities, the application received from the third group mentioned above, i.e., the employees represented by the International Brotherhood of Electrical Workers, was receiving further consideration at the time of publication.

In connection with the superannuation of civic employees at New Westminster, B.C., the City Council on April 25, resolved that the superannuation ages for members of the fire department by 55 years, and 65 years for all other employees except those in the police department. The heads of departments, however, may be retained if their retention is in the interest of the public service.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING THE FISCAL YEAR ENDING MARCH 31, 1932

**D**URING the fiscal year ending March 31, 1932, the services of the Department of Labour were utilized in connection with the adjustment of a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent, or there was difficulty in carrying on negotiations in connection with wages and working conditions. In most cases the proceedings were under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following is a list of the more important cases in connection with which mediation work was performed during the year by the department on request of one or both parties to the dispute and which indicates the good results being obtained by this service.

### Construction

*Winnipeg, Man.*—In April, 1931, Local Union 739, Brotherhood of Painters, Decorators and Paperhangers of America, Winnipeg, Man., informed the Department that their organization had reached a deadlock in negotiations with the master painters over a proposed wages

reduction, and requested that a Board of Conciliation and Investigation be established to deal with the dispute. In reply the union was advised that disputes of the nature referred to did not fall directly within the scope of the federal Industrial Disputes Investigation Act and a Board therefore could be established only with the joint consent of the parties concerned. They were informed, however, that the matter would be brought to the attention of the master painters' association to ascertain if they would be agreeable to having the matter dealt with through Board procedure. This was done, and it was further suggested to the master painters that the Department would be glad to have a conciliator available if so desired with the object of bringing about through discussions with both parties a mutually satisfactory adjustment of the difficulty. The reply received from the master painters made it clear that the Department could not be of service in this instance, and the matter therefore was not proceeded with further.

*Saint John, N.B.*—In the fall of 1930 a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act dealt with a wages dispute between certain of the master plumbers of Saint John, N.B., including those affiliated with the Canadian Construction Association, and certain of their employees, being members of Local 574, United Association of Journeymen Plumbers and Steamfitters, and unanimously recommended that the hourly rate of pay on new work should be increased from 75 cents per hour to 80 cents per hour as from May 1, 1931. Both parties to the dispute had agreed in writing, in accordance with section 63 of the Act, to be bound by the unanimous decision of the Board. Early in June, 1931, the president of the Saint John local union of plumbers and steamfitters complained to the Department that the employers had refused to grant the increase awarded and requested assistance. Shortly thereafter the Chief Conciliation Officer of the Department proceeded to Saint John and arranged a conference between the interested parties, at which he was present. It developed in the discussion that the failure on the part of the master plumbers to make the agreement effective was largely due to a decrease in business and the further fact that a number of small plumbing establishments were paying less than the agreed rate, making it difficult for the larger concerns to meet the competition. After much discussion it was finally agreed that the former rate of 75 cents per hour would continue in effect

for all the ordinary plumbing and steamfitting work, but on work on which the plumbing and steamfitting alone would amount to \$5,000 or more the rate would be 80 cents per hour.

*Vancouver, B.C.*—In April, 1931, the General Contractors' Association of Vancouver endeavoured to open up wage negotiations with various labour organizations, including the Amalgamated Carpenters of Canada, Local No. 452 of the United Brotherhood of Carpenters and Joiners of America, and the Bricklayers' and Masons' International Union, with the object of making reduced wages effective. No particular headway was made through the conferences and negotiations which followed. The union organizations contended that the existing agreements were in effect until April 1, 1932, but the General Contractors' Association maintained that the agreements had been broken and finally gave notice that they would no longer be bound by them. On January 15, 1932, the contractors for the construction of the new Canadian National Railways hotel notified the carpenters and bricklayers in their employ that, effective January 18, carpenters' wages would be reduced from \$8 to \$6.80 per day, and bricklayers' rates from \$10.80 to \$9.50 per day. This resulted in the carpenters and bricklayers ceasing work and the building was picketed. The Western Representative of the Department of Labour interested himself in the dispute and brought about conferences between the General Contractors and the unions involved, at which he was present. As a result it was agreed that work would be resumed at once, the present hourly rate of \$1 for carpenters maintained until April 1, and that in the meantime conferences would be continued in an effort to bring about an agreement as to wages beyond that date. The bricklayers agreed to accept a daily rate of \$9.80. Work was resumed by both carpenters and bricklayers on February 3.

### Fishing

*Halifax, N.S.*—On January 26, 1932, a committee representing the employees of the Leonard Fisheries Limited, Halifax, N.S., called upon the Eastern Representative of the Department stationed at Halifax, informed him that the company had put into effect a wages reduction, and requested the assistance of the Department in having the former scale restored. It was stated that if the former rate was not restored a strike would take place on the following Thursday, January 28. The representative immediately got in touch with the manager of the company and as a result of the conversations which took place the manager agreed to revert to the former rate.

### Manufacturing

*Barnet, B.C.*—The employees of the Barnet Lumber Company, Limited, Barnet, B.C., said to number 350, ceased work on July 27, 1931, in protest against a bonus system put into effect by the company. It is understood that the work was tied up only for a few hours, operations being resumed after the company agreed to revert to the former system of paying its employees.

On Wednesday morning, September 23, the employees went on strike, due, it is alleged, to the proposal of the company to put into effect a further wage reduction. The information of the Department was that during the preceding year three wage reductions had already been made. The Western Representative of the Department at Vancouver called upon the general manager of the company on the afternoon of September 24 to ascertain the full facts of the difficulty, and during the discussion offered the services of the Department towards bringing about a settlement of the dispute. While welcoming this suggestion the general manager stated that in his opinion the time was not yet opportune for such action. Governmental assistance was requested by the reeve of the municipality of Burnaby, in which municipality the Barnet Lumber Company's plant is located, and accordingly on September 29 the Western Representative of the Department, accompanied by the Deputy Minister of Labour for British Columbia, again discussed the situation with the manager of the company. As the manager still contended that the time was not opportune for outside intervention no headway was made and it was therefore decided to leave the matter in abeyance. On October 14 these two officers again interviewed the manager of the company and were informed that he was not in a position to offer any proposal towards a settlement of the dispute until such time as his company had made an arrangement for further financial support, mentioning that during the preceding four months the company had suffered heavy financial losses on its operations. At a further conference between the same parties on October 24 the situation had not changed, and subsequent reports indicated that the company had gone into bankruptcy. At the end of 1931 there was no likelihood of the plant being reopened for some considerable period. In this instance it is said that the workmen concerned were members of the Lumber and Agricultural Workers' Industrial Union.

*St. Boniface, Man.*—On Friday, September 11, 1931, the employees of the Dominion Wheel and Foundry Company Limited, St. Boniface,

Man., went on strike, due, it is alleged, to a notice being given by the company of a further wages reduction and the laying off of a number of the employees. The plant was immediately picketed by the strikers who were actively supported by the Workers' Unity League of Winnipeg. The entire St. Boniface police force, reinforced by twenty provincial police, were posted at the foundry as a precautionary measure. The Mayor of St. Boniface was keenly interested in the situation and requested that the federal Minister of Labour should send an officer of the Department to St. Boniface in an endeavour to bring about a settlement of the difficulty. On September 15 the Chief Conciliation Officer of the Department, who was at that time in Western Ontario, was instructed to proceed to St. Boniface at once and he arrived in Winnipeg at noon on Thursday, the 17th. He immediately proceeded to St. Boniface to discuss the situation with the Mayor, who was familiar with all the circumstances. After the discussion with the Mayor the departmental officer got in touch with the committee representing the men and arranged for a conference with them the same afternoon, at which conference the Winnipeg representative of the Department was also present. Later on the same afternoon a conference took place between the departmental officers and the general manager of the Dominion Wheel and Foundry Company and all avenues leading to the possibility of an adjustment of the difficulty were canvassed. No particular headway was made at that time with the manager, but it was agreed that a further conference would be held the following afternoon, the 18th, at the company's office in St. Boniface. During this latter meeting a basis of settlement which the departmental officers anticipated would be acceptable to the employees was reached, and a committee representing the employees was called in and the proposition outlined to them. From the discussion which took place it seemed evident that the men would accept the settlement as outlined but they stated it would be necessary for them to take the matter up with the employees concerned before a definite answer could be given. It was therefore agreed that a meeting would be called early that evening and word given later as to the outcome. About 9 p.m. the same evening the employees' committee called upon the departmental officers at their hotel and informed them that the proposed settlement was acceptable to the employees. It was therefore agreed that the pickets would be removed from the company's property at once, which was done at 10 p.m., and the men resumed work the following day.

*Montreal, P.Q.*—On October 1, 1931, fourteen employees of the Wolofsky Dress Company, Montreal, P.Q., said to be members of the Industrial Union of Needle Trades Workers, ceased work in protest against a reduction in piece work rates affecting two pressers. The following morning, October 2, four more employees also ceased work. While the shop was not completely tied up it is said that the output was affected. On October 22 the Montreal representative of the Department was successful in bringing about a conference between the manager of the company and the representative of the Industrial Union of Needle Trades Workers at his office, and after considerable discussion a settlement was reached. It was agreed that all the strikers would be taken back unconditionally but the wage reduction in respect to the two pressers remained in effect.

*Winnipeg, Man.*—On Monday, October 5, 1931, twenty-eight employees comprising the entire staff of the Bentwood Chair and Table Company, Elmwood, went on strike as a protest against a cut of 5 per cent in wages put into effect by the company on October 1. On the following Wednesday morning the Mayor of Winnipeg requested the Winnipeg representative of the Department to endeavour to bring about an adjustment of the dispute, and upon receipt of this request the representative ascertained that his services would be acceptable to both parties. He thereupon proceeded to Elmwood and had numerous interviews with the owners of the plant and representatives of the employees concerned. These interviews continued throughout the day and until late in the evening by which time the Department's representative was able to bring the two parties together. As a result of these efforts an agreement acceptable to both parties was signed the following morning which, among other things, provided for the return to work of all strikers without discrimination and the withdrawal of the wage cut. The men returned to work the same afternoon. From the commencement of the strike the plant was picketed by approximately 200 strikers and sympathizers. There was also a strong police force guarding the plant in case of emergency.

*Port Moody, B.C.*—On the morning of October 7, 1931, 143 employees in the sawmill of the Thurston-Flavelle Lumber Company Limited, Port Moody, B.C., went on strike. It is stated that about 200 men from Vancouver, not employees of the mill, appeared at the plant and prevented the regular employees from going to work. It is also stated that no previous notice of an intended strike had been given. It is further under-

stood that the question of wages was not involved but that the object of the strike was to enforce union recognition and the reinstatement of 4 employees who some time previously had been dismissed. The Western Representative of the Department, accompanied by the Deputy Minister of Labour for the Province of British Columbia, proceeded to Port Moody on the same day and interviewed the manager of the company in regard to the difficulty. It was ascertained that the employees had arranged to call a mass meeting at once to discuss the matters at issue and under these circumstances it was decided to await the results of the meeting before making an effort towards conciliation. The meeting referred to took place on October 8 and resulted in the men deciding to return to work immediately, the mill resuming operations at 2.30 the same afternoon.

*Montreal, P.Q.*—On February 19, 1932, approximately 1,500 workers employed by some twenty-five women's clothing factories operating in Montreal went on strike against a wage cut of 10 per cent and to retain the closed shop. The agreement between the International Ladies' Garment Workers' Union and the manufacturers of women's clothing, suits, etc., had expired at the beginning of the year. The Department's Montreal representative interested himself in the matter and his efforts had considerable to do with the solution of the difficulty which was reached on February 20. It was agreed that the workers would accept the lower rate of wages on condition that the closed shop would be retained. Work was resumed on February 22, a new agreement to the above effect to be signed.

### Mining

*Westville, N.S.*—An application for a Board of Conciliation and Investigation was received in the Department on July 25, 1931, from the employees of the Intercolonial Coal Company, Westville, N.S., said to be members of the Mine Workers' Union of Canada, Local No. 50, to deal with certain alleged conditions contrary to their agreement with the company. Early in August the Chief Conciliation Officer of the Department visited Westville and after discussions with officers of the local union and company officials the departmental officer felt that the matters in dispute could be adjusted without the necessity of board procedure. Arrangements were therefore made for further direct negotiations between the parties concerned and it has not proved necessary to establish a Board.

*Estevan, Sask.*—A strike of coal miners in Saskatchewan in the vicinity of Estevan began on September 7, 1931, and continued until

October 7 when an agreement for a resumption of work pending the result of an enquiry by a Royal Commission was reached following conferences of the parties to the dispute with the Commissioner's counsel. The dispute involved approximately 600 miners, of whom about 200 were working when it occurred. The strike was called by the Mine Workers' Union of Canada which had recently organized the coal miners in the district. The mine operators refused to negotiate with or recognize the union. Efforts had been made by the provincial authorities to bring about a resumption of work but without success. Subsequently the Chief Conciliation Officer of the federal Department of Labour was despatched to Estevan to bring about, if possible, a resumption of work pending the enquiry. Upon arriving at Estevan on September 21 the departmental officer met the mine operators and obtained from them an undertaking in writing that if the miners would return to work pending the report of the Royal Commission all employees who had been working at the time of the strike would be re-employed without discrimination. Representatives of the miners agreed to waive recognition of the union and resume work pending the enquiry if a number of specified grievances were immediately remedied by negotiation between the eight operators and a committee of three miners from each mine. These grievances included allegations as to abuses in certain instances in connection with purchases in company stores, check-weighing, non-payment of wages for repair work, prices of powder, and various other matters. The operators agreed to this and to remedy any such conditions; but the local president and secretary of the union then claimed that their representatives in these arrangements had no authority to agree to such terms. They insisted that there should be no resumption of work pending the enquiry unless the operators agreed to meet union representatives as well as employees and to negotiate a higher wage scale and to remedy other grievances. No settlement having been arrived at the Conciliation Officer left the vicinity for a conference with the provincial authorities in Regina.

### Transfer and Public Utilities

*Kentville, N.S.*—In the report of the Board of Conciliation and Investigation under date of April 11, 1931, dealing with the application of certain employees of the Dominion Atlantic Railway, said to be clerks, freight handlers, and station and stores department employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for increased wages and improved working conditions, it was stated

that in the opinion of the Board proper officials of the Department of Labour could and should be of material assistance to the parties to this dispute in determining the employees who should be excepted from the proposed arrangement. Subsequently the Chief Conciliation Officer of the Department discussed the matter above referred to with representatives of the employees in Montreal, and later with the vice-president and general manager of the Dominion Atlantic Railway in Nova Scotia. As a result of these discussions a basis was found for a renewal of direct negotiations between company officials and union representatives of the employees concerned. No word to the contrary having since been received it is assumed that the questions in dispute have been disposed of satisfactorily.

*Saint John, N.B.*—On July 27, 1931, the Department received an application for a Board of Conciliation and Investigation from certain employees of the New Brunswick Telephone Company, Limited, said to be members of the Telephone Workers' Association of New Brunswick, who were protesting against a proposed wages reduction. There were 170 directly affected and 340 indirectly affected. This application received prompt attention and the Chief Conciliation Officer, accompanied by the Department's Eastern Representative, visited Saint John. Several conferences were held with representatives of the employees as well as with the company officials, an agreement was reached, and the Board application was withdrawn.

*Montreal, P.Q.*—On Wednesday, August 5, 1931, there occurred a strike of linemen and helpers, members of the Canadian Electrical Union of Linemen and Helpers, Local No. 1, in the employ of the Montreal Light, Heat and Power Consolidated, involving some 200 men, 50 of whom carried on with the company without cessation of work. The strike, it is said, was brought about by the refusal of the company to enter into an agreement which would give recognition to the union. The company was, however, willing to enter into an agreement with its own employees. The matters of wages, hours and conditions of employment were not in dispute. The employees concerned did not approach the Department for assistance prior to the strike but on Monday morning, August 10, representatives of the union called upon the Department's Montreal representative and outlined the situation. The committee had in mind that a Board of Conciliation and Investigation might be established to deal with the matter but it was made known to them that the dispute in question did not come directly within the scope of the Industrial Disputes Investigation Act, and under

such circumstances a Board could only function by the joint consent of the parties concerned. Finally the committee suggested that the Department's Montreal officer should approach the company with the object of having the company comply with the original demand for a written agreement with the union, and the officer agreed to interview the company officials in the hope that a compromise settlement might be obtained. The same afternoon the Department's representative called at the company's office and had an interview with the managing director, the general manager and the general superintendent. These officials adhered to the stand taken by the company not to sign any agreement with the union or representatives, but intimated that they would consider an agreement with the company's employees only. The company officials made it clear that there were a number of strikers who would not be taken into the employ of the company again, but that they were willing to receive applications from individual men then on strike. At subsequent meetings between an official of the company and a committee of the men held in the Department's Montreal office the company's position was definitely made known, that is, that the men desiring to return to work were to make application at the company's employment office and each application would be dealt with separately; that there was no guarantee that all applicants would be taken back; general assurance was given that vacancies would be filled as quickly as possible, and that the men would not be discriminated against simply because they were on strike, the company being anxious to restore harmonious relations. These conditions of reinstatement were reported back to the men who accepted them and at noon, August 21, the strike was terminated.

*Quebec, P.Q.*—On December 1, 1931, the Department received word from the Quebec Railway, Light and Power Company that negotiations between the company and certain groups of their employees, namely, trainmen, maintenance of way employees, and telegraphers and agents, on the company's proposal for a wages reduction had reached a deadlock. The company, it was intimated, was therefore confronted with the necessity of making applications for Boards of Conciliation and Investigation to deal with these disputes. It was suggested by the company that as the Department had been of considerable service in finding solutions of wages difficulties on previous occasions, the Department might consider it advisable to send an officer to Quebec at this time. The Chief Conciliation Officer, accompanied by the Department's Montreal representative, proceeded to Quebec

promptly and held a number of conferences with the company officials and also with certain representatives of the employees. After ascertaining the full facts of the situation certain suggestions were made to the parties concerned as to a basis of direct settlement and it was anticipated that these suggestions might prove acceptable. As further consideration had to be given to the matters by those directly concerned the departmental officers returned to their respective headquarters. Shortly thereafter the trainmen settled their dispute by direct negotiations with the company, but in the case of the maintenance of way employees and the telegraphers and agents the company made applications to the Department for Boards of Conciliation and Investigation. Upon receipt of these applications the departmental officers referred to above conferred with the vice-presidents of the Maintenance of Way Employees and the Order of Railroad Telegraphers and discussed fully all angles of the situation. It was agreed that the two vice-presidents should proceed to Quebec and endeavour to find a solution of the difficulty by direct negotiations rather than through Board procedure. This undertaking was carried out and shortly thereafter the Department received advice from the company to the effect that settlements had been reached with the two groups of employees. The applications for Boards of Conciliation and Investigation in both instances were withdrawn.

*Winnipeg, Man.*—Early in January, 1932, a strike of the motormen, conductors, busmen, mechanical department employees, trackmen and gas workers, members of the Railway Employees' Units, One Big Union, and employed by the Winnipeg Electric Company, appeared to be imminent. The dispute arose as a result of the employees refusing to accept a wage reduction of 10 per cent recommended by a Board of Conciliation and Investigation. The Department instructed the Chief Conciliation Officer to proceed to Winnipeg in case his services might be helpful. Arriving in Winnipeg the departmental officer immediately got in touch with the Mayor and discussed with him all phases of the situation. Later on he had conferences with representatives of the employees and with the company officials. During this period he co-operated fully with the mayor who was taking a keen and active interest towards finding a basis of settlement. On the afternoon of January 12, as a result of direct negotiations between company officials and a committee representing the employees, a temporary solution of the difficulty was found and an immediate strike was averted. On the day following the Chief Conciliation Officer returned to Ottawa but within a few

days unexpected difficulties again arose which indicated that a strike would occur. The mayor again interested himself in the matter and it is understood that largely due to his efforts negotiations were reopened between the company officials and representatives of the employees which resulted in a signed agreement.

*Winnipeg, Man.*—On December 28, 1931, the Department received an application for a Board of Conciliation and Investigation from members of the International Brotherhood of Electrical Workers in the employ of the Winnipeg Electric Company to deal with a dispute arising out of a notice given by the Company of a 10 per cent reduction in wages as from November 1, 1931. A number of conferences had been held between representatives of the employees and officials of the company but without satisfactory results. The Chief Conciliation Officer of the Department was in Winnipeg on other matters early in January, 1932, and while there held conferences with representatives of the employees as well as with the company officials, and arranged for further joint conferences to be held directly between the parties concerned, with the object of finding a settlement of the dispute without the necessity of Board procedure. These conferences took place and as a result a new agreement was reached which provided, in so far as wages were concerned, that for employees, the nature of whose employment was such that it would likely be continuous and from which they would not likely be laid off from time to time, a 10 per cent reduction in wages would be effective from February 1, 1932, and for employees whose work was not continuous but who were subject to pay-off from time to time, a 7 per cent reduction would be effective from the same date. An agreement having been reached the application for a Board was withdrawn.

*Hull, P.Q.*—Failing an agreement by direct negotiations the Hull Electric Company during the latter part of January, 1932, applied for a Board of Conciliation and Investigation to deal with the company's proposal for a 10 per cent wages reduction and an adjustment in working hours owing to the earnings of the company having been substantially reduced. The employees concerned were motormen, conductors, trackmen, etc., members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. Subsequently a number of conferences were held between officers of the Department and the management of the company, also with a committee representing the employees, with the object of finding, if possible, a basis of settlement without Board

procedure. Finally the general manager of the company intimated to the Chief Conciliation Officer that the company would, without prejudice, be agreeable to making slight concessions and it was proposed that employees receiving 45 cents and over per hour should receive and hourly reduction of 4 cents; employees receiving 35 cents to 44 cents inclusive should receive 3 cents per hour less, and those receiving 34 cents per hour and under should receive 2 cents per hour less, making a reduction of approximately .8 per cent. In addition the manager intimated that he would be prepared to give a new agreement on this basis as from January 1, 1932, to January 1, 1933, the wages reduction, however, being effective only from February 15, 1932. This proposal was made known to the committee representing the employees, but was not acceptable to them. As the company was not prepared to make further concessions a Board was established to deal with the matter.

### Miscellaneous

*Montreal, P.Q.*—Motion picture projectionists, members of Local 262, International Alliance of Theatrical Stage Employees and Moving Picture Operators, and employed in twenty-one theatres in Montreal, were locked out on August 26, 1931, on account of the local union refusing to work two motion picture projectors and talking picture equipment with one man alone in the projection room. The representative of the employees requested the assistance of this Department in the matter and the Department's Montreal officer was instructed to see what could be done. It developed, however, that the employees concerned insisted upon union recognition and certain other concessions before returning to work, whereas the theatre management refused to make any concession whatever, not even to the extent of meeting a committee to discuss the situation. Under these circumstances the Department was not able to be of any real assistance.

## DISPUTES AND AGREEMENTS IN COAL MINES IN NOVA SCOTIA AND ALBERTA

### Nova Scotia

THE last issue of the LABOUR GAZETTE contained (page 392) an account of the proceedings following the report of the Royal Commission on Coal Mining in Nova Scotia, appointed by the Provincial Government, the text of which was printed in the issue for March. The Commission had recommended a ten per cent reduction in wages for employees paid by the day, and a reduction of 12½ per cent for contract miners paid by the ton, yard, etc., no adult to be paid less than \$3.25 per day. The miners had voted on March 14 against accepting this wage reduction which was put into effect on March 15, but they continued to work pending further negotiations.

The Commission had also recommended that work in the collieries should be re-allocated, certain collieries being closed in order to reduce average costs per ton and provide for steadier employment of miners. As this would displace about two thousand miners in 1932 and five hundred more in 1934, the Commission commented favourably on a suggestion for the settlement on land of miners who had farming experience with financial assistance. During March the provincial government introduced legislation to establish a Board for the settlement on farms of miners and other unemployed. On April 19 the government appointed this Board and opened an office at Glace Bay, temporarily in charge of the

Superintendent of Land Settlement in the Department of Agriculture. The Act provides for financial assistance to any male person, head of a household, being a British citizen, 21 years of age, resident in Nova Scotia at least two years immediately prior to the date of application, who had been employed in the coal industry in Nova Scotia for a total period of not less than five years.

At the end of April, by Order in Council, the Dominion Government amended the conditions under which financial aid was given to increase the use of Nova Scotia coal in the manufacture of coke and to promote shipments west of Montreal, thus putting into effect the policy decided upon in consultation with the Premier of Nova Scotia, following the issue of the report of the Royal Commission. These measures, as stated in the last issue of the LABOUR GAZETTE were expected to increase the consumption of Nova Scotia coal by at least one million tons. An order for 150,000 tons was forthwith placed by a Montreal producer of coke which had not previously used Nova Scotia coal.

Following the miners' rejection of the proposals for a general wage reduction, the officers of the union, the United Mine Workers of America, District 18, summoned a special district convention at New Glasgow on April 18 (an account of this convention appears on another page of this issue). The District

Board, as prior to the vote on March 14, recommended accepting the wage reduction under the circumstances, but the convention voted against the proposal and directed the executive to enter into negotiations to secure the demands adopted at the convention in June, 1931, including wage increases; the result to be submitted to a vote of the membership and a strike called in the event of an adverse vote.

### Alberta

The principal coal mines in Alberta have been operated under agreements terminating March 31, 1932, with committees of employees, with the United Mine Workers of America, with the Mine Workers' Union of Canada, or with independent unions. In the adjoining Crow's Nest Pass District in British Columbia, near Fernie, the agreement in force since 1928 between the operators and the union (independent), had been renewed last year until March 31, 1933. In the Crow's Nest District in Alberta the principal mines had been operated under agreements between the several operators and committees of employees, but the miners near Blairmore and Coleman have been on strike since February and March respectively and new agreements had not been negotiated by the end of April as stated elsewhere in this issue in the article on Strikes and Lockouts in Canada, April, 1932.

In accordance with resolutions adopted at a conference of miners belonging to their own and other organizations called by the Mine Workers' Union of Canada at Lethbridge on March 22, the union took a vote of miners throughout the province in regard to calling a strike against any wage reductions that might

be proposed. In several districts the miners did not vote as the operators had not proposed any reductions in wages, and out of approximately 9,000 miners in the province less than 4,000 were reported to have voted. The figures published by the Mine Workers' Union of Canada in its official journal *The Canadian Miner*, April 21, 1932, were 2,025 in favour of a strike, 467 against, and 24 spoiled ballots.

The agreements in most of the mining districts have been renewed without any change in wages. At Lethbridge the agreement for the Galt mines between the Canadian Pacific Railway Company and the Lethbridge Miners' Union, an independent union since 1931, expiring March 31, 1932, has been renewed for two years. At Shaughnessy, near Lethbridge, the agreement with a committee of employees reached as a result of a strike on January 15, 1930, has been renewed until March 31, 1934. At Canmore and Nordegg the agreements between the operators and committees of employees have been renewed, the union, the Mine Workers' Union of Canada, as in previous agreements, not being recognized. In the Red Deer Valley, the mines near Drumheller have been operated under agreements between the operators and the United Mine Workers of America, expiring March 31, 1932. A Board of Conciliation under the Industrial Disputes Investigation Act, as stated in the last issue of the *LABOUR GAZETTE*, (page 390) was established early in April following applications from the union and from the employers. The union had proposed a ten per cent increase in wages and the employers had contended for a decrease of about twenty per cent.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1932

THE number of strikes and lockouts in existence in Canada during April was eleven, the same number as in the preceding month. The figures recorded as to numbers of workers involved showed a very slight decline, but owing to the continuance throughout April of several strikes of coal miners in western Canada involving some 1,200 workers, two of which began toward the end of March, the time loss recorded showed a substantial increase over that for March. In comparison with the figures for April, 1931, while only one strike less occurred and a small increase only appeared in the number of workers involved, the time loss incurred was almost twice as great, due largely to the above mentioned strikes of coal miners.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Apr., 1932...	11	1,413	34,556
*Mar., 1932...	11	1,501	26,410
Apr, 1931...	12	1,292	19,314

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a sepa-

rate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving approximately 1,350 workers, were carried over from March (the dispute involving coal miners at Robb, Alta., having been reported terminated too late to be so entered in the detailed list for March), and three disputes commenced during April. Of the eleven disputes in progress during the month, two were recorded as terminated, both having resulted in favour of the employer concerned. At the end of April, therefore, there were nine disputes recorded as strikes or lockouts in progress, namely: lumber workers, Campbell River, B.C., coal miners, Blairmore, Alta., coal miners, Bellevue, Alta., two disputes of coal miners at Coleman, Alta., motion picture projectionists, Winnipeg, Man., cap and millinery workers, Montreal, P. Q., lithographers, Toronto, Ont., and carpenters, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to nine such disputes, namely: motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo-engravers, Toronto, Ont., March 23, 1931, one employer; photo-engravers, Toronto and London, Ont., Montreal and Quebec P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Montreal, P.Q., August 27, 1931, one employer; sawmill workers, Barnet, B.C., September 23, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; lumber workers, Campbell River, B.C., December 3, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; and compositors, Saskatoon, December 14, 1931, one employer, the last two being added this month.

A minor dispute, an alleged lockout, involving four printing compositors in one establishment in Regina, Sask., dating from November 21, 1931, has been recently reported to the Department. The employees involved were immediately replaced but the union has not declared the dispute terminated, and it is, therefore, included in the list of such disputes in a previous paragraph.

In the April issue of the LABOUR GAZETTE reference was made to two disputes occurring some time ago, involving employees in two women's clothing factories in Montreal, as to which details had not reached the Department. It appears that these two establishments were operated under the agreement between the International Ladies' Garment Workers' Union and the manufacturers of women's cloaks, suits, etc., which expired at the end of 1931. The proprietors of these two establishments refused to renew the agreement; and their employees were called out on December 1, 1931, in one case, and on January 15, 1932, in the other, but they were replaced within a short time.

Reference was also similarly made to a dispute involving fur workers in one establishment in Toronto. This establishment was also operated under an agreement between the union and the employers' association. The employer made a reduction in wages which, however, did not bring them below the minimum rates of the agreement. The employees ceased work on December 24, 1931, but during March the union terminated the strike, work to be resumed under the conditions of the agreement; the members of one local, however, refused to return to work and declared the strike still in force. Employment conditions are reported to be no longer affected, so that the dispute is recorded as terminated.

A number of disputes have been reported during the month involving men on unemployment relief work, in all cases receiving subsistence for which some work was performed or might be required. As no relation of employer and employee was involved these are not included in the record. No disputes involving unemployment workers, employed at stated wages, have been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, ROBB, ALTA.**—Information was received during April that this dispute, commencing December 12, 1931, had terminated at the end of March, a number of the strikers having returned to work early in the year as previously reported, the rest being replaced by other workers from time to time.

**COAL MINERS, BLAIRMORE AND BELLEVUE, ALTA.**—In connection with this dispute, although the agreement between the company and a committee of employees as to wages and working conditions for each mine did not expire until March 31, the miners had been on strike since February 23 and February 24 respectively against the dismissal

of one employee at Blairmore. The miners involved were members of the Mine Workers' Union of Canada which had not been formally recognized by the operators. During April a report was received from the union stating that the principal cause of the strike was a dispute as to equal division of work among the miners. During the month negotiations were opened between the company and representatives of the employees, a demand for recognition of the union being refused. At the end of the month the strike was, therefore, untermminated. Early in May it was reported that the company had attempted to open the mine at Bellevue and that in a clash between the pickets and police

a number of persons were injured, and some arrests were made. It is reported that negotiations for a settlement commenced on May 6.

**COAL MINERS, COLEMAN, ALTA.**—In these two disputes, commencing March 18 and March 19 respectively (the latter being in sympathy with the former), no settlement had been reached by the end of April. The agreements between each company and a committee of its employees, under which the union was not recognized, expired on March 31. It is reported that no negotiations were opened for the settlement of the dispute or for new agreements, the employers refusing to negotiate as the committee included miners who

### STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to April, 1932</b>			
<b>LOGGING—</b> Lumber workers, Campbell River, B.C.	68	1,000	Commenced Feb. 6, 1932, for increase in wages and reduction in board; untermminated.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal miners, Robb, Alta.....			Commenced Dec. 12, 1931; against discharge of worker and charging for lamps alleged to be in violation of agreement; terminated March 31, 1932; in favour of employer.
Coal miners, Blairmore, Alta..	300	7,800	Commenced Feb. 23, 1932; against dismissal of worker; untermminated.
Coal miners, Bellevue, Alta...	330	8,580	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore Feb. 23; untermminated.
Coal miners, Coleman, Alta..	325	8,450	Commenced Mar. 18, 1932; against alleged unfair distribution of work; untermminated.
Coal miners, Coleman, Alta..	300	7,800	Commenced Mar. 19, 1932; in sympathy with miners on strike at Coleman Mar. 18; untermminated.
<b>MANUFACTURING—</b> Printing and Publishing— Compositors, Saskatoon, Sask.	19	200	Alleged lockout; commenced Dec. 14, 1931; against decrease in wages; working conditions no longer affected by end of April, 1932; in favour of employer.
<b>SERVICE—</b> Recreational— Motion picture projectionists, Winnipeg, Man.	3	73	Alleged lockout; commenced Feb. 27, 1932; re union working conditions; untermminated.
Pin boys (bowling alley), Vancouver, B.C.	24	120	Commenced Mar. 7, 1932; against reduction in piece rates; terminated April 5, 1932; in favour of employer.
<b>(b) Strikes and Lockouts Commencing during April, 1932</b>			
<b>MANUFACTURING—</b> Textiles, Clothing, etc.— Cap and millinery workers, Montreal, P.Q.	7	126	Commenced April 9, 1932; against reduction in wages; untermminated.
Printing and Publishing— Lithographers, Toronto, Ont..	8	112	Commenced April 15, 1932; against reduction in wages; untermminated.
<b>CONSTRUCTION—</b> Buildings and Structures— Carpenters, Toronto, Ont.....	29	290	Commenced April 20, 1932; for overtime rates after 40-hours work according to agreement; untermminated.

had been active in bringing about the strike before the agreement had expired. At the end of April it is reported that the employees had appointed a new committee.

**COMPOSITORS, SASKATOON.**—At the end of April employment conditions appeared to be no longer affected by this dispute, as the majority of the employees affected had returned to work with the permission of the union under open shop conditions; but the dispute had not been called off, and it has therefore been transferred to the list of such strikes and lockouts mentioned in a previous paragraph.

**MOTION PICTURE PROJECTIONISTS, WINNIPEG, MAN.**—This dispute, an alleged lockout commencing February 27 owing to a dispute as to union working conditions, was untermiated at the end of the month. The employer reported that as the International Association of Theatrical Stage Employees and Moving Picture Machine Operators had refused to agree to his proposals to employ two operators instead of three, he had replaced the three former employees with two operators who were members of the Canadian Motion Picture Projectionists' Association. On April 29 it was reported in the press that a temporary injunction had been issued restraining the international union from picketing the theatre and also that the owners of the theatre had filed suit against the union for damages. At the end of the month the dispute was untermiated.

**PIN BOYS, VANCOUVER, B.C.**—Early in April information was received indicating that this dispute, commencing March 7, 1932, had terminated, the strikers having been replaced and employment conditions being no longer affected.

**CAP AND MILLINERY WORKERS, MONTREAL, P.Q.**—On April 9, 1932, seven of the employees in a hat manufacturing establishment ceased work in protest against a ten per cent reduction in wages, to be effective the following Monday. The officers of the union, the International Cloth Hat, Cap & Millinery Workers' Union, have stated in press interviews that the employees had been required to work fifty hours per week for the same wages as for a forty-four hour week. This was denied by the employer, who stated that the establishment was operated in accordance with the minimum wage regulations, which provide for the forty-four hour week. At the end of the month no termination had been reported.

**LITHOGRAPHERS, TORONTO, ONT.**—Lithographers in one establishment in Toronto ceased work on April 15, 1932, protesting against a reduction in wages, transfers having been reduced from \$54 per week to \$45-\$50 and one artist from \$54 per week to \$40. The employer stated that similar reductions had been accepted by the employees in other establishments. The lithographers' union reported that the employer afforded no opportunity for negotiations. At the end of the month no termination had been reported.

**CARPENTERS, TORONTO, ONT.**—Carpenters employed by a sub-contractor on one building ceased work, some on April 20 and others on April 25, because they had not been paid at overtime rates for work on Saturdays and on certain other occasions, as provided in the agreement between the union and the contractors' association (*LABOUR GAZETTE*, April, 1932, page 450). At the end of the month no termination had been reported.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

For the month of March, 32 new disputes were reported and 10 were still in progress from the previous month, making a total of 42 disputes in progress during the month, involving 5,600 workers and with a time loss of 26,000 working days. Of the 32 disputes beginning in March, 4 were over proposed reductions in wages, 9 over other wages questions, 10 over questions respecting the employment of particular classes or persons, 2 over questions of trade union principle and 7 over other questions. Settlements were reached in 23 disputes, of which 8 were in favour of workers, 14 in favour of employers,

6 ended in compromises. In one other dispute work was resumed pending negotiations.

### Czechoslovakia

During the last week of March, strikes of coal miners took place in the northwestern Bohemian coal field and in the Moravian Ostrau district against the proposed dismissal of several thousands of miners. It was reported that 30,000 miners were out on strike at one time. At the end of March, the dispute in the Moravian Ostrau district was settled and the dismissal notices were withdrawn, but the workers agreed to wage cuts of from 4 to 12 per cent. No report of a settlement in the northwestern Bohemian district was received.

### Germany

The number of disputes reported for the fourth quarter of 1931 was 102, involving 268 establishments and 31,111 workers, with a time loss of 255,699 working days for the period.

### Netherlands

A strike in the Twente textile industry involving 14,000 workers began December 14, against a reduction in wages of 5 per cent which was the second reduction within a month and against an increase in the amount of work required. By April 4, work had been resumed on employers' terms, although certain concessions were made to the workers including the postponement of the wage cut for some weeks.

### Poland

Following an award of an arbitration committee made in February authorizing a reduction of 10 per cent in the wages of coal miners in the Dombrowa and Cracow districts, a strike occurred affecting between 20,000 and 40,000 men. This strike was called off March 17, the reduction being accepted by the strikers.

### Sweden

Negotiations before the State Conciliation Commission for a new agreement involving reductions in wages in the paper-pulp industry were unsuccessful and a strike was called off 3,500 workers on February 23, when employers attempted to put into effect reductions in wages of 6 per cent for time work and 12 per cent for piece work. Later the employers closed down certain establishments affecting an additional 5,500 workers and on April 11, after further negotiations had failed, the union called another 5,000 workers out on strike. No report of a settlement has been received.

In the glass industry, a strike of 2,500 workers began March 18, also against wage reductions.

## United States

In February, 42 new disputes began and 52 were in effect at the end of the month. The number of workers involved in all disputes in effect at the end of the month was 43,912 and the total time loss for the month 584,804 working days.

As reported in the April LABOUR GAZETTE, failure to reach new agreements in the bituminous coal mining industry in Illinois and Indiana resulted in the closing down of the mines April 1. In Illinois, operations were discontinued in practically all of the mines including both strip and shaft mines and involving about 65,000 men. In Indiana, only the deep-shaft mines were closed and 20,000 men affected, while the strip mines and the co-operative mines continued to operate pending a settlement of the wage scale. In both of these States, employers had proposed substantial reductions in wages. The dispute in Ohio and West Virginia was also mentioned in the April LABOUR GAZETTE and no settlement has since been reported. Serious disorders occurred in Ohio during April resulting in one death and in injuries to other persons.

The strike of anthracite coal miners in Pennsylvania which began March 14 terminated April 1, when the remaining strikers voted to return to work. The number reported to have been involved in the dispute was 12,000 in the Scranton and Wilkes-Barre district and 2,000 at Pottsville and Shenandoah.

The Royal Commission on Labour in India, in a recent report, recognized the difficulties in the way of introducing a scheme of sickness insurance, but recommended for examination by the Indian Government the outline of a tentative scheme based upon the separate provision of cash benefits by the employer and medical attendance by the State. The Commission also recommended the enactment or maternity benefit legislation throughout India on the lines of schemes now operating in Bombay and the Central Provinces.

The Hon. W. G. Martin, Minister of Public Welfare for Ontario, announced on April 23 that the Ontario Government intended shortly to assume responsibility for the full amount of the provincial share of the cost of old age pensions, thus relieving the municipalities of their present contribution of 10 per cent. The provincial treasury would thus, by payment of 25 per cent, complete the contribution of the Dominion Government, which now amounts to 75 per cent of the entire cost of pensions.

That efforts be made by the Provincial Government towards securing from the Dominion Government an annual contribution to the insurance fund.

That accumulated funds or surpluses be invested in the extension of social services for insured persons, such as providing for the inclusion of dental, ophthalmic, or other beneficial health measures, including the establishment of clinics, laboratory aids to diagnosis, and periodical health examinations; or otherwise as may be deemed advisable.

That the utmost consideration be given to the desirability of providing a dental service as speedily as possible.

That the management and administration of all business connected with the scheme be under the control of a Central Board or Commission responsible to the Legislature of the Province, and that the Central Board be empowered to set up such local regional committees as may be conducive to the successful district operation of the system with an especial view to autonomously directed funds, but a centralized system of insurance forming only one accounting unit, all contributions to be paid to a central insurance fund.

That such regional committees shall comprise representatives of insured persons, employers, the medical profession, municipalities, and such other interested organizations as may seem calculated to assist the furtherance of the scheme, but with the right always to the Central Board to refuse or reject any individual representative for good cause.

That such regional committees have discretion, according to the exigencies of each

particular case, to determine whether the maternity benefit shall be granted in cash or in kind, or partly one and partly the other.

That power be given the Central Board to make arrangements with general medical practitioners for the medical and surgical treatment of insured persons for a capitation or an attendance fee, accordingly as may be best arranged for any particular district; and that reasonable freedom of choice be allowed insured persons in selection of practitioners.

That in the case of attendance contracts with practitioners a scale of fees be established to prevent "over-attendance" as well as excessive fees.

That, in order to build up a benefit disbursement fund, there is established in the first year of operation such waiting period as may be necessary to place the insurance institution in funds of not less than \$200,000.

That the cost of medical aid now administered under the Workmen's Compensation Board be borne by the State health-insurance fund, thereby eliminating the present medical-fund levy made upon workmen and employers by that Board.

That sums paid as contributions by employer and employee be deducted from the total income of such persons for purpose of taxation on income.

That, in order to ensure no lapse of information as to world sickness-insurance law and practice as from the conclusion of our inquiry, the Department of Labour take over and continue the subscription of our Commission to the International Labour Office's "Legislative Series" and *Industrial and Labour Information*.

## ANNUAL CONVENTION OF THE INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

THE Industrial Accident Prevention Associations of Ontario held their annual convention at Toronto during April. Mr. C. Gordon Cockshutt of Brantford, chairman of the convention committee, commented on the remarkable attendance from all parts of the Province, the delegates numbering 1,055. The large attendance was considered to indicate that industrialists are interested in accident prevention and will send representatives to attend a convention when results are in evidence. The Convention opened on April 21 with registration and a safety exhibit, the first speaker being Mr. Elmer Davis of Kingston, immediate past president of the Canadian Manufacturers' Association, who told of results achieved in his plant by careful attention to accident prevention work. His address was followed by the Annual General Meeting of the Associations, at which the report of the general manager, Mr. R. B. Morley, on the activities of the organization on the past year was presented, the financial statement being discussed by the honorary-treasurer, Mr. W. S. Campbell, of Toronto.

The officers elected were: Messrs. C. G. Cockshutt, Slingsby Manufacturing Company, Brantford, president; P. J. Wood, Canadian Bank Note Company, Ottawa, first vice-president; O. H. Shenstone, Massey-Harris Company, Toronto, second vice-president; and W. S. Campbell, Canadian General Electric Company, Toronto, honorary-treasurer.

Mr. Harry Guilbert, safety director of the Pullman Company, Chicago, showed how, over a period of five years, the Pullman Company had dealt consistently with the joint question of accident frequency and accident severity and had made a remarkable reduction in both. Their work included safety education, charts, awards, meetings, work by safety committees, bulletins and special investigations. In the five years 1927 to 1931 they had made a reduction of sixty-two per cent in the number of accidents.

Ten class safety associations held their meetings on April 21, and interested groups of executives discussed practical problems relating to their classes of industry. Each meeting had its own program, but subjects fairly com-

mon to all were discussed at most of them, including safeguarding machinery, adequate first aid and interesting employees in safety. In each case the business portion of the meeting was carried through under the direction of the class chairman and a subsequent meeting of the newly-elected directors held.

At the annual banquet Mr. F. M. Morton, of Hamilton, was in the chair and reviewed briefly the activities of the organization in the past year, paying special tribute to the Workmen's Compensation Board for their co-operation. Mr. S. N. F. Chant, M.A., Assistant Professor of Psychology, University of Toronto, spoke on "Some Psychological Aspects of Accident Prevention," and considered eight items which he said constituted personal factors contributing to accidents; these eight were sensory deficiency, motor deficiency, fatigue, lack of skill, inattention, excitability, poor judgment and lack of responsibility. He suggested three points of attack for industry: a careful selection of employees, enlightened management and safety education.

Hon. W. G. Martin, Minister of Public Welfare, spoke on the whole situation of accident prevention, and congratulated Mr. V. A. Sinclair, chairman of the Workmen's Compensation Board, on the work of that body.

The morning session on April 22 was opened under the chairmanship of Mr. R. T. Herdegen, of Walkerville, the first speaker being Mr. A. J. Harvey, Lever Brothers, Toronto, whose subject was "Safety Work in East Toronto." Both Mr. Harvey and Mr. E. E. Sparrow of the Imperial Varnish & Color Company, Toronto, who followed, told of the good work being done by the Toronto East Division of the Associations.

Two representatives of the Wentworth Division, Mr. R. J. A. Curry, Steel Company of Canada, Hamilton, and Mr. F. H. Rutherford, B. Greening Wire Company, Hamilton, told of the activities of the Wentworth Division and the excellent results achieved through a series of meetings and careful inspection work.

Mr. M. E. Shoveller of the Ontario Refining Company, Copper Cliff, dealt with "Modern Methods in Safety," and gave the story of the work carried on by his company. Mr. G. A. Kuechenmeister, Dominion Forge & Stamping Company, Walkerville, representing the Essex-Kent Division of the Associations, gave an answer to the query "Accident Prevention—Whose Job is it?" outlining the activities of that Division.

At the luncheon meeting on April 22, under the chairmanship of Mr. C. G. Cock-

shutt, of Brantford, the newly-elected president of the Associations, the first speaker was Mr. V. A. Sinclair, K.C., chairman of the Workmen's Compensation Board. Mr. Sinclair dealt at length with recent amendments to the Workmen's Compensation Act, modifying the former system of merit rating and conferring on the Board authority to reduce the amount of any assessment payable by an individual industry where proper precautions had been taken for the prevention of accidents. He said this far-reaching section had been substituted for the former system on the recommendation of manufacturers. The amendments to the Act authorized the Board to penalize a firm for unlawful employment of a minor, and added to the list of compensable industrial diseases; bursitis, resulting from any process involving continuous rubbing, pressure or vibration of the parts affected; cancer, arising from the manufacture of pitch and tar; dermatitis, from any process involving the use or direct contact with acids and alkalies or acids and oils capable of causing dermatitis, and infected blisters. Mr. Sinclair commented on the energy and enthusiasm of the Accident Prevention Associations operating under the authority of the Workmen's Compensation Act and congratulated the newly-elected officers.

Mr. C. S. Ching, of the United States Rubber Company, New York, spoke on "The New Attitude on Accident Prevention." He said one of the best indication of management's attitude towards safety was the amount of time and thought put into the problem; modern managers had become convinced that a lowered accident rate and efficient operation ran hand in hand, and that accidents are the result of management inefficiency. Mr. Ching appealed for the removal of all the material causes of accidents, and for the acceptance by employers of responsibility for impressing safe practices on every employee so that the safety idea would become a habit, and an accident be considered a disgrace.

The safety exhibit occupied the entire floor in the hotel and was a fine display of practical safety devices and first aid material. Tentative arrangements have been made for the holding of the next Convention at the Royal York Hotel, Toronto, April 27 and 28, 1933.

The Nova Scotia Legislature has adopted an Act, introduced by the Premier of the Province, to provide for a reduction of 10 per cent, during the remainder of the current fiscal year, in the amount of the sessional indemnity paid to the members of the Legislature. The amount of the indemnity is \$1,000 for each session.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Workers' Health in Canada in 1931

The *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, stated in its March issue as follows:—"The health record of 1931, among Canadian wage-earners and their dependents, was even more remarkable than that registered among the Industrial population of the United States. In the latter country, 1931 was recognized as a remarkable health year because the death rate, in spite of general unemployment and business depression, ran less than two per cent above the previous minimum. But with equally unfavourable economic conditions prevailing among approximately 1,200,000 Canadian wage-earners and their dependents, who are insured in the Industrial Department of the Metropolitan Life Insurance Company, their 1931 death rate was actually more than seven per cent below the previous minimum. New minimal death rates were registered in Canada in 1931 for measles, scarlet fever, diphtheria, pneumonia, tuberculosis and diarrhoeal complaints. Comparing the 1931 death rates for these diseases with those shown for 1925, we observe drops of 53 per cent for measles, 35 per cent for scarlet fever, 43 per cent for diphtheria, 16 per cent for pneumonia, 21 per cent for tuberculosis, and 37 per cent for diarrhoeal diseases. Perhaps the most gratifying item in the accompanying table is the 1931 death rate of 82.1 per 100,000 for tuberculosis. This marks a drop of nearly 16 per cent in a single year. Prior to 1931, the tuberculosis death rate among insured Canadians had been showing only a slow decline—by no means keeping pace with the drop observed in the United States.

### Safety Work in Woodworking Industries in Ontario

The annual meeting of the Woodworkers' Accident Prevention Association was held recently in Toronto. Among the topics discussed were the safeguarding of machinery, adequate first aid and interesting employees in safety work. Particularly gratifying to the members of this division was the good showing made by several of the groups in the matter of accident reduction with consequent reduction in compensation rates. It was pointed out that rates of assessments as fixed by the Workmen's Compensation Board are determined entirely on the experience of each Class. In 1931 before rate adjustments were made, Class 3 had a credit on the year's operations of more than \$34,000 but there was a debit of over \$10,000 carried forward from

1930. The net result of this was that most of the groups of Class 3 were fortunate in securing rate reductions; for example, the furniture rate was down from 90 cents to 60 cents and fixtures down from \$1 to 90 cents per \$100 of payroll. On the other hand, the piano and organ group of the Class had a bad experience and the rate went up from 75 cents to 90 cents. Class 4 had a credit on the year's operations of more than \$49,000 before rate adjustments. Most of this figure was in the good experience of the planing mill group and that group received the very satisfactory reduction from \$1.60 per \$100 of payroll to \$1.25, the lowest figure in many years and worth striving to hold.

### Construction Accidents in Quebec

Figures presented to the Province of Quebec Safety League's Construction Division at the bi-monthly meeting, held at Montreal on April 6, showed that accidents in this branch of industry are on the increase. Statistics for the past year were presented and showed that 20 firms were reporting their accidents and that there were 2,670 accidents during the year out of a man-hour total of 6,763,873. Of these accidents 927 were lost-time accidents, an increase of 269 over 1930. Members expressed the opinion that if the rate of increase continues it will not be long before the premiums under the new Workmen's Compensation Act will increase for all members of the construction classes.

### First Aid Rooms in Small Plants

The Metropolitan Life Insurance Company recently published, under this title, the first of a new Industrial Health Series of bulletins. "With a moderate number of employees and no excessively dangerous processes," it is stated, "a comparatively simple outlay is usually adequate to take care of first aid needs. These depend, however, to a large extent on the accident experience and the availability of medical service either in the plant or near at hand and on call. As a general rule, if the accident rate, even for minor accidents, is high, and the plant maintains no doctor, nurse, or dispensary, it will be found that a considerable saving in the cost of accidents can be demonstrated by installing a first aid station in charge of a well trained nurse with ample, though simple, equipment, and a good system of record keeping. The advantages of such an installation lie in the accomplishment of the following:—(1) Reduction of time lost in getting proper treatment

for injured and consequent reduction in number of serious results and prolonged disability cases following minor accidents; (2) Reduction in number of wound infections which are an important cause of lost time and permanent impairment to the injured individual; (3) Consequent reduction of compensation payments under Workmen's Compensation Insurance Laws; (4) Increased confidence of employees in first aid facilities of plant and hence less inclination to let injuries go without immediate attention; (5) Valuable opportunity for contact between employees and nurse, promoting better knowledge of cause of accidents and offering a means of introducing educational and preventive measures.

"If a trained nurse is not to be in charge of first aid work, the proposed attendant for the first aid room should be well trained in

the principles of first aid by a competent authority, such as the Red Cross or an interested physician, before taking up the duties involved. Such training should include thorough knowledge of the prone pressure methods of resuscitation.

"The first aid kit or cabinet should be of the simplest type and contain: (a) tincture of iodine and applicators or iodine in individual ampules; (b) bandages and sterile dressing; (c) a tourniquet; (d) aromatic spirits of ammonia; (e) adhesive tape and safety pins may be added.

"Other bulletins issued in the Industrial Health Series are as follows: (2) Physical Examinations in Industry; (3) Industrial Dental Services; (4) Functions of an Industrial Eye Clinic."

## EIGHT HOUR DAY AND MINIMUM WAGE SCHEDULES TO GOVERN QUEBEC PROVINCIAL PUBLIC WORKS

ANNOUNCEMENT was made on April 1 by the Honourable C. J. Arcand, Minister of Labour of the Province of Quebec, that the

Provincial Government had decided to apply a working day of eight hours on all building works undertaken by the Provincial Govern-

District No. A-1 comprises the following cities: Quebec, Levis—within a radius of five miles of their limits.

District No. A-3 comprises the following cities: Three Rivers, Cap-de-la-Madeleine and Shawinigan.

District No. A-5 comprises the following cities: Chicoutimi, Jonquières and Kenogami.

District No. B-1 comprises the following counties: Montmorency, Quebec, Portneuf, Champlain, Lavolette, St. Maurice, Maskinongie, Abitibi, Montmagny, Bellechasse, Levis, Dorchester, Beauce, Lotbinière, Frontenac, Wolfe, Arthabaska, Nicolet, Mégantic.

District No. B-3 comprises the following counties: Charlevoix-Saguenay, Lac St. Jean, Roberval, Chicoutimi, L'Islet, Kamouraska, Rivière-du-Loup, Temiscouata, Rimouski, Matapédia, Bonaventure, Matane, Gaspé North and South and Îles-de-la-Madeleine.

## Frontier College Charter Amendment

An Act to amend the Act of Incorporation of the Frontier College, introduced in the House of Commons by the Secretary of State on April 21, repeals the section of the Act which conferred upon the college the power to confer degrees in arts. The repeal was applied for by the College in pursuance of an agreement, dated December 18, 1931, with the Minister of Education of Ontario, which required that such application should be made forthwith.

Reference has been made in the LABOUR GAZETTE from time to time to the work of the Frontier College (November, 1929, page 1194 etc). Its objects are (a) to promote education among Canadian working men and women

and Canadian immigrants; (b) to promote higher educational training and instruction for teachers and social workers among Canadian working men and women and Canadian immigrants. The college may conduct classes of instruction and when necessary may construct buildings for the accommodation of the same in such parts of Canada as may be deemed expedient by the Board of Governors, as for instance in, or in the vicinity of factories, industrial plants, mining camps, lumber camps, railway camps, extra gangs and all communities of workers engaged in construction, industrial, agrarian and other labouring pursuits.

## LABOUR LEGISLATION IN ONTARIO AND SASKATCHEWAN IN 1932

### Province of Ontario

A NUMBER of laws of labour interest were enacted during the recent session of the Ontario Legislature, which began on February 10 and ended on March 29, 1932. These included new laws dealing with investigation of industrial disputes, and with unemployment relief; revision of the Acts governing factories, shops and office buildings, stationary engineers, and the Railway and Municipal Board; and amendments to statutes dealing with the Department of Labour, apprenticeship, minimum wages for women, workmen's compensation, steam boilers, railways, mechanics' liens, old age pensions, and licensing of electricians.

#### Industrial Disputes Investigation Act

The Industrial Disputes Investigation Act, 1932, which will come into force on proclamation, provides for making the Dominion Industrial Disputes Investigation Act applicable to disputes within provincial jurisdiction. The Lieutenant-Governor in Council is empowered to adopt by proclamation any future amendments to the Dominion Act. Provision is made that nothing in the Ontario Act shall apply to or affect any Commission whose members are appointed by the Crown. The Trade Disputes Act, which was passed in 1894, is repealed by the new statute.

#### Unemployment Relief

An Act Respecting Unemployment Relief validates an agreement between the Government of Canada and the Government of the Province pursuant to the Unemployment and Farm Relief Act, 1931, and confirms an Order in Council containing Regulations for the administration of the Unemployment Relief Fund. The Agreement and the Order in Council appear respectively as Schedule A and Schedule B to the Act. The Act further confirms agreements between the Province and the municipalities and provides that municipalities, parties to such agreements, may, without the assent of the electors, issue debentures to defray the cost of work undertaken. The Province's share of the cost is to be paid from the Consolidated Revenue Fund. The Agreement (Schedule A) provides for an eight-hour day on all works and undertakings, except where a modification of this requirement is agreed to by the Federal Minister of Labour. Provision is also made for the payment of fair and reasonable wages, for the use of Canadian materials and the employment of residents of Canada and, wherever practicable, of the locality where work is done.

#### Factory Act

The Factory, Shop and Office Building Act was re-enacted with a number of changes. The schedule containing a list of the various kinds of factories was omitted owing to the difficulty of keeping it up to date and the definition of "factory" was amended accordingly. Certain sections of the Act were made applicable to bakeshops and restaurants. These include provisions requiring the submission to an inspector of the plans of a building over two storeys in height or of any alteration thereto, and the provision of conveniences for employees, safety measures in connection with elevators and hoists, and the giving of notice of fires and accidents; forbidding the employment of children under 14 years of age and of children under 16 except on a certificate under the Adolescent School Attendance Act, the contravention of regulations of the Hydro-Electric Power Commission, or the keeping of premises so as to endanger health and safety. Provisions made applicable to restaurants include those dealing with inspection of premises, posting of notices, hours of labour, heating, lighting and ventilating of premises, sanitary regulations, and fire escapes. The majority of these already applied to bakeshops.

The definition of "shop" was widened to include premises where services are offered for sale, bringing such places as bowling alleys, shoe-shine parlours, etc., within the scope of the Act. In order to give better control of child labour in such places as lumber yards and yards about shingle mills, the clause enumerating places which are not part of a factory for the purposes of the sections dealing with evidence of employment, is amended by omitting "yards" and "places open to public view."

Under a new section the inspector may grant a permit authorizing the operation of a factory by double shifts. In such cases the hours of labour may not exceed eight hours for each shift nor sixteen hours for both shifts, and the time of the double shift must fall between the hours of 6 a.m. and 11 p.m. Youths, young girls and women must be allowed at least one hour in each shift for a meal. Time for the noon-day meal must be given between 10 a.m. and 12 noon, and for the evening meal between 6 p.m. and 8 p.m. The section permitting youths, young girls and women to be employed in shops between 7 a.m. and 10 p.m. on Saturdays, the day before a statutory holiday and from December 14 to 24, is amended

to limit the hours of employment to ten per day and sixty per week.

The employer in a factory, shop, bakeshop, restaurant, or office building must keep the premises properly heated. The required temperature in a factory, shop or restaurant is 68 degrees Fahr., unless a lower temperature is permitted by the inspector. The minimum temperature for a factory or shop was formerly fixed at 60 degrees Fahr.

The section providing for inspection of homes where garments or articles of clothing are being manufactured under contract, was enlarged to make similar provision for the manufacture of any household article.

A new section authorizes the Lieutenant-Governor in Council to make regulations for the protection of persons engaged in any industrial process involving the use of benzol or any other poison. The section relating to boiler insurance and inspection was amended to ensure that the inspection of uninsured boilers and pressure vessels shall be carried out by qualified engineers. A clause was added forbidding the use of outside fire escapes above the fifth floor in a factory, shop or office building.

Penalties for breaches of the Act are generally on a lower scale than formerly.

### **Operating Engineers**

The Operating Engineers Act repeals the Stationary and Hoisting Engineers Act and embodies a revision of the law which brings it into conformity with modern practice. The Act does not apply to internal combustion engines nor electric motor-drawn hoists of 25 h.p. or less. Plants with a combined h.p. of 35 are also exempt in certain cases. Other exceptions are a steam boiler or boilers with safety valve set to relieve the steam pressure at 15 pounds or less, provided the aggregate h.p. of such boiler or boilers does not exceed 200 h.p.; locomotives used in railroads, steamboats, tugs, and plants on vessels floating on navigable waters not adjacent to the shore; hoists at mines, and boilers and engines used for agricultural purposes. Qualifications required of members of the Board of Examiners are omitted from the Act and provision is made to have them prescribed by the regulations. A new clause requires owners of internal combustion engines to supply the Board upon request with information regarding the diameter and number of cylinders. The penalty for interfering with members of the Board or inspectors ranges from \$10 to \$100, that for impersonation from \$50 to \$200, and for operating without a certificate from \$25 to \$50. Factory inspectors and government officials engaged on road construction are charged with the duty of assisting in the enforcement of the Act and reporting violations.

### **Ontario Municipal Board**

The Ontario Municipal Board Act is a consolidation of several statutes dealing with municipal affairs, together with some new provisions. Included in the consolidation is the Ontario Railway and Municipal Board Act and the Board appointed under that Act is continued under the name of the Ontario Municipal Board. Sections of the old Statute provided that a dispute between a railway (including a street railway) or public utility company or corporation and its employees might be submitted to the Board for settlement, and authorized the Board to mediate in case of a strike or lockout of the employees of such companies or corporations. These sections are incorporated without change in the new Act.

### **Department of Labour**

The Department of Labour Act was the subject of several amendments. The clause outlining the functions of the Government Employment Offices was revised to conform with present practice, the words "for obtaining suitable employment for working men" being replaced by "for obtaining suitable employment for persons both male and female, in any of the trades, occupations, or professions and for procuring workers for employment in any of the trades, occupations or professions." A new section provides that when an inspector appointed under the Act, or any of the Acts or regulations administered by the Department of Labour, is of the opinion that any work or installation to which such Act or regulations apply is being carried on or has been installed in such a manner as to be dangerous to life or property, he may, by written order, to the employer, contractor or person responsible, order the immediate cessation of work or operation of the plant or any portion thereof which he considers unsafe. A penalty is provided for non-compliance with such order.

### **Apprenticeship Act**

The Apprenticeship Act was the subject of a number of amendments. The definition of "employer" was again amended and now includes any person, firm, corporation, or public authority employing mechanics, helpers, labourers, apprentices or other employees in connection with any of the designated trades or work incidental to those trades. A petition to have a trade included among the designated trades must be signed by twenty-five employers in the trade, or by not less than twenty per cent of such employers, where the total number in the Province does not exceed one hundred and twenty-five. A section providing for a Provincial Apprenticeship Board of three members replaces that which established an Apprentice-

ship Committee consisting of an equal number of employers and employees. Members of the Board serve for one year, but are eligible for reappointment. They receive no remuneration but an allowance for expenses, etc., may be granted. The appointment of a Chief Inspector of Apprenticeship is also authorized. Regulations will be made by the Board, with the approval of the Lieutenant-Governor in Council, instead of by the Lieutenant-Governor in Council as formerly. A new section authorizes the Board to hold conferences and make inquiries to determine the opinions and wishes of employers and employees in the designated trades regarding suggested changes in the Act and regulations. No such change may be made affecting any designated trade without giving at least one month's written notice to representative organizations, or, where such do not exist, to at least ten representative individuals in various parts of the Province, and providing opportunity for a full discussion of the proposed changes. All suggestions and recommendations in connection with amendments to the regulations are to be submitted in writing to the Board, and, where such request comes from ten or more employers or employees, the Board must provide opportunity for representations of such petitioners to meet the Board within one month after the submission of the recommendations. Clauses transferred to the Act from existing regulations provide a penalty for default in payment of assessments, and collection of assessments by court order. These clauses are retroactive to August 20, 1930.

### **Women's Minimum Wages**

The Minimum Wage Act was amended by the addition of subsections requiring employers to keep records setting forth the names, addresses, rates of wages, hours of labour, actual earnings, and actual time spent in work, of all female employees, also the ages of those who are under 18 years. A penalty is provided for falsifying or failing to keep such records. The section dealing with posting of Minimum Wage Orders was amended to make it clear that this duty is imposed upon the employer. The definition of "wages" was amended to include any compensation for labour or services, thus covering remuneration other than money payments, such as board and lodging. The penalty for contravening orders regarding wages or hours, which formerly ranged from \$50 to \$500, is now from \$20 to \$200.

### **Workmen's Compensation**

The Workmen's Compensation Act was the subject of a number of amendments, some of which carry out recommendations made by Mr. Justice Middleton in his recent report on

the working of the Act (LABOUR GAZETTE, April, 1932, page 407). Dental treatment made necessary by the accident is now included in medical aid. The section permitting the Board to adopt a system of merit rating was replaced by new provisions which authorize the Board to reduce the amount of the contribution to the accident fund from an employer if the works, machinery, etc. in his industry conform to modern standards, so as to reduce the hazard of accidents to a minimum, and the Board is satisfied that all proper precautions are being taken. The Board may adopt a merit system in regard to any particular industry, classifying the employer according to the extent to which the precautions against accidents are modern, adequate and efficient. A new section provides that where a minor is unlawfully employed and a claim is made for injuries to such minor, the unlawful employment shall not prejudice or affect the right of the claimant, but the Board may exclude the industry from the class in which it is included, in which case the employer shall be individually liable for compensation to the minor or his dependants.

The clause under which an employer who fails to make returns or pay assessments is liable for the capitalized value of compensation payable in respect of an accident to any of his employees during the period of default, was amended to make him liable for the capitalized values of medical aid also. An employer who defaults in reporting an accident or claim is liable for the payment of medical aid as well as compensation. The following were added to the schedule of industrial diseases: infected blisters, bursitis, dermatitis, and cancer arising from the manufacture of pitch and tar.

### **Steam Boilers**

An amendment to the Steam Boiler Act fixes a penalty of from \$50 to \$300 for any contravention of the Act or regulations which endangers the safety of persons, or for failure or refusal to comply with any order, direction or recommendation given under the Act or the regulations dealing with the sale, manufacture, installation or repair of steam boilers. A penalty of from \$10 to \$50 is provided for offences for which no other penalty is imposed.

### **Railways**

The Railway Act was amended by broadening the definition of "street railway" to include busses and other vehicular means of transportation operated as part of, or in connection with, a street railway.

### **Mechanics' Liens**

The Mechanics' Lien Act was the subject of a number of amendments. It is made clear that the extent of priority on a prior

mortgage is limited to the extent of the advances that have actually been made thereon at the time the first lien arose. A mortgage or charge existing in fact for which valuable consideration has been given or for all or for part of the purchase price of land before any lien arises is deemed to be a prior mortgage. Future advances made upon a prior mortgage also have priority, where the intention to make such advances and the amount thereof are clearly stated in the mortgage, unless there has been written notice or registration as provided by the Act. A mortgage given to a person entitled to a lien, as against other lien holders, is made fraudulent and void. An application may be made by any interested party to the judge or officer having jurisdiction for an order vacating a certificate of action which has been registered for two years or more. A bond or other security may be deposited in court to take the place of money directed to be paid in. The officer trying the action is given authority to set aside a fraudulent conveyance. Finally, the court is given power to appoint a receiver of rents and profits, and also to direct a sale, and appoint a trustee.

#### **Old Age Pensions**

By an amendment to the Old Age Pensions Act, an agreement between the Government of

Canada and the Government of the Province regarding old age pensions may provide for the payment by the Dominion of one-half or more of the net amount paid out for pensions. The Dominion Act as amended in 1931 provides for the payment to the provinces of 75 per cent of the cost of pensions. The percentage collectible by the Province from the municipalities was reduced, by the amendment to the Ontario Act, from twenty per cent to ten per cent of the pension. The section dealing with applications for pension was altered and now provides that an application is to be made in the first instance to the local authority which shall make its written recommendation to the Commission with whom the decision rests. Formerly the decision in each case was made by the local authority, subject to an appeal to the Commission.

#### **Licensing of Electricians**

The Power Commission Act was amended to provide for the licensing of dealers in electrical appliances and also electrical contractors and journeymen electricians in any municipality where a by-law is now in force for licensing electrical workers under The Municipal Act. Provision is also made for the bonding of electrical dealers and electricians in such municipalities.

### **Province of Saskatchewan**

The Saskatchewan Legislature was in session from February 4 to April 13, 1932, and enacted a number of laws of interest to labour. These dealt with unemployment relief, coal mines, weekly rest day, income tax, licensing of chauffeurs, liability of directors of companies for wages of employees, etc.

#### **Unemployment and Farm Relief**

The Relief Act, 1932, ratifies and confirms an agreement between the Government of Canada and the Government of the Province pursuant to the Unemployment and Farm Relief Act 1931, passed by the Government of Canada. The Lieutenant-Governor in Council is authorized to do all things necessary for carrying the agreement into effect, including the making of agreements with municipalities. Prior agreements are ratified. The necessary moneys may be raised by way of loan under the Loan Act, 1932. Pending receipt of the contributory shares payable by the Dominion and the Province under the agreement, municipalities are empowered to pass by-laws authorizing the raising of funds by way of loan and assigning such contributory shares as security. All such by-laws previously passed are validated.

The agreement between the Dominion and Provincial Governments which appears as Schedule A to the Act provides for the payment by the Dominion to the Province of fifty per cent of the amount expended by the latter on public works and undertakings to provide work for the unemployed or on provincial highways or on sections of the Trans-Canada highway. Provision is also made for the payment by the Dominion to the Province for remittance to any municipality of such proportion of the cost of municipal public works and of direct relief as may be agreed upon. The contribution towards public works is not to exceed fifty per cent, unless owing to the financial condition of the municipality a larger contribution by the Dominion is authorized by the Governor-General in Council. The Dominion further undertakes to pay fifty per cent of the expenditure made by the Province for direct relief in territory having no municipal organization and where suitable work cannot be provided. Direct relief is defined as "necessary food, clothing, fuel and shelter or the equivalent thereof." The agreement further provides for an eight-hour day, unless a modification of this requirement is agreed to by the Minister of Labour, and for fair

wages, the use of Canadian goods, if available, and the employment of residents of Canada and, as far as possible, of the locality in which the work is performed.

### Saskatchewan Relief Commission

The Saskatchewan Relief Commission Act ratifies a Proclamation of the Lieutenant-Governor dated August 5, 1931, appointing the five persons named therein as Commissioners for the relief of distress in Saskatchewan, with authority to use, for the purpose of relieving distress and providing employment, the moneys advanced to them by the Government of the Province from funds furnished for the purpose by the Government of Canada. Prior Acts of the Commissioners are confirmed. The Commission is empowered to do all things necessary for the carrying out of its duties, to provide such services and to purchase such quantities of seed grain and of coal, wood, fodder, feed, gasoline, kerosene, motor oil, formaldehyde, gopher poison, binder twine, repairs to implements and parts, clothing, flour and other staple commodities, to be supplied on such terms and conditions as it thinks fit, to persons needing such assistance. Applications for supplies are to be in writing in form approved by the Commission. Any persons receiving seed grain under the provisions of the Act must give a written agreement for a lien in favour of the Commission on all crops grown during the year in which the lien is made and the succeeding year on the land described therein. Penalties are provided for sale of grain or of land, implements, etc., while the note remains unpaid, and for the sale, barter or exchange of any commodity supplied by the Commission. Provision is also made for a lien on all crops grown in 1932 and 1933 by persons to whom any of the commodities named in the Act are supplied.

### Mines Act

The Mines Act was the subject of a number of amendments which will come into force on November 1, 1932, and some of which carry out recommendations made by the Commissioner, Judge Wylie, appointed to investigate mine conditions at Estevan and Bienfait following a dispute in 1931 (LABOUR GAZETTE, March, 1932, page 262). The title of the Act is changed to The Coal Mines Safety and Welfare Act, and the definition of "mine" amended to include "any parcel or tract of land from which coal is being mined, or which is being prospected for coal, or upon which development work preparatory to mining coal is being carried on, and includes all open cuts, slopes, levels, shafts, works, machinery, tramways, railway sidings, both below and above

ground, in or adjacent to a mine." The underground workings of a mine in which less than six persons are employed must be under the daily supervision of a miner holding a miner's certificate under the Act. When more than six persons are employed underground, every working face must, while mineral is being cut, removed, sheared, broken, or loosened from the solid, be in charge of a person holding a miner's certificate or a certificate of higher grade obtained under the Act. The clause providing that no mining contractor or person employed by such contractor shall act as manager, was repealed. Provision is made for the issuing of certificates of competency as manager, pit boss, or miner. Applicants for managers' and pit boss's certificates must have had five years and three years, respectively, of practical experience underground. Applicants for manager's certificates must have had four months of such experience. Candidates successfully passing examinations as mine manager or pit boss may receive certificates from the Minister on recommendation of the inspector. The fees remain at \$15 and \$5 respectively. An applicant for a miner's certificate must make a written application to the inspector, stating his experience and qualifications. The fee for a certificate is \$2. The inspector may, subject to examination at a later date, issued a miner's certificate to a person who has the required qualifications at the date of coming into force of the Act (November 1, 1932).

All shafts or outlets must be kept in such condition and state of repair as to provide a safe means of entering or leaving a mine. The owner, agent or manager must, on or before the fifteenth day of each month, make a return showing the tonnage of coal mined, the number of employees, and such other information as the Minister may direct. Where loss of life or serious personal injury is caused by an explosion or other accident, the owner, agent, or manager must report forthwith to an inspector. The clause forbidding an inspector to make a copy of any part of the plan of a mine was repealed and provision made that the owner, agent or manager of a mine shall furnish an accurate and up-to-date copy of the plan at the request of the Minister, but such plan may not be exhibited nor information therein be imparted to any person without the written consent of the owner, agent, or manager. A plan showing the ways of ingress and egress to and from the various outlets and travelling roads leading thereto must be posted in a conspicuous place at the mine.

A check-weigher or a representative committee of miners from a mine where wages are based on the amount of mineral recov-

ered, may at any time apply to the Minister for an inspection as to the system of checking weights or the accuracy of the scales, and the Minister may, if he deems it necessary, direct an investigation to be made. The section dealing with the appointment of a checker at a mine where wages are regulated otherwise than by weight of mineral recovered, was amended to provide that employees in such a mine might appoint "one of their number (herein called a checker) who shall be a practical working miner." This clause formerly provided for the appointment "in their behalf of one or more practical working miners."

A new section provides that a workman may not be employed above ground, or at his working place below ground, for more than eight hours in any twenty-four hours except by mutual consent of employer and employee. The provision does not apply to persons employed in the office, boarding house or bunk house. Exception is made in the case of underground workers, at the weekly changes of shift, where two or more shifts are worked, and also where life or property are in danger through accident, and where a pumpman, engineer, fireman, or other person in charge of constantly running machinery, is underground for the purpose of dealing with an emergency which, if neglected, would necessitate the closing of the mine. Working hours may be prolonged by half an hour per day when an employee is engaged in work which must be carried on continuously, or on technical work, so far as such work is necessary in preparing for or terminating the working of the mine. Such additional period must not be devoted to the production or transport of coal. The Minister may, by Order, in case of great emergency or grave economic disturbance due to the demand for coal exceeding the supply, suspend the operation of the Act with respect to any class or classes of mines, in so far as it restricts the hours of work, to the extent and for the period named in the Order. The inspector must have access to the time book and other records at all reasonable hours.

Sections dealing with wages were also added. An employee at a mine may, by written order, request the owner, agent or manager to apply the whole or any part of his wages towards the payment of hospital dues, medical service or sickness fund. Such order is only effective for the amounts specified therein, and the amounts so specified are to be used only for the purposes authorized. Proper accounts must be kept showing the sums retained and their disposal, and must be open to inspection at all times. The owner, agent or manager must also furnish a bond satisfactory to the Minister, conditioned for the proper accounting for the sums retained.

Wages must be paid twice a month at intervals as nearly as possible of half a month. Special contracts with employees and other means of securing exemption from this provision are forbidden. Employees in receipt of \$2,000 per annum or more are exempt.

### One Day's Rest in Seven

An amendment to the One Day's Rest in Seven Act which comes into force on May 1, 1932, provides that no one may suffer or permit an employee to work in an industry without the weekly rest of at least twenty-four hours. Formerly the Act forbade only the requiring of employees to work without the rest-day.

### Companies Act

The Companies Act was amended as from July 1, 1932, to provide that no director shall be liable for an action for wages or workmen's compensation assessments unless the company has made an assignment, or a receiving order has been made against it, or it is in process of being wound up, or has been struck off the register; or unless the company has been sued therefor, or a certificate has been filed under the Workmen's Compensation (Accident Fund) Act within one year after the debt becomes due, and execution against the company is returned unsatisfied in whole or in part. A person who has ceased to be a director is not liable unless action is begun within a year of his so ceasing.

### Licensing of Chauffeurs

In the revision of the Vehicles Act, which will come into effect on July 1, 1932, the sections relating to chauffeurs were re-enacted with very few changes. The provision requiring an applicant for a chauffeur's licence to file a certificate of physical fitness was omitted, but such applicant is required to make a declaration as to whether or not he is suffering from any physical or mental disability or disease which would be likely to render him a source of danger to the public when driving a motor vehicle. If the applicant appears to be suffering from such disability the licence shall not be issued. Except in the case of such diseases and disabilities as may be prescribed by the Minister, however, the applicant may claim to be subjected to a test of his competency and ability to drive. If he passes such test and is not otherwise disqualified the licence may not be refused by reason only of the above provisions. A new section requires every person in charge of a motor vehicle directly or indirectly involved in an accident resulting in personal injuries or damage to property exceeding \$50 to report at once to the nearest police officer.

The Public Service Vehicle Act which replaces the Public Vehicles Act will come into force on July 1, 1932. The Act sets up a Public Utility Board with power to make regulations relating to a number of subjects, including drivers. Any person operating a public service vehicle must obtain a certificate from the Board, which is issued subject to the fulfilment of certain conditions, including satisfactory evidence that the applicant has complied with the provisions of the Workmen's Compensation (Accident Fund) Act. Every driver of a public service vehicle must be of good moral character and fully competent to operate the vehicles under his charge, and must hold a chauffeur's licence under the Vehicles Act. He must not drink intoxicating liquor when on duty, or use it to excess at any time. He is forbidden to smoke while on duty. The holder of a licence to operate a public service vehicle may not employ a driver or operator who is not in possession of a chauffeur's licence under the Vehicles Act. Every owner of such a vehicle who dismisses a driver or operator must report such dismissal to the Board forthwith, giving the reason therefor.

### Municipalities

The City Act and the Town Act were amended to provide that councils of cities and towns respectively may pass by-laws grant-

ing aid or relief to the poor and providing for the taking of security where deemed advisable from persons to whom such aid or relief is granted and prescribing the form of security. A further amendment to the Town Act authorizes town councils, of their own motion, to pass by-laws requiring that during the whole or any part of the year any class of shops shall be closed on each or any day of the week during any time between 6 p.m. and 5 a.m. of the following day or on any one day of the week after 12 noon or such later hour as may be deemed advisable. Upon petition signed by not less than three-fourths of the occupiers of shops of the class to which such petition relates the council must pass such a by-law within four weeks. The council may also, upon petition of not less than two-thirds of the occupiers of shops throughout the town pass a by-law requiring all shops to close on any one day of the week at 12 noon or such later hour as may be deemed advisable. These amendments are in effect from May 1, 1932.

### Old Age Pensions

On March 17 a resolution was passed as follows:—

"That the Legislature of Saskatchewan respectfully urge upon the Federal Government the introduction of an amendment to the Old Age Pensions Act making provision for the granting of pensions to needy blind persons at an earlier age than stipulated in the Old Age Pensions Act."

## LABOUR AND INDUSTRY IN SASKATCHEWAN

### Annual Report of the Department of Railways, Labour and Industries for 1930-31

THE annual report of the Department of Railways, Labour and Industries of Saskatchewan reviews its activities during the year ending April 30, 1931. These include the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers Protection Act, the Employment Agencies Act, the Mines Act, and the Minimum Wage Act. The Bureau is also charged with the duty of preparing statistics of employment wages and hours of labour, strikes and lockouts, labour organization, industrial relations, conditions of industrial employment and the natural resources of the province. The Railways Branch concerns itself with questions of adjustment of freight rates, locations of branch lines, retention of station agents, and other matters having to do with railway development of the province.

*Industrial Statistics.*—The Industrial Development Branch refers to the conditions imposed on the province as a result of a series

of poor crop years, but anticipates a recovery both in general industry and in farming. "It is extremely unfortunate that the province of Saskatchewan should experience a series of poor crop years coincident with one of the severest industrial and trade depressions in the history of the Dominion. Even with average crop conditions the rural population would have been able to tide over these distressing times, but two dry years in succession in which the drought was so severe as to leave the farmers in a large portion of Southern Saskatchewan without feed for their animals, or garden produce for their tables, has made it imperative that aid should be forthcoming from the Provincial and Federal Governments.

"Proof that an improvement in industrial conditions generally will not long be delayed lies in the fact that in spite of the depression the Canadian mining industry has been able to show a record output for the fourth year in succession, while many other small industries

in Saskatchewan, such as the power industry, the milling industry, the coal industry and the sodium sulphite industry, have all shown increased production.

"The farming industry itself, which is so hard hit, will eventually realize some good out of the depressing times it is now experiencing, for the lesson of diversification in agriculture will have been driven home as never before. The depression has resulted in the formation of a Buttermakers' Association to insure a grade and standard of butter suitable for the export market. Greater attention is being given to the raising of hogs suitable for the bacon market, the building up of the overseas market for western cattle, and the increase in the number of sheep. All these factors will help to build up a greater stability to the buying power of the West and consequently the country will be better able to withstand and to recover from future industrial reactions."

It is pointed out that in order of importance the flour milling industry occupied the first position among Saskatchewan industries, according to returns for 1929, the last year for which complete statistics were available. The dairy industry was in the second position, while the third place was held by the slaughtering and meat packing industry. The percentage of the value of production of the leading industries to the total of all industries was approximately 66 per cent. These leading industries were as follows:—Flour mills; Butter and Cheese; Slaughtering and meat packing; Central electric stations; Printing and publishing; Breweries; Bread and other bakery products; Planing mill products; Dyeing, Cleaning and laundry work; Sawmills. The number of employees in these industries in 1929 was 5,972, the total number of employees in all industries being 8,047.

The report gives an analysis of the situation in various industries during 1930-31. As regards building activity it is stated that in spite of partial crop failures in 1929 and 1930, construction awards in 1930 were over \$5,000,000 ahead of corresponding figures for 1928, and only \$7,000,000 below those of 1929.

The mineral production schedule for the province, as prepared by the Dominion Bureau of Statistics, indicates that the value of production for 1930 was \$2,298,725 as compared with \$2,253,506 in 1929. Coal production in 1930 was 2,000 short tons less than in 1929 and the value of the product was \$966,929.

The fishing industry in 1930 had a market value of \$232,994 as compared with \$572,871 in 1929.

The principal statistics for the lumber industry are for the years 1928 and 1929 and

these indicate that in 1929 there were 757 employed in lumbering and their wages and salaries amounted to \$250,917.

*Employment Service.*—The work of the Employment Service in the province is dealt with in regular articles appearing in the LABOUR GAZETTE. A summary of the operations of the nine offices in Saskatchewan indicates that during the year ended April 30, 1931, a total of 41,383 placements were effected. The average wage for farm work prevailing throughout the year was: winter work, \$10 to \$15 per month; spring work, \$25 to \$40 per month; harvest work \$1.50 to \$2.50 per day; fall work, after threshing to freeze-up, \$15 to \$20 per month.

*Immigration.*—The section dealing with immigration outlines the provisions under which 'teen-age British boys are placed on carefully selected farms. During the period under review, 34 boys arrived in Saskatchewan, and the reports of the departmental inspector on the boys' adaptability to farming conditions in this country "bear out the soundness of the scheme." Under the heading, "General British Immigration," it is indicated that 6,435 British settlers were reported as coming to the province in 1930 as compared with 11,336 in 1929.

*Unemployment Relief.*—This section details the various undertakings and services in accordance with the agreement entered into between the Dominion and the province under the terms of the Unemployment Relief Act, 1930. In addition to such provincial undertakings as work camps, public works, etc. in which the cost was shared between the province and the Dominion, relief was extended in other ways. These included the refunding of freight charges on all cordwood shipped into the dried out areas; flour and coal, and fodder and fuel oil advances; grants for mothers' allowances; maternity grants; and bonusing of lumber companies to the extent of 75 cents per day per man for every man employed through the employment service branch. Direct relief in urban municipalities from October 1, 1930, to April 30, 1931, amounted to \$269,402.59.

*Steam Boiler and Industrial Inspection.*—This division deals with reports of inspection of steam boilers, grain elevators, factories, freight and passenger elevators and coal mines for the year ending April 30, 1931. There were 1,362 boilers, and 1,929 pressure tanks and vessels inspected during the period under review. As regards inspection of coal mines, the report of the mines inspector showed that there were 112 mines in operation, employing an average of 588 miners and 171 labourers. During the year there were 101 non-fatal and two fatal accidents in and about coal mines.

*Labour Legislation.*—The report gives a summary of the labour legislation recommended by the Saskatchewan executive of the Trades and Labour Congress of Canada in an interview with the provincial government on December 15, 1930. There is also

presented a synopsis of the One Day's Rest in Seven Act which was passed in the 1930 session of the Legislature, and which was reviewed in the LABOUR GAZETTE, June, 1930, page 656.

## THE MINING INDUSTRY OF NOVA SCOTIA IN 1931

A review of the mining industry of Nova Scotia is contained in the annual report of the provincial Department of Public Works and Mines for the fiscal year ended September 30, 1931. The report includes statistical tables with information in respect to mines and the mining operations; records of boring done by the government drills; results of the mining examinations held during the year; and reports of deputy inspectors and others, together with other information relative to the industry. In a prefatory note the Minister emphasizes the need for larger markets for the industry and re-iterates an appeal for a national fuel policy: "It is my confident hope," he says, "that the people of Canada will soon awake to the necessity for a National Fuel Policy through which Canadian coal will be used more extensively by the Canadian people. Such a development will, I believe, mean very much in the way of advancement for the coal industry of this province."

The following extracts from the report summarize the principal facts in regard to the mining industry:

During the fiscal year under review there were 4,745,005 tons of coal produced from Nova Scotia mines. This is a decrease of 1,009,497 tons as compared with 1930.

The average number of men employed at the coal mines show the total to be about 13,055, as compared with 13,423 of the previous year. The total number of man-days worked was 2,568,048 as compared with 2,989,428 in the fiscal year of 1930 which is a decrease of 421,380 man-days.

Coal sales for the year were 4,315,429 tons of 2,240 lbs. as compared with the previous year's sales of 5,281,508 tons, a decrease of 966,079 tons. The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,404,026 tons of 2,240 lbs. as compared with the previous year of 1,844,480 tons, a decrease of 440,454 tons. Shipments to the United States were 36,341 tons during the fiscal year, as compared with 10,883 tons for the previous year. The shipments to the St. Lawrence market in the fiscal year were 1,835,524 tons of 2,240 lbs., as compared with 2,213,767 tons for the previous year, a decrease of 378,243 tons.

The quantity of coal supplied the Dominion Iron & Steel Company was 552,925 tons as against 1,004,845 tons in 1930 a decrease of 451,920 tons.

The total amount of coal used by the coke ovens in the province last year was 566,768 tons—556,976 tons by the Dominion Iron and Steel Company and 9,792 tons by the N.S. Light & Power Company while this year a total of 369,373 tons were used—357,726 tons by the Dominion Iron and Steel Company and 11,647 tons by the N.S. Light and Power Company.

The total quantity of coke manufactured in the province this year was 223,635 tons—216,197 tons by the Dominion Iron and Steel Co. and 7,488 tons by the N.S. Light and Power Co. Last year there was a total of 342,155 tons produced—335,753 tons by the Dominion Iron & Steel Co., and 5,467 tons by the N.S. Light and Power Co.

The quantity of tar manufactured from coal during the fiscal year was 3,815,686 imperial gallons, as against 5,491,723 gallons manufactured during the previous year.

The benzol gas, from coal manufactured for motor fuel, etc., during the year was 723,736 imperial gallons, as against 966,044 in the previous year, showing a decrease of 242,308 gallons.

During the year 1,597,051 silicate brick were manufactured. This is an increase of 48,495 as compared with the previous year.

The mining and shipment of crude and calcined gypsum reached 754,083 tons for the fiscal year. This is a decrease of 109,051 tons from the previous year.

The production of salt for the fiscal year was 25,951 tons, as against 25,703 tons for the previous year.

*Fatal Accidents.*—The report analyses the fatal accidents in Nova Scotia coal mines during 1931, and compares the figures for the province with those in the United States. During 1931 there were 28 fatal accidents in the coal mines of the province as compared with 30 in the previous year. Of the total of 28 fatalities in 1931, 21 were underground. Falls of roof or face accounted for 50 per cent of such fatalities, while mine cars and locomotives caused 25 per cent of the fatalities.

The fatal accident ratio per million tons of 2,240 pounds was 5.90 in 1931 as compared with 5.21 in 1930, while the ratio per 1,000 men employed was 2.15 as against 2.23 in the previous year. In 1929 the ratio of fatalities in Nova Scotia per 1,000,000 tons of

2,000 lbs. was 3.38 as compared with a ratio of 3.59 for the United States. On the basis of per one thousand 300-day workers, the ratio for Nova Scotia in 1929 was 1.91 while the United States ratio was 4.54.

## MINIMUM WAGES FOR WOMEN IN NOVA SCOTIA

### First Annual Report of Provincial Minimum Wage Board

THE first annual report of the Minimum Wage Board for Nova Scotia deals with the administration of the Act for the period ended September 30, 1931. Nova Scotia's minimum wage legislation was passed in 1920, but the Act only became effective by Order-in-Council in 1930. The regulations governing its administration were given in the LABOUR GAZETTE, July, 1930, page 736. In several issues last year the LABOUR GAZETTE published the various wage orders of the Board as they appeared as follows:—

Laundries and Dry Cleaning Establishments, Food Trades (Halifax), and Hotels (January, 1931, pages 34-35); Food Trades (exclusive of Halifax) (July, 1931, page 769); Telephone Operators, (August, 1931, page 884); Textile and Needle Trades (September, 1931, page 984); Factories (November, 1931, page 1192).

The report refers to the fact that at the National Industrial Conference held in Ottawa in September, 1919, (LABOUR GAZETTE, October, 1919, page 1178) a resolution was unanimously adopted urging provincial governments that had not adopted minimum wage laws to enact such legislation; and recommending uniformity in such measures and their application, due regard being given to local conditions. Since that time all the provinces with the exception of New Brunswick and Prince Edward Island have brought minimum wage acts into effect. The New Brunswick Legislature enacted legislation in 1930 (LABOUR GAZETTE, October, 1930, page 1153) but the Act has not been put into operation.

In its general outlines, the Board administering the Act has followed the Ontario program and expresses its appreciation of assistance from the Ontario Board. Enunciating the principle underlying minimum wage laws the Nova Scotia board quotes from the first report of the Ontario board as follows:— "A worker has the right to live from her work and to assert the value and dignity of human life within the industrial sphere. It does not fix wages, but sets levels below which wages may not fall."

The report points out that, paralleling to some extent the experience of Ontario, "the

act was brought into effect during a time of business depression, which has been of more intensity this past twelve months than the preceding, and although we cannot definitely state that wages would have been lower had the Act not been in force, we believe that this would undoubtedly have happened. On account of this depression the Board has not brought in as many orders as it otherwise would have, and has felt it better to allow women to be employed at a lower rate, than to be forced out of positions altogether in the curtailing of staffs, or the employing of inexperienced rather than experienced help."

Dealing with its procedure, the Board details its method in arriving at a cost of living budget to form the basis of establishing a living wage for experienced women workers. This budget was the subject of separate and joint conferences with employers and employees of laundries and dye works in Halifax, the first order to be issued having concerned this industry. The budget adopted allows \$312 per year for board and lodging, \$142 per year for clothing; \$109 per year for sundries (including laundry, doctor, dentist, car-fare, church and charity and recreation); and \$15 per year incidentals. This totals to \$578 per year or an average of approximately \$11 per week, which was then established as the minimum wage.

Conferences were also held by the Board with all employers of women labour at Sydney and New Glasgow, and the Budget at these conferences received the unanimous approval of both parties concerned. Similar conferences were held in Halifax with the restaurant proprietors and their workers. Members of the Board visited all the principal industries throughout the Province, and in all cases while not always agreeing with the budget as laid down, the employers were found willing to meet the wishes of the Board in every way possible, and to assist and establish the living wage for all women workers. The Board held forty one meetings, conducted twenty two conferences, three public meetings and had two hundred and seventy six interviews. It is stated that while the Board did always find

employers willing to conform to the schedule, they found it necessary so far to take little action, and only in one case, was a restaurant proprietor sued in the City of Halifax, where a conviction was obtained, but that case was appealed, and had not been heard when the report was published.

"Some complaint", the Board states, "has been heard from industries competing with those in the next Province, New Brunswick, where a minimum wage is not yet in force, and in the textile industries where they come into competition with the Eastern portion of the Province of Quebec where the wages are somewhat lower than Nova Scotia amounts. In time we hope there will be more uniformity among these portions of the Dominion. While different districts have different standards and conditions we believe it is possible to have a more uniform minimum. While the minimum wage for women is not universal the tendency is, even in districts where there is no Act, to treat women in a much fairer and better way than in days gone by, and with very few exceptions the women workers who have not been organized for the purpose, have benefited greatly by the protective laws of the Statute Books.

"The Board has been able during the short period of the Act's operation to recover for the women workers in back pay, the amount of \$336.04, in addition to promulgating orders applying to laundries, textile manufacturers, hotels, restaurants, tea rooms, confectioneries, bakeries and telephone operators. The Board has gathered wage sheets from many stores throughout the Province, and these invariably show, that there is no standardization of wages. This experience however, is the general one throughout the world where similar statistics have been gathered, and the opinion is universal, that women's wages are without standard.

"Like the Ontario Board, the Nova Scotia Board has felt that the success or failure of an Act of this nature depends upon how those who have to pay are approached, and with this end in view we have endeavoured first to confer with the employers before bringing in any orders.

"During the time the Act had been in force this Province like the rest of the world has been going through a period of depressed business conditions, and we have not felt it prudent to force the Act in certain places, fearing that the women, for the good of whom the Act was passed, would be worse off, as the employer might use this as an excuse for dispensing with help which he might otherwise have retained."

The fact of our next nearest Province not having any Act and Quebec not being entire-

ly covered has also lead this Board to make haste slowly in order to avoid a disruption of industry."

The chief statistics in the industries under the Act are summarized as follows:

*Laundries, Dye Works, etc.*—Firms reported, 16; Number of women workers, 200 (inexperienced under \$11—37; experienced \$11 and over—163); time workers, 188; piece workers, 12, total weekly wages paid, \$1,848.70; average weekly wage \$9.24; average weekly wage under 18 years, \$6.08; average weekly wage over 18 years, \$10.41; percentage of girls under 18 years, 15.5; over 18 years, 84.5; average hours per week, 50½.

*Confectionery, Baking and Allied Food Trades.*—Firms reported, 9; number of women workers, 537; (inexperienced workers under \$11.00—338; experienced workers at \$11.00 and over, 199); time workers, 283; piece workers, 253; part time workers, 1; total weekly wages paid, \$5,347.60; average weekly wage, \$9.95; average weekly wage under 18 years, \$8.00; average weekly wage over 18 years, \$10.24; percentage of young girls under 18 years, 12.6; percentage of girls over 18 years, 87.4; average hours per week, 42 hours.

*Hotels, Restaurants and Tea Rooms.*—Firms reported, 57; number of women workers, 577; (inexperienced workers under \$11.00, 504; experienced workers at \$11.00 and over, 73); time workers, 574; total weekly wages paid, \$4,315.59; average weekly wage, \$7.47; average weekly wage under 18 years, \$6.38; average weekly wage over 18 years, \$7.51; percentage of young girls under 18 years, 4.3; percentage of girls over 18 years, 95.7; average weekly hours, 76.

*Textiles, Needle and leather trades.*—Firms reported, 10; number of women workers, 527; (inexperienced workers under \$11.00, 463; experienced workers at \$11.00 and over, 64); piece workers, 154; part time workers, 373; total weekly wages paid, \$5,782.45; average weekly wage, \$10.98; average weekly wage, girls under 18 years, \$6.33; average weekly wage, girls over 18 years, \$11.39; percentage of young girls under 18 years, 8.4; percentage of girls over 18 years, 91.6; average hours per week, 50.

*Telephone Operators.*—Firms reported, 1; number of women workers, 472; (inexperienced workers under \$11.00 and over, 165); time workers, 472; total weekly wages paid, \$4,635.45; average weekly wage, \$9.82; average weekly wages over 18 years, \$9.82; percentage of girls over 18 years, 100; average hours per week, 48.

## WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1931

THE annual report of the Workmen's Compensation Board for the year ended December 31, 1931, gives a summary of its activities during 1931, as well as tabular statistics for the year 1930. In addition there is a general review of the operation of the Act since it became effective on January 1, 1917.

During the fifteen years from the beginning of 1917 to the end of 1931 accidents in the industries within the jurisdiction of the Act to the number of 108,931 were reported. Within that period there were 1,385 workmen fatally injured. The amount actually paid to workmen or their dependants and for medical aid during the fifteen years from the beginning of 1917 to the end of 1931 was \$10,089,338.85, and the amount required at the end of 1931 for the purpose of paying life and other pensions and compensation to disabled workmen and for medical aid, was \$6,934,975.50. The total compensation paid or payable to workmen and their dependants and for medical aid for the fifteen years amounts to \$17,024,314.35. That amount does not, however, represent the entire cost of the accidents for the fifteen year period, as the administration expense and cost of safety associations are not included. There were 746 widows to whom pensions for life or until remarriage were awarded; 1,739 children under sixteen years of age were awarded monthly pensions while under that age; dependent mothers and fathers to the number of 391 were awarded compensation, 33 members of the family other than widows, children and parents, but who were wholly or partly dependent upon the earnings of deceased workmen at the time of their respective deaths, received benefits, and life pensions were awarded to 3,807 workmen who were disabled, either wholly or partially, for life. Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the twelve years that have elapsed the cost of medical aid was \$945,624.75.

*Accidents in 1931.*—The total number of accidents reported to the Board in 1931 indicated a very marked decrease. In 1931 there were 6,775 accidents reported as compared with 9,518 in 1930—a decrease of 2,743.

The total cost of all accidents during 1931 under Part I of the Act was estimated as approximately \$1,160,400, exclusive of the administrative expense and the cost of safety associations.

The 6,775 accidents reported to the Board during 1931 are classified as follows:—

Fatal accidents, dependency established and compensation commenced. . . . .	55
Fatal accidents, burial expenses paid, no dependants. . . . .	12
Fatal accidents reported, pending adjustment. . . . .	4
Fatal accidents, claim non-compensable or disallowed. . . . .	4
Accidents causing permanent partial disability. . . . .	204
Accidents causing total disability for seven days or over. . . . .	4,290
Accidents where medical aid only has been paid. . . . .	1,635
Accidents pending adjustment, no payments. . . . .	255
Accidents not compensable (other than fatal). . . . .	316
	<hr/>
	6,775

*Financial Summary.*—In its report for 1930, the Board made reference to its decision to recalculate the pension reserves and the liabilities for outstanding claims on a  $4\frac{1}{2}$  instead of a  $3\frac{1}{2}$  per cent basis. "This work was completed during the year 1931" the report states, "and it was found that due to the recalculation the amount in excess in the pension reserve fund was \$415,639.84. This amount was credited to the classes in proportion to the amount which they had contributed to the pension reserve fund. This enabled the Board, where the experience warranted same, to make retroactive reductions in rates. Our annual report for the year 1930 estimated that the deficit at the close of that year would be \$95,532.70. Owing to adjustments in payrolls and the surplus which accrued from the recalculation of our pension reserve fund this deficit was changed to a surplus of \$367,425.47.

"For Industries under Part I of the Act, the total income for the year 1931, actual and estimated, amounted to \$1,057,572.58, and the estimated expenditure for the same period was \$1,257,452.15, showing a deficit for the year's operations of \$199,879.57. The surplus forward from prior years was \$367,425.47, leaving a surplus at December 31, 1931, of \$167,545.90; less \$10,000 for doubtful accounts, or a net surplus of \$157,545.90."

*Benefit of Act to Workmen and Dependents.*—During the year 4,290 workmen, injured and wholly disabled for seven days and upwards, were paid compensation. At the end of the year, the persons receiving compensation for 1931 and prior years in the form of a monthly pension were as follows: widows, 514; children under sixteen, 927; de-

pendent mothers, 72; dependent fathers, 30; other dependents, 17; workmen disabled for life (partially or wholly) 815.

*Income and Expenditure by Classes.*—The actual and estimated income and expenditure in respect to each industry under Part I of the Act according to the provisional statement of such to December 31, 1931, were as follows:—

Class	Income (actual and estimated)	Expenditures (actual and estimated)
	\$	\$
Mining.....	530,545 33	598,126 53
Lumbering and woodworking..	147,722 40	170,015 74
Iron and Steel.....	50,639 19	70,247 74
Manufacturing and Operating (not otherwise specified)....	62,910 81	93,182 02
Building and Construction.....	65,758 22	74,698 47
Public Utilities.....	67,676 32	74,183 36
Transportation.....	132,320 31	176,998 29
Total.....	1,057,572 58	1,257,452 15

The report also presents a tabular recapitulation of accidents during 1930, indicating the accidents compensated, by classes; the month of occurrence of the accidents compensated; the locality of accidents; the time loss, average wage and average age of classes; the nature of injuries by classes; the causes of accidents, etc.

## Workmen's Compensation in Alberta

Regulation No. 18, under the Workmen's Compensation Act (Accident Fund) of Alberta, recently published in the *Alberta Gazette*, provides as follows:

"Every form of employment connected with the production and subsequent handling of firewood, cordwood, mine-props, mine-timbers, telephone-poles, piles, and railway ties, whether executed by contract or otherwise, shall not be deemed as within scope of The Workmen's Compensation Act (Accident Fund) unless the said employment is in conjunction with an industry enumerated in the schedules to which such Act applies."

## MINIMUM WAGES FOR BOYS IN MANITOBA

### Regulations governing Manufacturing Industries in Winnipeg and Brandon

THE Minimum Wage Board of Manitoba, under last year's amendment to the Minimum Wage Act extending its scope so as to include boys under 18 years of age (*Labour Gazette*, May, 1931, page 503), recently issued Regulation 16, as follows:—

#### REGULATION 16

1. *Conditions of Labour.*—These conditions are identical with those laid down in Order No. 12 (*LABOUR GAZETTE*, December, 1931, page 1305.)

2. *Hours.*—(1) The hours of labour shall be not more than nine (9) hours in any day. These hours shall be arranged so that no boy shall work more than forty-eight (48) hours in a week. Each boy shall receive one-half day off each week. (2) *Overtime.*—Overtime may be worked only on permit from the Bureau of Labour (provided it does not interfere with any regular evening educational classes), not oftener than thirty (30) days in any year for any employee. No overtime shall exceed three (3) hours in any day nor six (6) hours in any week. There shall be extra pay at not less than the regular rate for all overtime worked, a record of which shall be kept in a manner convenient for examination by the inspectors. No overtime shall be worked by boys under seventeen (17) years of age. (3) *Lunch Hour.*—At least one hour shall be allowed for lunch. (4) *Delays.*—An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

(3) *Wages.*—(1) The Minimum Wage—No boy under eighteen (18) years of age shall be

paid wages at a rate less than \$8 per week for the first six (6) months of employment; nor at a rate less than \$9 per week for the second six (6) months of employment, nor at a rate of less than \$10 per week, after twelve (12) months of employment. (2) *Method of Payment.*—Wages shall be paid weekly and after each week's wages have been earned they shall be paid within three days. (3) *Statutory Holidays.*—No reduction shall be made from the minimum wage for statutory holidays. (4) *Uniforms.*—If special uniform is required it shall be furnished and laundered by the employer without cost to the employees.

4. *Permits of Exemption.*—The Board may issue a permit upon application therefor to any employer, granting modification of or exemption from these regulations. Such permits will be issued only in cases of exceptional or emergent conditions arising.

5. *Penalty.*—Any violation of these regulations is punishable by fine or imprisonment, or both. See "The Minimum Wage Act," Section 17.

6. *Posting of Regulations.*—Each employer shall keep a copy of these regulations posted in a conspicuous place.

This order becomes effective and of full force and effect from this date and all regulations and orders of the Minimum Wage Board appertaining to the above mentioned establishments made prior to the date hereof are hereby repealed.

## Minimum Wages in Saskatchewan, 1930-31

Included in the annual report of the Department of Railways, Labour and Industries of Saskatchewan is the report of the Minimum Wage Board, which reviews its activities in administering the Act during the year ended April 30, 1931.

During the year there were 54 special investigations as a result of which the following amounts were paid to female employees: arrears of wages, \$1,570.85; overtime, \$80; lieu of notice, \$4.50. There were eleven prosecutions under the Act, seven of which concerned hours of work; one over regulations; and three regarding wages. As a result of these court actions, fines totalling \$110 were imposed. Overtime permits issued during the year numbered 71, these being considered necessary chiefly during the Christmas season, periods of stock-taking, etc., and were granted as follows: mail order houses, 12; factories, 23; stores, 26.

An analysis of the statistics indicates that in a large number of cases employers pay in excess of the minimum wage and do not regard the minimum as the actual maximum. For instance, according to the report, the highest minimum wage set by the Board for experienced workers was \$15 per week in shops, stores and beauty parlours. Yet, out of a total of 1,541 employees in shops and stores 572 received \$16 and over, and of 112 operators in beauty parlours 42 received over the minimum wage. In laundries, factories and mail order houses, for which \$14 was the minimum wage, there were 753 employed, 178

of whom were paid \$15 or over. In hotels and restaurants a total of 2,339 women were employed, 500 of whom were paid \$16 and over.

The following paragraphs give the chief statistics in connection with the administration of the several Orders in 1930-31:

*Shops and Stores.*—Number of firms, 306; number of employees, 1,541 (inexperienced, 365, experienced, 1,176); employees on piece work and part time, 74.

*Laundries and Factories.*—Number of firms, 107; number of employees, 431 (inexperienced 79, experienced 352).

*Beauty Parlours and Barber Shops.*—Number of firms, 58; number of employees, 112 (inexperienced 7, experienced 105); number of apprentices paying premiums, 3.

*Hotels, Restaurants and Refreshment Rooms.*—Number of firms, 253; number of employees, 685 (inexperienced, 165, experienced, 520); employees on piece work or part time, 2. The minimum wage of experienced employees is \$13 per week for a six day week and \$14 for a seven day week. The Order also permits a deduction of \$5.25 for a full week's board of 21 meals, and of \$2.50 for lodging per week of seven days. A considerable proportion of the employees governed by this Order receive board and lodgings or both as part compensation.

*Mail Order Houses.*—Number of firms, 7; number of employees, 322 (inexperienced, 40, experienced, 282).

## Reduction of Women's Minimum Wages Rates in Saskatchewan

The Minimum Wage Board of Saskatchewan on March 30, 1932, issued Order No. 6, as follows:—

### ORDER No. 6

The Board orders that for a period of five months from the first day of June, 1932, the minimum rates of wages fixed by the Board for experienced workers in shops and stores, laundries and factories, mail order houses, hotels, restaurants and refreshment rooms, beauty parlours and barber shops, be reduced by ten per cent.

The Board orders further that for a period of five months from the first day of June, 1932, the minimum rate of wages fixed by the Board for adult learners with more than twelve months' experience in shops and stores, be reduced by five per cent.

The foregoing reductions shall not apply to any employee subject to a periodical or other layoff, whether by the hour, day, week or month, or who works less than the maximum number of hours per week, permitted by the regulations of the Board.

These regulations shall come into force on the first day of June, 1932.

## Resolutions of Manitoba and Alberta Legislatures

### Alberta

The Alberta Legislature, at its session on April 5, adopted the following resolutions (Resolutions on the subject of unemployment insurance and health insurance were noted in the last issue, page 411).

*Mothers' Allowances.*—"That this Legislature is of the opinion that the government should continue to use the money appropriated by this Legislature under the Mothers' Allowance Act to the best advantage, having in mind the necessity of causing as little hardship

as possible among the increasing number of applicants for allowance under the said Act."

*Coal-Mining.*—"Whereas coal-mining is the second largest industry in the Province of Alberta; and Whereas the said industry is in a perilous state, not merely by reason of world conditions, but also by reason of domestic conditions; and Whereas it is desirable to encourage industry as a diversification of the means of livelihood and as a means of providing a local market for the produce of the farms; therefore be it Resolved, That in the opinion of this Assembly the Government should so reorganize one of its existing Departments so that the major interest of the Minister thereof should be the encouragement of industry, particularly the mining industry."

### Manitoba

The Manitoba Legislature adopted the following resolutions in April:—

*Federal Unemployment Insurance.*—"Whereas the problem of unemployment has reached such proportions as to demand permanent and systematic methods of providing for those affected thereby, Therefore, be it resolved, That in the opinion of this House the Government should again urge upon the Dominion Government the necessity of inaugurating a system of State Unemployment Insurance. Be it Further Resolved, That the Government of Manitoba should press for the immediate

calling of a conference between the Dominion and Provincial Governments for the purpose of investigating the whole matter with a view to formulating such legislation."

*Pensions for the Blind.*—"Whereas the Legislature of Manitoba has year after year since 1926 memorialized the Federal Government to pass a pension scheme for needy blind persons either by amending the Old Age Pensions Act to include the blind at an earlier age and to pay pensions on a more liberal scale than to sighted persons, or by the passing of a Blind Persons Pension Act; and, Whereas, to date no effective results have accrued from such repeated memorializations; and, Whereas the need of the blind for pensions is increasingly urgent; Therefore be it Resolved, That this Legislature earnestly request the Government of Manitoba to immediately open active negotiations with the Federal Government, and to actively persist therein until such pension scheme has become a reality, and to this end, Be it Further Resolved, That should the Federal Government fail to pass such Pension Act for blind persons at the present session, this Legislature request the Provincial Government of Manitoba to press for the calling of a conference of Federal and Provincial Governments at the earliest possible moment after prorogation, for the purpose of discussing and evolving some scheme to bring pensions into existence."

### Family Allowances in France

A Family Allowances Act has been adopted in France, to form the fifth chapter of the Labour Code. It requires every employer in an industrial, commercial or agricultural occupation, or liberal profession, to become a member of a compensation fund or similar institution approved by the Minister of Labour. In exceptional cases an employer who has already established on behalf of his workers a family allowance service approved by the Minister of Labour may be exempt from this requirement. The application of the act to agricultural undertakings will be determined by public administrative regulations, issued on the initiative of the Minister of Labour and the Minister of Agriculture and after consultation with the Chambers of Agriculture.

The act provides for allowances for every child dependent on the worker or salaried employee up to the school-leaving age, or up to

the age of 16 if the child is continuing its studies or has entered apprenticeship. The number of daily allowances may be not less than the number of days' work performed. The allowances are payable in full in the event of temporary or permanent incapacity or in case of death resulting from an accident.

The minimum rate of the allowance for each child will be determined by an Order of the Minister of Labour in each department, either for all occupations together or for each occupational group. The rate may not be less than that granted by the compensation funds already approved at the time of the promulgation of the act, but may be raised or lowered at a later date. Allowances may not be ceded or attached, except for the payment of the specific items of debt covered by the Civil Code.

## TRADE UNIONISM IN CANADA

### Summary of the Twenty-first Annual Report on Labour Organization

THE Twenty-first Annual Report on Labour Organization in Canada, covering the calendar year 1931, points out that for the first time since 1924 membership of trade unions in the Dominion shows a decline, the net decrease being 11,905. It is stated that the loss in following would no doubt have been greater if it had not been that a number of organizations paid from surplus funds the *per capita* tax of out-of-work members, who were thus kept in good standing. The report, as usual, divides the labour organizations operating in Canada into six classes, as follows: (1) Local branches of international craft unions, having their headquarters in the United States; (2) the One Big Union, an international industrial body, with headquarters in Winnipeg; (3) local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with head office in Chicago; (4) Canadian central labour organizations; (5) Independent trade union units; and (6) National Catholic unions.

The international craft union group consists of the Canadian members of 82 organizations, two less than in 1930, with 1,884 branches in the Dominion (a loss of 62), and a combined membership of 188,219 (a decrease of 15,259). The One Big Union claims 46 local units in Canada (a gain of 1), with 24,260 members (an increase of 536). The Industrial Workers of the World reported 5 branches (a loss of 1), with 3,466 members (a decrease of 275). The group composed of 25 Canadian Central organizations (a decrease of 2) have between them 679 local branches (a gain of 6), with a combined membership of 57,349 (an increase of 181). There are 37 independent units (an increase of 6), with a combined membership of 12,099 (a gain of 2,761). The National Catholic group of unions consists of 121 syndicates (an increase of 13), the combined membership being reported at 25,151 (a gain of 151). These figures indicate that there was in Canada at the close of 1931 a total of 2,772 trade union branches (a decrease of 37), with a combined reported and estimated membership of 310,544, a loss as above stated of 11,905. Trade unionists represent about 3 per cent of the population according to the 1931 census; adding 105,152 members of associations not connected with the trade union movement, whose names appear in a section of the report, organized wage-earners in Canada at the close of 1931 represented slightly over 4 per cent of the population.

The accompanying chart, which is extracted from the report, shows the fluctuations in

trade union membership in the Dominion from 1911 to 1931, the period covered by these annual reports on labour organization. Another chart published in the report indicates that the 310,544 trade union members in Canada are divided by groups of industries as follows:

Railroad employees, 90,356 members, or 29.10 per cent of the total;

Building trades, 36,744, or 11.83 per cent;

Public employees, personal service and amusement trades, 33,530 members, or 10.80 per cent;

Mining and quarrying, 23,111, or 7.44 per cent;

Other transportation and navigation trades, 22,873, or 7.37 per cent;

Metal trades, 17,802, or 5.73 per cent;

Clothing, boot and shoe trades, 15,680, or 5.05 per cent;

Printing and paper making trades, 14,965, or 4.32 per cent;

All other trades and general labour, 55,483, or 17.87 per cent.

The report points out that the railroad employees group contains a number of metal trades workers who are not employed in railroad shop work and should be included in the metal trades group, but it was not possible to secure separate figures.

The number of branches and the reported and estimated membership of the various classes of labour organizations operating in Canada at the close of 1931, with the number of members of each group affiliated with the Trades and Labour Congress of Canada and the All-Canadian Congress of Labour, are indicated in the following statement:—

—	Branches	Membership	Members affiliated with Trades and Labour Congress of Canada	Members affiliated with All-Canadian Congress of Labour
International Craft Unions...	1,884	188,219	153,362	.....
One Big Union...	46	24,260	.....	.....
Industrial Workers of the World	5	3,466	.....	.....
Canadian Central Labour Organizations.....	606	48,509	3,330	25,221
Directly Chartered Local Unions	73	8,840	5,739	3,101
Independent Units.....	37	12,099	.....	.....
National Catholic Unions.....	121	25,151	.....	.....
Totals.....	2,772	310,544	162,431	28,322

## MEMBERS

*Organizations With Large Memberships.*—There are twelve international craft unions with 5,000 or more members in Canada, and between them have a membership of 120,124 comprised in 794 local branches. Two of the organizations which confine their operations to the Dominion have over 5,000 members, these being the Canadian Brotherhood of Railway Employees with 17,350 and the Trades and Labour Congress of Canada whose 42 directly affiliated unions embrace a membership of 5,739.

*Trade Union Branches by Provinces.*—The division by provinces of the 2,772 branch unions of all classes is as follows: Ontario, 1,046; Quebec, 501; Alberta, 277; British Columbia, 276; Saskatchewan, 212; Manitoba, 187; Nova Scotia, 137; New Brunswick, 124; Prince Edward Island, 12.

*Trade Union Membership in Canadian Cities.*—There are 29 cities in the Dominion, eight less than the number recorded in 1930, which have not less than 20 local branches of the various classes of labour organizations represented in the Dominion. These localities contain about 69 per cent of all local branch unions in Canada, and with their 1,258 reporting branches represent a little more than 57 per cent of the total reporting branches. The local branch unions in these 29 cities contain nearly 51 per cent of the total trade union membership of 310,544 in the Dominion as reported from headquarters of the central organizations or as secured from other reliable sources.

Montreal occupies first place in the list of cities, and including the National Catholic unions, has 199 local branches of all classes, 158 of which reported 41,110 members; Toronto stands second with 147 branches, 110 of which reported 25,626 members; Vancouver ranks third with 113 branches, 89 of which reported 15,621 members; Winnipeg is fourth with 110 branches, 87 of which reported 13,798 members, and Calgary stands fifth with 74 branches, 58 of which reported 4,859 members. The remaining 24 cities in order of number of branches are Edmonton, 72 branches, 59 reporting 5,393 members; Quebec, including the National Catholic unions, has 69 branches, 59 reporting 5,958 members; Ottawa, 61 branches, 50 reporting 4,592 members; Hamilton, 60 branches, 50 reporting 4,726 members; London, 53 branches, 41 reporting 3,788 members; Victoria, 47 branches, 37 reporting 2,054 members; Regina, 46 branches, 41 reporting 1,803 members; St. John, 45 branches, 35 reporting 2,561 members; Saskatoon, 40 branches, 32 reporting 2,097 members; Halifax, 39 branches, 36 reporting 3,121 members; Windsor, 35 branches,

29 reporting 1,857 members; Sherbrooke, 35 branches, 33 reporting 1,294 members; Moose Jaw, 32 branches, 26 reporting 1,648 members; Fort William, 29 branches, 24 reporting 1,197 members; Lethbridge, 28 branches, 26 reporting 1,807 members; Moncton, 28 branches, 22 reporting 2,633 members; Port Arthur, 27 branches, 19 reporting 1,367 members; St. Thomas, 27 branches, 22 reporting 1,676 members; Brandon, 26 branches, 20 reporting 790 members; North Bay, 26 branches, 21 reporting 1,581 members; Sault Ste. Marie, 22 branches, 19 reporting 609 members; Stratford, 22 branches, 20 reporting 1,751 members; Brantford, 21 branches, 20 reporting 777 members; Kitchener, 20 branches, 15 reporting 355 members.

Of the 2,225 branch unions which reported their membership, 19 have 1,000 members or more, seven less than the number in this class in 1930, the reporting branch with the largest following having 3,106 members.

*Trades and Labour Congress of Canada.*—This organization was originally established in 1873, and is the recognized head of the internationally organized trade unionists in the Dominion, its efforts being mainly to secure legislation in the interests of wage-earners. The American Federation of Labour and 58 of its more important affiliates, as well as three purely Canadian central bodies have affiliated the whole of their respective memberships by paying to the Congress the regular *per capita* tax. A number of local branches of international organizations had also affiliated individually by paying the regular tax. The congress also has under direct charters two provincial federations of labour, 38 trades and labour council and 42 local unions, the total membership being 162,431.

*All-Canadian Congress of Labour.*—This organization came into existence in March, 1927, absorbing the Canadian Federation of Labour, and declared that "the Canadian labour movement must be freed from the reactionary influence of the United States controlled unions." The congress has eleven Canadian central organization, including the Canadian Brotherhood of Railway Employees, as well as 31 directly chartered local unions and 14 labour councils, the total membership being 28,322.

*One Big Union.*—The One Big Union commonly called the O.B.U., had its inception at a conference held in Calgary, Alberta, in March, 1919, its promoters being members of old established unions, who, however, deserted the parent bodies to set up an industrial union "to organize the wage-earners according to class and class needs." At the close of the

year 1919, after nine months' existence, the membership was reported at 41,150 comprised in 101 local units. The Trades and Labour Congress of Canada, offering opposition to the O.B.U., as did also the various international craft unions whose form of organization was being challenged, the membership of the new body began to decline and has not again reached the figure for 1919. For 1931 the Canadian membership of the O.B.U. was given at 24,260, comprised in 46 local units.

*National Catholic Unions.*—The advent of these bodies took place in 1901 and in 1921, with a view to co-ordinating their activities, the Federation of Catholic Workers of Canada was formed. The great majority of the members of these unions are resident in the province of Quebec, where the clergy have encouraged their formation. At the end of the year there were 115 local unions and 6 study circles, their total combined membership being given at 25,151.

The report makes the customary references to the various federated bodies which have been formed as part of the plan of labour organization in North America for the purpose of co-ordinating the activities of the closely allied or particular trades in dealing with trade or other matters of like concern to all members of the unions represented.

*Organized Workers in the World.*—In addition to the information published in the report in regard to the numerical standing of the labour organizations in Canada and the United States figures are given showing the strength of organized labour in 63 other countries, the aggregate for the 65 countries enumerated being 50,040,055, distributed as follows:—

Argentina.. . . .	112,000
Australia.. . . .	911,541
Austria.. . . .	999,137
Belgium.. . . .	724,408
Bolivia.. . . .	5,000
Brazil.. . . .	116,500
British Guiana.. . . .	1,073
Bulgaria.. . . .	31,450
Canada.. . . .	310,544

Uruguay.. . . .	5,000
Venezuela.. . . .	25,972
Yugoslavia.. . . .	63,886

*Revolutionary Labour Organizations.*—The Third (Communist) International, which was established in Moscow on March 6, 1919, and which is termed the chief revolutionary political organization, the report states, was responsible for the setting up of the Red International of Labour Unions in Moscow in July, 1920, as a medium through which to propagate the communist doctrine in the Labour unions, and which proclaims itself to be "an international which, together with the Communist International, will organize the working class for the overthrow of capitalism, the destruction of the bourgeois state and the setting up of the dictatorship of the proletariat, an international which will seize all the means of production and establish the communist commonwealth." The Communist International since its inception has stressed the importance of its members maintaining close contact with the trade unions, which it terms the natural link between the Communist Party and the working class, and it is only through this agency, it declares, that the party can successfully propagate its principles. As the representative in the Dominion of the Communist International the Communist Party of Canada (Originally the Workers' Party) was formed with headquarters in Toronto, the

Moscow body being recognized as the only real centre of world revolutionary activities.

Following the conviction in Toronto in November, 1931, of eight communist leaders who were charged under section 98 of the Criminal Code with (1) being members of an unlawful association, (2) acting as members of an unlawful association, and (3) being parties to a seditious conspiracy, seven of them were sentenced to five years and one to two years' imprisonment, and all property of the Communist Party seized at the time the men were arrested was ordered forfeited to the crown. Appeals against conviction were subsequently entered, bail was set at \$20,000 each and on December 14, the necessary bonds having been raised, the men were released from custody. The appeal was subsequently dismissed and the convicted men taken to Portsmouth penitentiary to serve their sentences. It is understood that the Ontario indictment was the first proceedings in which the legality of the Communist Party as such was called into question, and it was stated that the result is virtually to declare that party an outlaw in the Dominion of Canada. In connection with the trial the Communist Party called a protest meeting to be held in front of the city hall on the night of November 2, the opening day of the trial. The two members of the firm which printed handbills announcing the meeting were cited for contempt of court and fined \$25 each. Protest strikes were called by the Workers' Unity League for the opening day of the trial, but there was little if any response to the demand. The Canadian Labour Defence League, an adjunct of the Communist Party, issued a manifesto subsequent to the trial calling for conferences for the repeal of section 98 of the criminal code.

With a view to propagating the communist doctrine among the Canadian youth there is the Young Communist League, a body which was formed under the auspices of the Communist Party, and which is affiliated with the Young Communist International of Moscow, and for the younger children there is a body known as the Young Pioneers. The official representative in America of the Red International of Labour Unions is the Trade Union Unity League, originally known as the Trade Union Educational League, which with its reorganization under the new name has made provision for the setting up of industrial unions on a dues-paying basis, a plan entirely opposite to the original scheme of the league. The "boring from within" process, which adherents in Canada of the Red International had for some time carried on in trade unions of

which they were members, having in many cases resulted in their expulsion, and leaving them without opportunity to carry on communist propaganda in the ranks of organized labour, they formed what is known as the Workers' Unity League, which is the Canadian section of the Red International of Labour Unions, designed to organize the workers in Canada into revolutionary industrial unions, and is pledged to the program and policy of the Russian body.

Following closely on the conviction in Toronto of the eight communist leaders the judge who presided in district court at Estevan, Sask., in an appeal against a sentence for vagrancy of an organizer for the Mine Workers' Union of Canada, a body which in May, 1931, became an affiliate of the Workers' Unity League, dismissed the appeal and branded both of the organizations just mentioned as unlawful associations. A member of the Workers' Alliance of Victoria, B.C., an alleged communist organization, was convicted on a charge of inciting to mutiny and sentenced to two years' imprisonment. It was subsequently stated that the British Columbia Court of Appeals had granted a new trial, but the deputy attorney-general of the province later announced that the prosecution had decided to appeal the case to the Supreme Court to Canada.

In addition to the above convictions it is understood that up to the close of the year 1931 there were 180 adherents of the Communist Party either convicted or facing trial on various charges including assault, sedition, unlawful assembly and inciting to riot. During the year 1931 Communist halls were raided in Vancouver, Edmonton, Quebec and Victoria, in which raids communist literature intended for propaganda purposes was seized.

In 1930 the House of Representatives of the United States authorized the creation of a special committee to investigate communist activities in that country. The report of the committee was made in 1931, which *inter alia* stated that "Industry in the United States has been the principal point of penetration by the communists; they have announced that if world revolution is to take place it must originate among the masses of the workers, and that in order to assure revolution and the ultimate success of their aims they must create discontent and dissatisfaction among the working people, with the hope of winning them to their cause." Among the recommendations of the committee was one to the effect that the Communist Party of the United States or any counterpart of the party advocating the overthrow of the republican

form of government of the United States by force and violence, or affiliated with the Communist International at Moscow, be declared illegal and that the naturalization laws of the United States be amended so as to cancel the naturalization certificate of a communist. In Australia leagues of citizens and of returned soldiers are urging that communism be declared illegal in that country.

*International Federation of Trade Unions.*

—The Report states that the International Federation of Trade Unions, which was originally established in Berlin, Germany, in 1901, ceased to function during the world war and was re-organized in 1919 at Amsterdam, Holland, transferred its headquarters back to Berlin in 1931. Among the objects of the federation are (1) unity of the international working class, (2) the development of international social legislation, and (3) to avert war and combat reaction. The trade union movement of the Dominion as represented by the Trades and Labour Congress of Canada is affiliated with the Federation and the president of the congress is a member of its general council. The I.F.T.U. also has in affiliation the national centres of the following 26 countries: Argentine, Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Greece, Holland, Hungary, Latvia, Luxembourg, Memel, Palestine, Poland, Roumania, South Africa, Southwest Africa, Spain, Sweden, Switzerland and Yugo-Slavia, with a combined membership of 13,781,381, as well as 28 international trade secretariats.

Immediately following the formation of the Red International of Labour Unions, in accordance with its declared policy, attack was launched on the International Federation of Trade Unions, which the Red International declared was reactionary and only an appendage of the League of Nations and not functioning in the interests of the working class, and the officers of the federation were declared to be traitors to the workers of all countries. In defending the activities of the federation the officers have pointed out how the adherents of the Moscow body, through their system of "boring from within", have disrupted some of the old-established European trade unions.

*Industrial Workers of the World.*—The report states that the Industrial Workers of the World, commonly known as the I.W.W., was formed in 1905 in direct opposition to the trade union movement as represented by the American Federation of Labour, and is the main industrial union in North America, declaring itself to be the advocate of what it

terms revolutionary industrial unionism with an objective of the abolition of the wage system. Among the founders of the organization were Eugene V. Debs, Wm. D. Haywood and Daniel De Leon, leader of the Socialist Labour Party, all of whom are now deceased. The I.W.W. was originally intended to be a political as well as an industrial organization, but at the convention in 1906 a split occurred over the officials of the Western Federation of Miners (then the Mining Department of the I.W.W.) endorsing in a Colorado election certain candidates not identified with any radical party, the result being that the president, C. O. Sherman, who was accused of being a party to this proceeding, was ousted from office, and the position of president was subsequently abolished. In 1908 the political plank in the I.W.W. platform was discarded, and De Leon and his followers who opposed this action were expelled. The expelled members immediately set up what was termed the Detroit faction of the I.W.W., the original platform of the parent body being adhered to. In 1915 the Detroit faction adopted the name of Workers' International Industrial Union, and a few years later changed its headquarters to New York State. This organization never made much headway, and during 1924 passed out of existence, its records and property being turned over to the Socialist Labour Party.

Following the formation of the I.W.W. there many sharp conflicts between its adherents and members of the old established craft unions. In 1917 the organization was called upon to defend itself against an action taken by the United States Government. The indictment charged members of the I.W.W. with interfering with the carrying out of certain wartime measures of the government, and following their trials, which took place in Chicago, 94 members of the organization were convicted, their sentences varying from ten days to twenty years, with fines aggregating \$2,750,000. Under other indictments, both Federal and State, more than 1,000 members of the I.W.W. have been from time to time convicted. Some of those members of the I.W.W. who were convicted under the Chicago indictment of 1917 subsequently accepted conditional pardons (detailed reference to which has been made in earlier issues of these reports), an action which led to a court case, the holding of a special convention and the expulsion of certain recalcitrant members who subsequently set up a dual I.W.W. under the title of "Emergency Program," but they do not appear to have made much progress, the membership never reaching any considerable number.

At a general meeting in Port Arthur of Canadian members a resolution was adopted

in favour of a Canadian administration with power to elect its own secretary-treasurer and to carry on organization and educational activity, etc., independent of headquarters in Chicago. The matter was referred to the general convention held in Chicago in November, 1931, at which it was decided to submit the proposal to a referendum vote, the proposal being subsequently adopted. The I.W.W. in 1905, the year of its establishment, claimed a membership of 400,000. For 1931 the total membership was stated to be 21,596, the number of members in Canada being 3,466, comprised in five branches.

*Labour in Politics.*—The report points out that the first proposal for independent political action on the part of labour in Canada was made at the convention of the Trades and Labour Congress of Canada held in Hamilton in 1887, it being declared that "the working classes of this Dominion will never be properly represented in parliament, or receive justice in the legislation of the country until they are represented by men of their own class." Following this suggestion the organized workers in some of the better organized industrial districts of the Dominion selected candidates for various offices, and in some rare instances elected their nominees to the Dominion Parliament and to the Provincial Legislatures as well as to municipal office, but it was not until 1921 that the Canadian Labour Party was formed. A number of provincial sections were established, and under their auspices candidates were nominated for office and some elected. In 1927 however, owing to removal of the name of the secretary of the party from the slate of municipal candidates by the Toronto Central Council of the C.L.P., which it was stated was dominated by communists, the secretary of the main body resigned and the organization became disintegrated. The British Columbia section of the C.L.P. dissolved, the Nova Scotia and Ontario sections have not met since 1928, leaving two sections—Quebec and Alberta—still in existence.

In 1923, 1924 and 1931 efforts were made to have the Trades and Labour Congress of Canada engage in politics. These proposals were in each case defeated, the congress reaffirming its earlier policy in regard to political action which is designed to prevent the organization from becoming involved in political entanglements. British Columbia, Manitoba and Ontario have independent labour parties, that in the last named province being formed by delegates to the 1927 convention of the Canadian Labour Party who objected to the adoption of a number of what were considered revolutionary resolutions. In two of the maritime provinces and in Saskatchewan indepen-

dent labour parties were formed during 1931, and the All-Canadian Congress of Labour became the sponsor for the National Labour Party, whose aim is declared to be "to organize the workers politically for the purpose of establishing, by constitutional means, an equitable economic and social order." In the by-election held on August 10, 1931, for the seat in the House of Commons for East Hamilton, there were three candidates, the nominee of the Labour Party being elected by a large majority, while the Labour candidate in the by-election for a seat in the Alberta legislature was defeated. There were four Labour nominees in the Quebec provincial election, held on August 24, 1931, but all were defeated. There were 25 localities in which Labour candidates were nominated for municipal office. The number of nominees for the respective positions and the number elected were: Mayors, 6 nominated and 4 elected; only nominee for reeveship elected; controllers, 2 nominated and both elected; commissioners, 2, both successful; aldermen 78—25\* elected; school trustees, 32—9 elected, making in all 121 candidates, of whom 43 were elected to the offices sought.

*Trade Union Benefits.*—The report contains a chapter dealing with the expenditures made on account of trade union benefits during the year 1931. Of the 25 Canadian central organizations eleven reported having made disbursements, the total amounting to \$75,440.81, an increase over the previous year of \$8,504.63. Of the 84 international bodies with branches in Canada 59 reported disbursements for benefits, payments on account of death benefits being made during 1931 by 55, strike by 30, sick and accident by 20, old age pensions by 12, unemployed and travelling by 8. The total expenditures for benefits in Canada and other parts of the jurisdictions of the respective central international organizations which reported amounted to \$26,856,874, a decrease of \$1,222,952 as compared with the disbursements by 64 organizations in the year 1930. The outlay for the various benefits was as follows:—

Death benefits.. . . .	\$15,755,433
Unemployed and travelling benefits.. . . .	466,034
Strike benefits.. . . .	790,344
Sick and accident benefits.. . . .	3,472,849
Old age pensions and other benefits.. . . .	6,372,214

In addition to the payments which may have been made as benefits to Canadian members by international organizations 708 of the local branches of such unions in Canada made disbursements for benefits to their own members; 126 branches of Canadian organizations, 95 National Catholic syndicates and 14 independent units also made benefit payments to

their members, the total expenditures for the year 1931 being \$543,191, an increase of \$64,030 as compared with the outlay for benefits by 828 local branch unions in the previous year. The total payments by all classes of local unions on account of the benefits indicated were as follows:—

Death benefits.. . . .	\$112,151
Unemployment benefits.. . . .	167,432
Strike benefits.. . . .	10,235
Sick benefits.. . . .	176,059
Other benefits.. . . .	77,314

*Trade Union Directory.*—The Twenty-first Annual Report on Labour Organization will be found to be a most complete trade union directory, containing like earlier reports, the names and addresses of the chief executive officers of all of the more important central labour organizations in North America as well as those of their representatives in Canada, together with similar information for all delegate bodies and local branch unions in the Dominion. Besides the chapters dealing with the various labour bodies, the report

contains (1) a chapter on incidents of interest concerning organized labour, (2) a list of Canadian labour papers and official trade union journals, and (3) a list of conventions of central labour organizations to be held during the year 1932.

*Non-Trade Union Associations.*—Besides the trade unions whose names are printed in the report there are in the Dominion a number of associations of wage-earners, which, though not identified with the labour movement, are considered to be of sufficient importance to justify their names being published in the present volume. The three principal groups are made up of associations of school teachers, Government employees and commercial travellers, all of which have large followings. With the explanation that the associations discussed are not to be confused with the regularly constituted labour organizations, a chapter is included giving particulars of such known bodies, of which there are 113, the combined reported membership being 105,152.

## RECENT LABOUR UNION ACTIVITIES

### Special Convention of United Mine Workers of America, District 26

A special convention of the United Mine Workers of America, District 26, was held at New Glasgow, N.S., April 17-27, 1932, with about one hundred and forty delegates present, representing more than 12,000 miners. President D. W. Morrison of Glace Bay presided. This convention was called for the purpose of dealing with recommendations contained in the report of the Duncan Commission (LABOUR GAZETTE, March, 1932, page 270), which recommended decreases in wages paid colliery workers of from 10 to 12½ per cent, and the closing down of certain mines. The District executive had conceded the wage decreases, but contended that the closing down of mines was a matter of adjudication between the company and the Department of Mines. On March 14, the recommendation of the District executive, which was to accept the wage decreases, was submitted to a referendum vote of the membership. The executive's recommendation was defeated by 1,144 votes. As a result of the adverse vote, the District executive called a special convention in accordance with the provisions of the United Mine Workers' constitution. After the seating of the regular delegates had been approved, a motion was introduced to permit five representatives of the Mine Workers Union of Canada to be seated in the convention as fraternal delegates. This motion was defeated by a vote of 88 to 50.

The first business to be taken up was the report of the policy committee on the Duncan award. The committee was not unanimous, and a majority and a minority report was presented. The former recommended acceptance of reductions ranging from 10 to 12½ per cent, providing however that proper provision be made for the men displaced by the closing of some of the collieries. The minority report, while agreeing on major details, further recommended that a referendum vote be authorized to determine whether or not the miners wished to continue in affiliation with the United Mine Workers of America or come under the control of a provincial association. The minority report was ruled out of order by the chairman, and his decision was upheld by the delegates.

During the debate on the majority report. Mr. Thomas Kennedy, secretary-treasurer of the United Mine Workers of America, was asked to address the delegates. He reviewed conditions in the coal mining industry throughout the whole jurisdiction, and as a result of unsettled conditions he strongly urged the delegates to accept the reductions. In reply to a question as to what stand the International Union would take in regard to the miners of Nova Scotia should they decide to strike, Mr. Kennedy informed the delegates that the International Union would stand by the Nova Scotia miners in the same

manner as it was standing by the miners on strike in the United States; but he pointed out that there was only \$500,000 in the treasury while approximately 100,000 members of the organization were on strike across the border, and that the men could figure out for themselves how much financial assistance would be available. Another feature of the discussion was the introduction of a motion to censure the representatives of the press for the alleged use, by one of the papers, of a sub-heading "Communist Group" in referring to certain delegates in the convention. This motion was defeated by a vote of 94 to 6.

When the question of the majority report was finally put to a vote, it was defeated by 77 to 57. A motion was then introduced recommending that a committee be formed of representatives from each sub-district for the purpose of drafting a policy, which would later be discussed by the delegates.

The convention adopted a motion of censure on Premier G. S. Harrington of Nova Scotia following the receipt of what was considered an unsatisfactory reply to a telegram sent by the District president, asking if the government approved the closing of four Nova Scotia mines in accordance with the re-allocation plan.

Considerable discussion took place on the report of the second policy committee, which was finally approved by a vote of 109 to 5, the recommendations being as follows: (1) that the District executive stand by the policy laid down at the last District convention in June, 1931, calling for wage increases varying

from 10 to 20 per cent; (2) that the executive be instructed to press for a uniform rate of wages all over the District, the higher rates prevailing to be the basis; (3) a contract for two years, to expire April 1, 1934; (4) that the company wipe off rent and coal bills accumulated during the period of unsteady employment; (5) if tonnage per man increases after a period of one year, men to receive an increase based on an increased production per man, rates agreed upon to be basic rates; (6) wherever desirable local contracts to be arranged between men and management, these contracts to be ratified by local union; (7) that the executive be instructed to press for the necessary legislation with a view to stopping the proposed re-allocation; (8) that the membership affected by the re-allocation plan demand from the government maintenance for themselves and families; (9) calling for the selection of three independent engineers for the purpose of deciding on the feasibility of the proposed re-allocation plan; (10) that the entire result of negotiations be given to the membership to vote on by referendum, and in the advent of an adverse vote, the executive board stand instructed to call a cessation of work; (11) that the holding of the next annual convention be left to the discretion of the District executive board. In the report of the committee it was asserted that the recommendations were based on the assumption that steps were being taken by the Federal Government to provide markets for an additional 1,000,000 tons of Nova Scotia coal.

### National Association of Marine Engineers of Canada, Inc.

The twenty-first biennial convention of the National Association of Marine Engineers of Canada, Inc., was held at Ottawa on February 20-26, with sixteen delegates present, representing all but one sub-council.

President McDonald, in his report, reviewed conditions during the period since the last convention in 1930, and gave the delegates information he had obtained from personal investigations made during a trip from the east to Regina. The Government, he said, contemplated a complete revision of the Canada Shipping Act: it had been the practice in the past for the executive of the Trades and Labour Congress of Canada to present to the Government a brief synopsis of desired legislation, but this year a reservation had been requested so that the officers of the Association might be permitted to present their own case in greater detail some time during the convention. The delegates were urged to give

careful consideration to the preparation of the brief dealing with the carrying of Canadian products from the head of the great Lakes to American ports and then trans-shipping either through American channels or to Montreal in steamers owned and managed by parties outside of Canada. President McDonald pointed out that as international relations were involved, the enacting of the necessary legislation would be very difficult.

According to the report of the secretary, total receipts, including balance brought forward, amounted to \$7,648.11, and disbursements totalled \$4,554.78, leaving a balance on hand of \$3,093.33. It was impossible to supply a correct record of the membership at the close of 1931, but 1,246 was the figure at the close of 1930.

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, spoke on

the work of the labour movement both from a national and international standpoint.

On February 26, representatives of the Association waited upon Hon. Alfred Duranleau, Minister of Marine, and presented certain requests which they considered should be embodied in the new Shipping Act, understood to be in course of preparation.

Among the resolutions adopted were the following:—

Requesting the Government to prevent companies from operating in Canadian coastal trade unless they pay their engineers Canadian pay and comply with the Canada Shipping Act;

That all self-unloading ships carry additional certified marine engineers;

Abolition of temporary certificates;

Establishment of life saving stations from Kingston to the head of the Great Lakes;

That the law governing the ownership of ships be the same in Canada as in the United States;

That an agreement be made or duty raised to put ships of foreign registry in fair competition with those of Canadian registry;

That continued efforts be made to obtain a pension protection for employees on all government vessels;

That seamen be compensated for accidents, etc.; and that this question be submitted to the Geneva conference;

That all self-propelled vessels of any power have certified engineers;

Establishment of an eight-hour day on all ships in inland water;

That safety engineers examine all ships for seaworthiness before a certificate of clearance is given;

Appointment of a new commission to define the limits and qualifications of masters and mates, and that the old fixed limits be abolished.

Officers elected were: President, T. O'Reilly, Sault Ste. Marie, Ont.; First vice-president, W. B. Parks, Saint John, N.B.; Second vice-president, J. E. Boucher, Sorel, Que.; Secretary-treasurer, W. A. MacDonald, Halifax, N.S.

### Proposed New Labour Code in Turkey

A Bill embodying a new labour code has been presented to the Turkish Parliament. For some time past the Turkish Government has had under consideration a comprehensive reform of the social legislation of the country. The Bill as now presented to Parliament by the Government comprises no fewer than 161 clauses, dealing with the following subjects: employment of women and children; hours of work; rest periods; health and safety; factory inspection; wages and contracts of employment; shops attached to works; accident insurance; freedom of association; employment exchanges; conciliation and arbitration; and the establishment of a Superior Labour Council.

The proposed legislation applies to the main branches of industry. Agriculture, family undertakings and establishments employing fewer than ten workers, are exempted. Children under 12 may not be admitted to industrial employment. Children between 12 and 16 years of age may not be employed in industry unless they possess a medical certificate of physical fitness. Special regulations are contemplated for educational and charitable institutions and for apprenticeship. Workers may not be employed underground

or in certain other dangerous occupations unless they are medically certified fit. The "effective" working hours of manual and non-manual workers in industry are to be limited to eight in the day and forty-eight in the week, or to a maximum for a longer period equivalent to eight in the day. Night work for women and children under 16 is forbidden and spells of work extending over four hours must be broken by a pause of at least half an hour. Provision is made also for weekly rest; for factory inspection; compulsory insurance against accidents; right of association; employment exchanges; and conciliation and arbitration as ordinary means for the settlement of industrial disputes.

The German Federal Commissioner for Suburban Settlements has announced plans for the construction of 16,000 wooden houses, costing \$11,425,000 for the unemployed in the suburbs of German industrial cities. The German authorities calculate that small wooden houses can be constructed for \$429 each, the balance of the cost being for furniture and equipment. The settler is required to give his own work in the construction of his house.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Sixteenth Session of the International Labour Conference

THE Sixteenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from April 12 to 30.

Fifteen previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923 (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August, 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); Geneva, 1929 (LABOUR GAZETTE, July, 1929); Geneva, 1929 (LABOUR GAZETTE, December, 1929); Geneva, 1930 (LABOUR GAZETTE, July, 1930); and Geneva, 1931 (LABOUR GAZETTE, July, 1931).

The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." It will be observed that two sessions of the Conference were held in 1926 and also in 1929.

Each Member State is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-third majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented in the International Labour Organization for acceptance or other-

wise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendation or Draft Conventions before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action.

In Canada, the provisions of the different Draft Conventions and Recommendations have been examined in all cases by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction and they have thereupon been brought before the Dominion Parliament and the Provincial Governments, together with the Law Officers' reports on the subject of jurisdiction.

#### Conference Agenda

The agenda of the Sixteenth Session of the Conference comprised four items as follows: (1) Abolition of fee-charging employment agencies; (2) Invalidity, old-age and widows' and orphans' insurance; (3) Age of admission of children to employment in non-industrial occupations (second discussion); and (4) Partial revision of the Convention concerning the protection against accidents of workers employed in loading or unloading ships.

In accordance with the double-discussion procedure adopted by the Conference some year ago whereby the subject matters of Draft Conventions are given preliminary consideration at one session and adopted by the Conference in the following year, the first two items on the agenda mentioned above were set down for preliminary examination with a view to the possibility of drawing up a Draft Convention or Recommendation at next year's session for submission to the Member States of the International Labour Organization. The third item deals with a subject which was before the Conference in 1931, when a questionnaire was drawn up for submission to the Member States in order to ascertain their views more definitely. The fourth item deals with a Convention for the prevention of accidents to workers employed in loading or unloading ships, which had been adopted by the Conference in 1929. Subsequently several important maritime countries had pointed out

The Hon. Senator G. D. Robertson, former Minister of Labour of Canada, who was elected President of the 16th Session of the International Labour Conference (League of Nations).

that some of the technical provisions of the Convention were such as to prevent its ratification by them. The Governing Body of the International Labour Office accordingly agreed to the Convention being submitted to the present Conference for the consideration of twenty different points on which amendments were desired; none of these amendments, however, affected the basic principle of the Convention.

### Decisions of the Conference

The decisions of the Sixteenth Conference may be summarized as follows:—

#### *Abolition of Fee-Charging Employment Agencies*

After discussion and the reference of this question to a special committee, the Conference decided unanimously to place this question on the agenda of its next Session and a questionnaire was drawn up to be submitted to the various Member States of the International Labour Organization.

#### *Invalidity, Old-Age and Widows' and Orphans' Insurance*

After a discussion, the Conference decided by 108 votes to 2 to place this question on the agenda of the next Session of the Conference.

A questionnaire on this subject was also approved for submission to the respective Member States.

#### *Age of Admission of Children to Employment in Non-Industrial Occupations*

The Conference adopted by 89 votes to 1 a Draft Convention on this question, prohibiting the employment of children in non-industrial occupations.

The Conference also adopted unanimously a Recommendation on the same subject.

#### *Partial Revision of Convention concerning the Protection against Accidents of Workers employed in Loading or Unloading Ships*

The Conference adopted unanimously the various proposals submitted with regard to the amendment of the Convention in question.

A Recommendation was adopted unanimously for expediting reciprocity as provided for in the above mentioned Convention.

A Resolution was also adopted unanimously respecting reciprocity.

A special committee on resolutions was instituted by the Conference on the recommendation of the Standing Orders Committee.

### Application of Conventions

A committee of the Conference was appointed to examine the annual reports made by member countries to the International Labour Office on the measures which had been taken to give effect to the particular Conventions

which had been ratified by the respective countries. This committee presented a unanimous report, which was adopted by the Conference, indicating that the application of ratified Conventions is becoming increasingly effective. So far as any discrepancies discovered by the Committee were concerned, satisfactory assurances had been given by most of the delegations concerned of the ready co-operation of their respective governments.

Professor O'Rahilly, Government delegate of the Irish Free State, who served as chairman of this committee, observed in presenting the report of the committee to the Conference that he had never ceased to be astonished at the wonderful advance in international law and co-operation which was exemplified in the work of this committee. "If anybody had said fifteen years ago that the old ideas of absolute sovereignty would thus be quietly whittled away, the statement would have been found absolutely incredible. We have here a court of enquiry into the observance of international treaties—for strictly speaking the Conventions are international treaties—where countries great and small come before us to explain and justify and where, as in the first offenders' court, we so to speak pat them on the back and tell them not to do it again. And these treaties and conventions concern the internal government within the territory of the respective states. I personally consider that this is a tremendous progress which we should more consciously realize. Our committee has been a bar of international public opinion which is really unique in the world. There is no other type of international control equivalent to the Committee on Article 408, for even the Mandates Commission of the League of Nations is not concerned with independent sovereign territories. Our success has been largely due to our extraordinary composition—when a worker from Amsterdam can get up and criticise the social conditions in a Danubian country, and when a Swiss worker can criticise the administration of a great colonial power, and when these countries accept such criticisms and reply to them... ..

... Therefore, we have led the world not only in the practical application of social amelioration, but we have also led it in fruitful ideas of international solidarity which, though most of us hardly realise it as yet, have burst the rigid categories of the past and have blazed the trail towards world peace and justice."

### Resolutions

A number of resolutions were adopted, dealing with various subjects which were referred to the Governing Body of the International Labour Office for attention, as follows: (1)

safeguarding the interests of distant countries in the work of the International Labour Organization; (2) the forty-hour weekly work period; (3) unemployment; (4) methods and conditions of recruiting labour and terms of labour contracts; (5) systems of collective bargaining in agriculture; (6) workers' housing; (7) silicosis; (8) direct representation at the Conference of colonies and mandated territories; (9) the effect of opium-smoking on workers; and (10) a "gold truce" to prevent further aggravation of the economic situation.

### Countries Represented

Of the fifty-six countries which are members of the International Labour Organization, forty-nine sent delegates to the Sixteenth Session, including Mexico, which became a member of the Organization in September last. A list of the countries represented follows:—

Argentine Republic	Irish Free State
Albania	Italy
Austria	Japan
Belgium	Latvia
Bolivia	Liberia
Brazil	Lithuania
Bulgaria	Luxemburg
Canada	Mexico
Chile	Netherlands
China	Nicaragua
Colombia	Norway
Cuba	Persia
Czechoslovakia	Peru
Denmark	Poland
Dominican Republic	Portugal
Estonia	Rumania
Ethiopia	Siam
Finland	South Africa
France	Spain
Germany	Sweden
Great Britain	Switzerland
Greece	Uruguay
Guatemala	Venezuela
Hungary	Yugoslavia
India	

In addition, the non-member countries of Egypt and Turkey sent observers, and it is expected that both these countries will shortly become members of the International Labour body.

The total number of delegates in attendance at the Conference was 336, including 84 Government delegates, 32 Employers' and 31 Workers' delegates with 188 advisers.

### Canadian Delegation

The Canadian delegation to the Conference comprised the following:—

#### Government Delegates—

The Honourable Senator G. D. Robertson, Ottawa, Ontario.

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

#### Technical Advisers to Government Delegates—

Hon. C. J. Arcand, Minister of Labour, Quebec, P.Q.

Mr. Robert H. McGowan, Cobalt, Ont.

Mr. Pierre Beaulé, Quebec, P.Q.

Mr. E. H. Cook, Winnipeg, Man.

#### Employers' Delegate—

Mr. Melville P. White, Canadian General Electric Co., Toronto, Ont.

#### Workers' Delegate—

Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa, Ont.

#### Technical Adviser to Workers' Delegate—

Mr. Percy R. Bengough, Vice-President, Trades and Labour Congress of Canada, Vancouver, B.C.

### Officers of the Conference

The following were elected as officers of the Conference:—

*President.*—Hon. Senator G. D. Robertson, former Minister of Labour of Canada.

*Vice-presidents.*—Mr. Hammar skjold, Government Delegate (Sweden); Mr. Schmidt, Employers' Delegate (Austria); and Mr. Kupers, Workers' Delegate (Netherlands).

*Secretary-General.*—Mr. Albert Thomas, Director of the International Labour Office.

*Deputy Secretary-General.*—Mr. Harold B. Butler, Deputy Director of the International Labour Office.

### Appointment of Committees

The following committees were appointed by the Conference:—

*Selection Committee.*—Twenty-four members: 12 from the Government group and 6 from the Employers' and Workers' groups, respectively.

Dr. W. A. Riddell was chosen as one of the members of the Government group and Mr. Tom Moore as one of the substitute representatives on the Workers' group in this committee.

*Standing Orders Committee.*—Twenty-one members: 7 from each group.

Mr. Tom Moore was chosen as one of the Workers' group in this committee.

*Drafting Committee.*—Seven members, including Hon. Senator Robertson, President of the Conference, and Mr. Binet, Legal Adviser on the staff of the International Labour Office, formerly of Montreal.

*Committee on Abolition of Fee-charging Employment Agencies.*—Thirty-six members, 12 from each group.

Mr. R. H. McGowan was one of the Government group and Mr. Tom Moore one of the Workers' group in this committee.

*Committee on Invalidity, Old-Age and Widows' and Orphans' Insurance.*—Forty-eight members, 16 from each group.

Canada was represented on this committee by the Honourable Mr. Arcand in the Government group, by Mr. Melville P. White in the Employers' group, and by Mr. Percy R. Bengough in the Workers' group.

*Committee on the Age of Admission of Children to Employment in Non-Industrial Occupations.*—Fifty-six members: 28 Government, 14 Employers' and 14 Workers' representatives.

Canada was represented on this committee by Mr. E. H. Cook of the Government group.

*Committee on the Partial Revision of the Convention concerning the Protection against Accidents of Workers engaged in Loading or Unloading Ships.*—Twenty-four members, eight from each group.

*Committee on Article 408.*—Thirty-two members, 16 Government, 8 Employers' and 8 Workers' delegates.

Mr. Tom Moore was elected one of the Vice-Chairmen of the Workers' group in attendance at the Conference.

### Opening Address

Professor E. Mahaim, Chairman of the Governing Body of the International Labour Office, presided at the opening of the session of the Conference. He referred with deep feeling to the loss which the International Labour Organization has sustained during the past year by the deaths of three of its leading members, namely, Mr. Arthur Fontaine, who had served as Chairman of the Governing Body from the inception of the work in 1919; Monsignor Nolens (Holland), who had attended all the previous sessions and who had served as President in 1926; and Mr. François Sokal (Poland), who also was one of the pioneers in the work of the League of Nations

and of the International Labour Office, and who had served as President of the International Labour Conference at its last annual session in 1931.

Professor Mahaim welcomed delegates and advisers present at the Conference and outlined the subjects which had been inscribed on the agenda. In conclusion he said:—

"I should like to emphasize the continuity and the effective nature of our work. Although there is a world crisis which is present to all our minds, and which calls for additional efforts from us all, it cannot be too strongly stressed that there is no crisis in the International Labour Organization. It is faithfully carrying out the program laid down by Part XIII of the Treaty of Peace. It is dealing successively with all the points in that program, without exception. Although the annual sessions of the Conference are in a sense independent of one another, they are bound together by the logical sequence with which one Convention follows on another. You have seen that all the drafts for Conventions now before you are a continuation of previous Conventions. We are proceeding by successive stages to build up a code of international labour legislation which, like all codes, represents a synthesis of rights and obligations. It is not conceivable that that work should be stopped, for its continuance is required by the principles of social justice.

"This, however, is not all. The report which the Committee of Experts on Article 408 has submitted to the Governing Body, and which the latter has sent forward to the Conference, deals with the carrying out of the Conventions and their adaptation by means of national legislation. The experts, who have made a careful and critical study of the Governments' replies, state that 'the application of the Conventions and the incorporation of their provisions in national legislation is being continued and consolidated, that steady progress is therefore being made in international labour legislation, and that through the collaboration of governments, employers and workers, such legislation is becoming an integral part of the social heritage of the workers'. What clearer evidence could be given of the utility of our work?

"Although, however, we are persevering in carrying out our essential program, we are not forgetting the important events which are now taking place in the world. We do not forget either the economic crisis or unemployment. The discussions of our committees and the concrete proposals which have been made are evidence of this. The general distress, as well as the distress of certain countries and certain classes, is a matter of anxious concern to us. We realize that the solution does not lie altogether in our hands, but we affirm that the solution cannot be formulated without regard to social justice. We are therefore confident that by persevering in our work we shall be helping to promote a general recovery."

### The Presidential Address

Hon. Senator G. D. Robertson, on his election as President of the Conference, which was proposed by the Government delegate of Finland and supported by Government dele-

gates from Germany, the Irish Free State and Cuba, as well as by the Chairmen of both Employers' and Workers' groups in attendance at the Conference delivered the following address:—

"Ladies and Gentlemen, I deeply appreciate the great honour which you have conferred upon me by electing me President of the Sixteenth Session of the International Labour Conference, an honour which I accept with great pleasure, not only for myself, but on behalf of my country. I am aware that, in asking me to preside over your deliberations, you are also desirous of paying a tribute to the country which I have the honour to represent, for its continued loyalty to the International Labour Organisation, and its adherence to those principles that are at the basis of the Organisation. I also feel that it is a tribute not alone to my country, but to all the countries in the New World, and especially those in North America.

"Since the last Session of the Conference we have had the great satisfaction of seeing Mexico become a Member of the League of Nations and of the International Labour Organisation. As the President of this Conference and as the representative of a neighbouring State which has always enjoyed the most friendly relations with the Republic of Mexico, it is a great pleasure to me to welcome the Delegation of that country to the International Labour Conference.

"We all learned with the most profound regret of the death of Mgr. Nolens, of Mr. Arthur Fontaine, and, during the last few days, of Mr. Sokal. It was my good fortune to become intimately acquainted with all three at the first International Labour Conference in Washington, where I came to appreciate their true worth and their zeal for social progress and the advancement of international labour legislation. Not only do we mourn our personal loss, but we realise that the cause which we all have at heart has suffered greatly in their passing.

"The International Labour Conference is meeting this year in a period of profound economic and financial depression, at a time when the attention of the world is largely directed to a solution of financial and economic problems, and to the resulting problem of unemployment. Some of the questions with which we have to deal at this Conference, in the light of the world situation, may seem of less moment, but when we remember that important part which just and humane conditions of labour play in international trade and commerce, and realise that peace can be established only if it is based upon social justice, it seems imperative that the Inter-

national Labour Organisation should continue to make its contribution to the solving of our present grave difficulties.

"One might fittingly observe that, with the passing of time, the problems confronting the International Labour Organisation continue unabated, and are perhaps increasing. For many years past the workers throughout the world have consistently urged the recognition of the right of organisation among themselves, to negotiate agreements with the employers with the approval and co-operation of national Government agencies. Much progress has been made in this regard until, during the past two or three years, a period of economic stress and depression seems to have overshadowed the world and rendered the problems of the Director and his efficient staff extremely difficult.

"In spite of all the difficulties with which the International Labour Organisation has met during the first twelve years of its existence, it has made for itself a permanent place in the world. Its influence cannot be estimated simply by looking at the number of ratifications. That does not seem to me at all an adequate or a true test. For there are many countries which have derived inspiration from Conventions which they have not been able to ratify. In some of the less industrialised countries, Conventions have often been taken as the ultimate goal rather than as an immediate objective. By that method progress has been made towards putting them into practice which often means a bigger step forward than actual ratification by some highly industrialised country where the Convention was already practically in operation before it was adopted.

"Moreover, the Labour Office is now coming to be regarded as an expert adviser in social matters. We find Governments like those of China and Egypt asking for its assistance in organising their Labour Departments and planning the foundations of their labour legislation. The knowledge and experience which the Office has accumulated is already very considerable, and the fact that it is now at the disposal of the world is a great factor making for social progress. I would further say that the existence of this Organisation furnishes an important element of confidence and optimism in the present crisis. It stands for the preservation of the standards which have been set up. It is a perpetual reminder that in times of economic stress the worker's standard of life and his conditions of labour should be maintained to the utmost possible limits. A great deal of the social legislation of the last twelve years has either been framed in accordance with the Conventions adopted by this Con-

ference or has taken them as the model to be aimed at. Those laws still stand to-day almost without modification, and the fact that they are standing is a guarantee against social reaction, which has very substantially helped to preserve social stability in the dark and difficult period through which we are now passing.

"We trust that the deliberations and conclusions of the Sixteenth Session will be in full accord with the Preamble to Part XIII of the Treaty, to the end that social justice may be the ultimate goal toward which both groups and national Governments will continue to strive.

"It is a good sign that the Conference should now be met together in undiminished numbers in the midst of the crisis. It is a proof that there is a general determination, not only on the side of the workers, but also among the Governments and the employers, that the work of social reconstruction to which this Organisation has made so valuable a contribution since the war shall not be destroyed.

"If we go forward in that spirit, with the intention of understanding each other's difficulties and of bringing about that international co-operation which is needed to solve them, I have no fear but that we shall emerge successfully from our present troubles. In that conviction, I declare open the Sixteenth Session of the International Labour Conference."

#### **Discussion of the Director's Report**

A lengthy discussion occurred in the Conference as in previous years on the Annual Report of the Director of the International Labour Office, in the course of which the work of the past year was reviewed in considerable detail and attention was directed to the major problems with which the International Labour Organization is confronted at present, including particularly those arising out of the widespread condition of industrial and trade depression and of unemployment.

In this discussion, to which seven plenary sittings were devoted, the voices of 31 countries were heard, the speakers being 54 delegates (26 for Governments, 13 for employers and 15 for workers), the Ministers of Labour of Belgium, Great Britain and Spain, and the Minister of Corporations of Italy.

For the main part the discussion was focussed on the economic situation, its repercussions on social conditions and policy and the possible means of escape from the situation. The ground for the discussion had already been prepared by the Director's Report, which set out the broad facts of the case, weighed the factors which enter into the problem, described the action already taken to deal with such of its element as

were clearly within the province of the International Labour Organization, and marked out the lines along which large-scale action to attack the evil at its roots might be undertaken by the national and international authorities having competence to deal with the economic, financial and political issues involved.

It is noteworthy that, though none of the speakers sought to conceal the gravity of the situation and the acute anxiety which still prevails, there was no tendency to despair of finding remedies. Some difference of opinion prevailed as to the contention of the workers' representatives that a general reduction of hours, accompanied by the maintenance of real wages, would ease the position. But there was no great cleavage of opinion as to the need of a considered and strenuous effort on the part of the whole world to reanimate and reconstruct its economic system. Frequent reference was made to "economic planning", which the Director had discussed in his Report, and a number of speakers expressed the opinion that such "planning", carefully thought out and boldly carried out, offered the best hope of escape from the present morass.

Nor did the speeches show any real diversity of view with regard to the part which the International Labour Organization can and should play in bringing this about. Economic conditions and social conditions, it was fully recognized, are so interwoven that the Organization is bound, as the custodian of the interests of social wellbeing, to neglect no step which is open to it in the direction of rehabilitation of industry and trade. As direct measures for the alleviation of present distress, attention was drawn to unemployment insurance, employment exchange schemes, migration, and the launching of public works. At the same time it was insisted that the Organization must issue a vigorous "call to action," and endeavour to stimulate the study and putting into operation of the more far-reaching measures for which the situation imperatively calls.

Once again, the importance of safeguarding the universality of the Organization, by giving due weight in its discussions and decisions to oversea countries and conditions as well as those of Europe, was stressed by many speakers. It was acknowledged by most of them that efforts had been made to meet past criticisms in this respect, and it was urged that further efforts should be made to give satisfaction to the desire of the extra-European countries for close collaboration with the Organization.

### The Director's Reply

Mr. Albert Thomas, Director of the International Labour Office, in replying to the discussion of his Annual Report, referred at the outset to the statement made by the President of the Governing Body at the opening of the Conference, that there was no crisis in the work of the International Labour Organization. Nevertheless, he said, the work of the Organization could not be isolated from the world-wide condition of economic depression, and whether the subject was reduction of hours, wages, emigration or any aspect of social legislation, one invariably found one's efforts impeded by the existing depression. There was, he again asserted, no crisis in the International Labour Organization, but a spiritual depression which went deep down and affected the whole of its activities.

The Director examined the record of ratifications of Conventions of the International Labour Conference within the past year and maintained that despite the extent of the economic depression, the progress of ratifications had not been slowed up in any marked degree. No need existed, therefore, for any marked degree. No need existed, therefore, for any particular uneasiness on that score. It had been stated in certain quarters that some of the Conventions lacked precision and were liable to misinterpretation. The Director asserted, however, that any uncertainties which had arisen were, after all, not very numerous and that there was no ground for complaint in that respect. Then again, the question had been raised if the Conventions adopted by the International Labour Conference were really of any benefit to the workers. This question had, however, arisen before and had been answered fully. Undoubtedly, various classes of workers had received improved conditions through the Conventions drawn up by the International Labour Conference and through the legislation which had been passed in different countries to bring these Conventions into effect.

Still another note of warning had been uttered. It had been said that the representation of different states in the Conference was decreasing. True, some countries had not sent complete delegations this year, but it should be remembered that this year's Conference was held a month earlier than usual and the fact that so many countries had sent delegations on this occasion, in spite of internal difficulties which might well have caused them to hesitate, did not suggest a condition of decline or lack of interest.

Reproach was cast against the Organization for being too European and for the inadequacy of representation of overseas countries. On this point, the Director mentioned that the Governing Body and the Office were both giving attention to this subject. The Governing Body was collaborating with the Office in regard to the desirability of a larger overseas staff, requests for stronger overseas representation on the Governing Body and on the committees, the appointment of correspondents and intensified propaganda.

In some quarters it had been suggested that social legislation was declining throughout the world. Enquiry on this subject made of the correspondents of the International Labour Office in different countries had shown, however, that social legislation was being well maintained and, in fact, remained almost intact. This fact that social legislation had maintained itself and was even developing, made him (the Director) feel that here again the International Labour Organization had accomplished something during the last twelve years. It had established social legislation, which previously had been in a precarious position in which it was liable to be affected by political and economic vicissitudes, as part of the life of the people and had given to it a vitality which persists even in a terrible crisis such as the present. Personally, he did not feel that within the limits of its activity the International Labour Organization had any need of seriously reproaching itself. Last year he had suggested that it should devote its energies first of all to its specific work and that even if it could only apply palliatives to unemployment, they should be applied to the fullest extent. That had been done and was still being done. An exact definition had been laid down as to the scope of the work to be undertaken by the International Labour Organization as follows: finding of employment, emigration, unemployment insurance, public works, reduction of hours of work, wages. In each one of these spheres, despite scepticism, despite that spirit of discouragement which is sometimes the bane of public administration, the work had been carried on.

The Director spoke of the part which he had himself taken in the promotion of public works for the relief of unemployment and the revival of economic activity. He also had laboured for the reduction of hours of work. Last year there had been some doubt whether the weekly period should be reduced to 44 hours or to 40 hours, but this year 40 hours was being suggested almost unanimously. The Governing Body and its Unemployment Committee had both affirmed with necessary

reservations the possibility of reducing hours of work to 40 per week in certain industries. The question was when would this problem be placed on the agenda of the Conference. It was not without significance that at the present moment economists, statesmen and even employers are gradually tending to the adoption of a forty-hour week which, in the words of the Governing Body, may be considered as most suitable, taking account, under present conditions, of the necessity of each unemployed worker, to whom it ensures an adequate wage, and the satisfactory working of businesses and the employment of the greatest possible number of workers.

With regard to the question of wages, it was impossible at present to tackle the wages problem from the point of view of international legislation at a time when the real value of the wage is dependent on the many economic difficulties with which the world is at present confronted.

"We must not," the Director asserted, "re-sign ourselves to a feeling of impotence. There is a task before us. The Treaty of Peace has confided to the Conference the task of founding world peace on social justice. In spite of man's inadequacy, in spite of the difficulties which the nationalist spirit may place in its way, this Conference must do its duty; indeed its obligations are all the stronger."

In drawing his remarks to a close, the Director declared that the search for profit had not shown itself capable of achieving for the mass of consumers and workers either a stability of employment or dignity of life. He maintained, therefore, that "planned economy" must be brought about along lines which have already been laid down by some of the great industrial trusts. "Just as when the nations were at war fifteen years ago, all production was brought under discipline for a single purpose, so to-day, for the satisfaction of the greatest number, that is to say, for the realization of those principles of justice which are inscribed in the Treaties of Peace, all the forces of production should be co-ordinated and placed under a definite guidance. There can be no hope for the world outside these principles, and this I think should be the guiding rule of the Organization...."

"During the last year, strengthened by the support of our Governing Body, we have tirelessly and fearlessly endeavoured on all occasions, in all the phases of international life, in all committees and commissions, to support any idea or any proposal likely to revive courage, stimulate hope, influence public opinion and bring the Governments to a decision. My colleagues and I are ready to continue this work with faith and courage, but what we now need is the unanimous and heartfelt support of the International Labour Conference in a firm determination unreservedly to implement the work of social justice. It is in this spirit of faith and confidence that we shall be able to prevent the mood of crisis and panic from obtaining a hold over the International Labour Organization and paralyzing its work. A crisis within the Organization is inconceivable unless there is faintness of heart.

"Let me conclude with the words of that great German whose centenary was recently celebrated by the whole of mankind. This was Goethe's advice, which is of significance for us and perhaps also for the Governments, Goethe said: 'Fortune against you? No! Saddle your horse and ride courageously.'"

### Closing Speeches

Senator the Hon. G. D. Robertson, Government delegate from Canada, who had acted as President of the Conference, in bringing the session to a close, said:—

"I feel that I should not be doing my duty if I did not call attention to the very remarkable spirit of conciliation and collaboration which has been shown by all the Groups and which has enabled us to have what I consider to be a very successful Conference.

"Many of us, when we came in this year of continued crisis to an International Labour Conference, must have wondered whether the general pressure would not have militated against our efforts being crowned with any sort of success. The contrary, however, has been the case: national adversity, it seems, has drawn us together internationally, and we have all felt that, in a year such as this, nothing should be allowed to hinder us from making our contribution to world recovery.

"I do not mean to say that our debates have been wanting in interest, or that varying points of view have not been worthily and energetically defended. But even when Delegates thought it incumbent upon them to give the strongest expression to their convictions, one felt that they were yet conscious of the need for compromise and endeavour to obtain a satisfactory result.

"In this connection, I am confident that the adoption of the Dockers Convention marks a most interesting step in the history of this Organization. This is the first time that a Convention has been revised by the Conference, and I am most happy that this revision has been accomplished, and that the new Convention is a more efficient and applicable instrument than the one which it replaces....."

"It is not, of course, necessary to focus world opinion upon the present crisis. The world is only too painfully aware of the state in which it is at present. It is to be hoped, however, that our deliberations may have been of service in drawing attention to possible remedies, in underlining the international causes of the crisis, and the need for international solutions."

The President thanked the three Vice-Presidents of the Conference for their assistance, and regretted that the state of his health had compelled him to call on them more than would otherwise have been the case. He thanked also the staff of the International Labour Office, whose international technique improves from year to year and through whose unflagging assistance this Conference could not have been possible.

The three Vice-presidents of the Conference also spoke briefly, congratulating the President on the success of his work and ex-

pressing their hope for the complete recovery of his health. Mr. Hammarskjöld, Government delegate from Sweden, one of the Vice-presidents, observed:—

"We are all agreed in holding that this year the work of the Conference and its various committees has been carried on under the best possible conditions. There has been a marked concentration on reality and avoidance of useless formal discussions. If the work has been so well carried out, despite the fact that the time for preparing the Conference has been six weeks shorter than usual, it is mainly due to the marvellous work accomplished before and during the Conference by the Secretariat and by the International Labour Office."

Mr. Schmidt, Government delegate from Austria, another of the Vice-presidents, expressed regret that the Sixteenth Session had not been held in Vienna as had been proposed and the hope that one of the future conferences may yet be held in that city.

Mr. Kupers, Workers' delegate from the Netherlands, who was also one of the Vice-presidents of the Conference, pointed out that one of the successes of the present Conference was that it had secured for the first time the revision of an existing Convention, with the approval of the Government representatives and of the Employers' and Workers' delegates in attendance.

"A second point of importance," he said, "which has particularly impressed me at this Conference, is the general spirit of collaboration which has prevailed throughout its duration. With a short interval I have attended the International Labour Conferences during the last ten years. At most of them Workers' and Employers' representatives have almost always been diametrically opposed to one another, whatever the subject under discussion. That such an attitude does not further the interests of the International Labour Organization is quite comprehensible. At this Conference, for the first time, I have noted with pleasure that a different atmosphere has prevailed.

\* \* \*

"In the sphere of social politics, fruitful collaboration between employers and workers has proved to be possible, and this Conference may be proud of its achievements through its spirit of collaboration. But, after all, what is the use of the most perfect Convention for dockers when there is nothing to be loaded or unloaded from ships? What can avail the most complete system of employment agencies when there are no places to be found for the millions of toilers who have their names inscribed in the registers of the employment offices? The world is suffering from a grave disease; many doctors stand around the patient's bed, but they cannot, or they dare not or will not, apply the remedy which will cure the ill. Even so-called great men whose names enjoy world-wide renown in finance and economic life have failed. Some of them have even proved to be little more than charlatans, adventurers and criminals.

"The workers' movement indicated years ago ways and means which might lead to better

conditions, to better relations between the peoples of the world. These proposals, however, have not been adopted and the consequence has been that economic life has reached an impasse. Economic planning on an international scale, for production purposes as well as for distribution has become an imperative necessity. Economic democracy must be established in order that a new form of society may be constructed in which, in the first place, due regard is paid to the interests of the community as a whole."

Mr. Albert Thomas, Director of the International Labour Office, in a brief speech (the last which he delivered in connection with the work of the Conference, as his death occurred with tragic suddenness a few days later) expressed his thanks to the President, stating that although Senator Robertson had been compelled, owing to his state of health, to absent himself from a number of the sittings, he had by an effort of will managed to be present at all times when the work of the Conference required the presence of its presiding officer. He expressed also his hope that the President might be able to continue in the future, as for many years past, to collaborate in the international work for social justice.

"We had," he said, "certain apprehensions about the present Conference. It took place earlier this year and the work had to be done more rapidly than is generally the case. We also wondered to what extent the states would be represented. We nevertheless overcame these difficulties and we have overcome yet another one. The Disarmament Conference has been meeting at the same time as ours. That naturally interfered a little with the publicity which our work received. Yet we welcome that loss of publicity because of what caused it. We were all convinced that the work which was being done at the Disarmament Conference would greatly assist our own work, and that the spirit of disarmament and the confidence which it inspired would promote the future success of our labours. We have built stout ships, and we hope that a favourable wind will blow from the other side of the lake and fill their sails. It is because we realize how closely social questions are linked up with disarmament questions that we so warmly welcome the Disarmament Conference.

\* \* \*

Undoubtedly the session has been a great success but I have sometimes wondered whether the development of our machinery has not been such that we might be forced to go too fast. However that may be, this is undoubtedly a point which we shall have to watch carefully in the future. We must not be led away by the facility of our discussions.

\* \* \*

What we can hope for, as I have so often pointed out, is that it may be possible for us to maintain our good will, our sense of social progress, and our faith in the ideals of justice and peace, and to keep these ideals sure, intense and lively in all possible circumstances, so that they may be the dominating factors in our organization."

Mr. H. B. Butler, Deputy Director of the International Labour Office, said:

"I think that the spirit of collaboration which has been referred to by the previous speakers was a feature of this Conference and was perhaps more marked than at any previous conference since Washington.

\* \* \*

"Perhaps, in conclusion, I may just mention the two outstanding impressions which have been left on my mind from those debates and those conversations.

"The first is a negative impression. Everyone seemed to realize that the unemployment from which we are now suffering is not merely an industrial disease, not merely a temporary disequilibrium between the supply of and demand for industrial products which can be adjusted by industry itself. We are suffering from something much graver and much deeper, a disease which has spread through the whole economic system, which has smitten not one nor even a few nations, but every nation without exception. This is not just another cyclical depression; it is a crisis in the world's economic evolution. It is not just an accident that unemployment is prevalent in every country simultaneously, but the fact is symptomatic of the character and the extent of the disease. It means that in its origin and nature it is not national but international.

"The second impression I got was that, running through all the speeches that have been delivered here was the feeling that, though great efforts were being made nationally—drastic efforts, laudable efforts, necessary efforts—yet none of them were going to succeed by themselves in bringing about recovery, because the scope of their application was of necessity too limited. It is true that this Conference by itself is not in a position to find or to apply the international remedies which have been discussed, but I cannot help feeling that the debates which have taken place here in this Conference, which, after all, represents those who are engaged in industry, those who live by industry, and those who have to think about the economic development of their own countries, are a valuable contribution to creating that public opinion without which no remedy can be applied to the evils from which we are at present suffering."

The Right Hon. Arthur Henderson, President of the Disarmament Conference, which was in session in Geneva at the time, delivered a brief address in the course of which he said:—

"We are, as we have heard just now, undergoing a very great trial, owing to the tremendous world slump through which all the great industrial countries—in fact all the countries—

are passing at this stage; and I sometimes fear that a phrase that cropped up very much towards the end of the War and at the time of the setting up of the Versailles Treaty—the phrase 'self-determination'—might be applied economically. In recent years we have had too much economic self-determination, and we have got to treat our economic problems from an international rather than from a narrow national standpoint.

"Then there is a final reason why I am delighted to be here. Your Secretary General made a reference to the close association between the work of this Conference and the work of the Conference over which I have the honour to preside, and with the interests of which I am daily very profoundly concerned. We have gathered together, as you know, the representatives of over 60 countries in connection with the great problem of disarmament, and I feel convinced that your Secretary General was right when he said that the more we succeed in the work we are attempting to do in connection with the problem of disarmament, the more freedom will there be for the International Labour Organization to carry on the work that it is endeavouring to do, and to bring about the reforms, social and economic, that it concentrates upon from time to time.

"May I say this before I resume my seat? There is a feeling that our Conference, that is, the Disarmament Conference, is going very slowly. I admit that it is going very slowly; but my experience of international conferences justifies me in saying you can go fast in an international conference, and you break. We do not want to break in connection with the Disarmament Conference; we want to bring about practical success. And the public throughout the world—and I have the best indication of that from my postbag every day—the public throughout the world is more behind the Disarmament Conference than has been the case with any Conference that I remember in a public life now extending for 40 years. And it would be well-nigh impossible for a conference backed up by public opinion as the Disarmament Conference is to be other than a success. We may not achieve the 100 per cent success upon which we have set our hearts, for I have always regarded this Conference as a first stage, but I shall be bitterly disappointed if from this first stage we do not get a substantial contribution to the whole problem of disarmament, and especially if we do not make an emphatic decision with regard to those weapons that are particularly aggressive and have them finally prohibited by every nation throughout the world."

Full texts of the Draft Conventions, Recommendations and Resolutions adopted by the Conference are as follows:—

#### DRAFT CONVENTION CONCERNING THE AGE FOR ADMISSION OF CHILDREN TO NON-INDUSTRIAL EMPLOYMENT.

The General Conference of the International Labour Organisation of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Sixteenth Session on 12 April 1932, and

Having been convened at Geneva by certain proposals with regard to the age for admis-

sion of children to employment in non-industrial occupations, which is the third item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,  
adopts, this thirtieth day of April of the year one thousand nine hundred and thirty-two the

following Draft Convention for ratification by the Members of the International Labour Organisation, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

#### Article 1

(1) This Convention shall apply to any employment not dealt with in the following Conventions adopted by the International Labour Conference at its first, Second and Third Sessions respectively:

Convention fixing the minimum age for admission of children to industrial employment (Washington, 1919);

Convention fixing the minimum age for admission of children to employment at sea (Genoa, 1920);

Convention concerning the age for admission of children to employment in agriculture (Geneva, 1921).

The competent authority in each country shall, after consultation with the principal organizations of employers and workers concerned, define the line of division which separates the employments covered by this Convention from those dealt with in the three aforesaid Conventions.

(2) This Convention shall not apply to:

(a) employment in sea-fishing;

(b) work done in technical and professional schools, provided that such work is essentially of an educative character, is not intended for commercial profit, and is restricted, approved and supervised by public authority.

(3) It shall be open to the competent authority in each country to exempt from the application of this Convention:

(a) employment in establishments in which only members of the employer's family are employed, except employment which is harmful, prejudicial or dangerous within the meaning of Articles 3 and 5 of this Convention

(b) domestic work in the family performed by members of that family.

#### Article 2

Children under fourteen years of age, or children over fourteen years who are still required by national laws or regulations to attend primary school, shall not be employed in any employment to which this Convention applies except as hereinafter otherwise provided.

#### Article 3

(1) Children over twelve years of age may, outside the hours fixed for school attendance, be employed on light work:

(a) which is not harmful to their health or normal development;

(b) which is not such as to prejudice their attendance at school or their capacity to benefit from the instruction there given; and

(c) the duration of which does not exceed two hours per day on either school days or holidays, the total number of hours spent at school and on light work in no case to exceed seven per day.

(2) Light work shall be prohibited:

(a) on Sundays and legal public holidays;

(b) during the night, that is to say, during a period of at least twelve consecutive hours comprising the interval between 8 p.m. and 8 a.m.

(3) After the principal organizations of employers and workers concerned have been consulted, national laws or regulations shall:

(a) specify what forms of employment may be considered to be light work for the purpose of this Article;

(b) prescribe the preliminary conditions to be complied with as safeguards before children may be employed in light work.

(4) Subject to the provisions of sub-paragraph (a) or paragraph (1) above.

(a) national laws or regulations may determine work to be allowed and the number of hours per day to be worked during the holiday time of children referred to in Article 2 who are over fourteen years of age;

(b) in countries where no provision exists relating to compulsory school attendance, the time spent on light work shall not exceed four and a half hours per day.

#### Article 4

In the interests of art, science or education, national laws or regulations may, by permits granted in individual cases, allow exceptions to the provisions of Articles 2 and 3 of this Convention in order to enable children to appear in any public entertainment or as actors or supernumeraries in the making of cinematographic films;

Provided that:

(a) no such exception shall be allowed in respect of employment which is dangerous within the meaning of Article 5, such as employment in circuses, variety shows or cabarets;

(b) strict safeguards shall be prescribed for the health, physical development and morals of the children, for ensuring kind treatment of them, adequate rest, and the continuation of their education;

(c) children to whom permits are granted in accordance with this Article shall not be employed after midnight.

#### Article 5

A higher age or ages than those referred to in Article 2 of this Convention shall be fixed by national laws or regulations for admission of young persons and adolescents to any employment which, by its nature, or the circumstances in which it is to be carried on, is dangerous to the life, health or morals of the persons employed in it.

#### Article 6

A higher age or ages than those referred to in Article 2 of this Convention shall be fixed by national laws or regulations for admission of young persons and adolescents to employment for purposes of itinerant trading in the streets or in places to which the public have access, to regular employment at stalls outside shops or to employment in itinerant occupations in cases where the conditions of such employment require that a higher age should be fixed.

#### Article 7

In order to ensure the due enforcement of the provisions of this Convention, national laws or regulations shall:

(a) provide for an adequate system of public inspection and supervision;

(b) provide suitable means for facilitating the identification and supervision of persons

under a specified age engaged in the employments and occupations covered by Article 6;

(c) provide penalties for breaches of the laws or regulations by which effect is given to the provisions of this Convention.

#### Article 8

There shall be included in the annual reports to be submitted under Article 408 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace full information concerning all laws and regulations by which effect is given to the provisions of this Convention, including:

(a) a list of the forms of employment which national laws or regulations specify to be light work for the purpose of Article 3;

(b) a list of the forms of employment for which in accordance with Articles 5 and 6, national laws or regulations have fixed ages for admission higher than those laid down in Article 2;

(c) full information concerning the circumstances in which exceptions to the provisions of Articles 2 and 3 are permitted in accordance with the provisions of Article 4.

#### Article 9.

The provisions of Articles 3, 4, 5 and 7 of this Convention shall not apply to India.

But in India:

(1) the employment of children under ten shall be prohibited

(a) in shops, offices, hotels, restaurants and places for the sale of drink;

(b) in places of public entertainment;

(c) in street trading;

(d) in any other non-industrial employment to which the provisions of this paragraph may be extended by the competent authority.

Provided that in the interests of art, science or education, national laws or regulations may by permits granted in individual cases allow exceptions to the above provisions in order to enable children to appear on the stage, in cinematographic films and in other public entertainments.

The minimum age prescribed under this Article shall not be less than that laid down in national laws or regulations as the minimum age for the admission of children into factories not using power, and which are not subject to the provisions of the Indian Factories Act.

(2) Persons under fourteen years of age shall not be employed in any non-industrial employment which the competent authority, after consultation with the principal organizations of employers and workers, may declare to involve danger to life, health or morals.

(3) National laws or regulations shall provide for the due enforcement of the provisions of this Article and in particular shall provide penalties for breaches of the laws or regulations by which effect is given to the provisions of this Article.

(4) The competent authority shall, after a period of five years from the date of passing of legislation giving effect to the provisions of this Convention, review the whole position with a view to increasing the minimum ages prescribed in this Convention, such review to cover the whole of the provisions of this Article.

#### Article 10.

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corre-

sponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

#### Article 11

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 12

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### Article 13

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

#### Article 14

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 15

Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention shall *ipso jure* involve denunciation of this Convention without any requirement of delay, notwithstanding the provisions of Article 13 above, if and when the new revising Convention shall have come into force.

As from the date of the coming into force of the new revising Convention, the present Convention shall cease to be open to ratification by the Members.

Nevertheless, this Convention shall remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 16

The French and English texts of this Convention shall both be authentic.

## RECOMMENDATION CONCERNING THE AGE FOR ADMISSION OF CHILDREN TO NON-INDUSTRIAL EMPLOYMENT.

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Sixteenth Session on 12th April, 1932, and

Having decided upon the adoption of certain proposals with regard to the age of admission of children to employment in non-industrial occupations, which is the third item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation, adopts, this thirtieth day of April of the year one thousand nine hundred and thirty-two, the following Recommendation, to be submitted to the Members of the International Labour Organisation for consideration, with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

The Conference,

Having adopted a Draft Convention concerning the age for admission of children to non-industrial employment, with a view to completing the international regulations laid down by these three Conventions adopted at previous Sessions concerning the age for admission of children to industrial employment, employment at sea and employment in agriculture; and

Desiring to ensure as uniform application as possible of the new Draft Convention, which leaves certain details of application to national laws or regulations;

Considers that, in spite of the variety of employments covered by the Draft Convention and the need of making allowance for the adoption of practical methods of application varying with the climate, customs, national tradition and other conditions peculiar to individual countries, account should be taken of certain methods which have been found to give satisfactory results, and which may accordingly be a guide to the Members of the Organization,

The Conference therefore recommends the Members to take the following rules and methods into consideration:

### *I. Light work*

(1) In order that children may derive full benefit from their education and that their physical, intellectual and moral development may be safeguarded, it is desirable that so long as they are required to attend school their employment should be restricted to as great an extent as possible.

(2) In determining the categories of employment in light work to which children may be admitted outside the hours of school attendance, such occupations and employments as running errands, distribution of newspapers, odd jobs in connection with the practice of sport or the playing of games, and picking and selling flowers or fruits might be taken into consideration.

(3) For the admission of children to employment in light work the competent authorities should require the consent of parents or guardians, a medical certificate of physical fitness for the employment contemplated, and, where neces-

sary, previous consultation with the school authorities.

(4) The limitations on the hours of work per day of children employed in light work outside school hours should be adapted to the school time-table on the one hand, and to the age of the child on the other. Where instruction is given both in the morning and in the afternoon, the child should be ensured a sufficient rest before morning school, in the interval between morning and afternoon school, and immediately after the latter.

### *II. Employment in Public Entertainments*

(5) Employment in any public entertainment, or as actors or supernumeraries in the making of cinematographic films, should in principle, be prohibited for children under twelve years of age, and exceptions to this rule should be kept within the narrowest limits and only allowed in so far as the interests of art, science or education may require.

The permits to be granted by the competent authorities in individual cases should only be issued if the competent authorities are satisfied as to the nature and the particular type of the employment contemplated, if the parents' or guardians' consent has been obtained, and if the physical fitness of the child for the employment has been established. In the case of cinematographic films, measures should be taken to insure that the children employed shall be under the supervision of a medical eye specialist. The child should also be assured of receiving good treatment and of being able to continue his education.

Each permit should specify the number of hours during which the child may be employed, with special regard to night work and work on Sundays and legal public holidays. It should be delivered for a particular entertainment, or for a limited period, and may be renewed.

### *III. Dangerous Employments*

(6) The competent authorities should consult the principal organizations of employers and workers concerned before determining the employments which are dangerous to the life, health or morals of the persons employed, and before fixing the higher age or ages of admission to be prescribed for such employments by national laws or regulations.

Among employments of the kind referred to might be included, for example, certain employments in public entertainments such as acrobatic performances; in establishments for the cure of the sick such as employment involving danger of contagion or infection; and in establishments for the sale of alcoholic liquor such as serving customers.

Different ages for particular employments should be fixed in relation to their special dangers and in some cases the age required for girls might be higher than the age for boys.

### *IV. Prohibition of Employment of Children by Certain Persons*

(7) With a view to safeguarding the moral interests of children persons who have been condemned for certain serious offences or who are notorious drunkards should be prohibited

from employing children other than their own, even if such children live in the same household with these persons.

### V. Enforcement

(8) In order to facilitate the enforcement of the provisions of the Draft Convention, it is desirable to institute a public system of registration and of employment or identity books for children admitted to employment.

These documents should contain, in particular, indications of the age of the child, the nature of his employment, the number of hours of work authorized, and the dates when the child began and finished his employment.

In the case of street trading the wearing of special badges should be prescribed.

In the case of children employed in public entertainments, supervising or inspecting officials should have the right of access to premises in which such entertainments are prepared or performed.

## DRAFT CONVENTION CONCERNING THE PROTECTION AGAINST ACCIDENTS OF WORKERS EMPLOYED IN LOADING OR UNLOADING SHIPS.

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Sixteenth Session on April 12, 1932, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention concerning the protection against accidents of workers employed in loading or unloading ships adopted by the Conference at its Twelfth Session, which is the fourth item on the Agenda of the Session, and

Considering that these proposals must take the form of a Draft International Convention, adopts this twenty-eighth day of April of the year one thousand nine hundred and thirty-two, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

### Article 1

For the purpose of this Convention:

(1) the term "processes" means and includes all or any part of the work performed on shore or on board ship of loading or unloading any ship whether engaged in maritime or inland navigation, excluding ships of war, in, on, or at any maritime or inland port, harbour, dock, wharf, quay or similar place at which such work is carried on; and

(2) the term "worker" means any person employed in the processes.

### Article 2

Any regular approach over a dock, wharf, quay or similar premises which workers have to use for going to or from a working place at which the processes are carried on and every such working place on the shore shall be maintained with due regard to the safety of the workers using them.

In particular,

(1) every said working place on shore and any dangerous parts of any said approach thereto from the nearest highway shall be safely and efficiently lighted;

(2) wharves and quays shall be kept sufficiently clear of goods to maintain a clear passage to the means of access referred to in Article 3;

(3) where any space is left along the edge of any wharf or quay, it shall be at least 3 feet (90 cm.) wide and clear of all obstruction other than fixed structures, plant and appliances in use; and

(4) so far as is practicable having regard to the traffic and working,

(a) all dangerous parts of the said approaches and working places (e.g. dangerous breaks, corners and edges) shall be adequately fenced to a height of not less than 2 feet 6 inches (75 cm.);

(b) dangerous footways over bridges, caissons and dock gates shall be fenced to a height of not less than 2 feet 6 inches (75 cm.) on each side, and the said fencing shall be continued at both ends to a sufficient distance which shall not be required to exceed 5 yards (4 m. 50).

(5) The measurement requirements of paragraph (4) of this Article shall be deemed to be complied with in respect of appliances in use at the date of the ratification of this Convention, if the actual measurements are not more than 10 per cent less than the measurements specified in the said paragraph (4).

### Article 3

(1) When a ship is lying alongside a quay or some other vessel for the purpose of the processes, there shall be safe means of access for the use of the workers at such times as they have to pass to or from the ship, unless the conditions are such that they would not be exposed to undue risk if no special appliance were provided.

(2) The said means of access shall be:

(a) where reasonably practicable, the ship's accommodation ladder, a gangway or a similar construction;

(b) in other cases a ladder.

(3) The appliances specified in paragraph (2) (a) of this Article shall be at least 22 inches (55cm.) wide, properly secured to prevent their displacement, not inclined at too steep an angle, constructed of materials of good quality and in good condition, and securely fenced throughout to a clear height or not less than 2 feet 9 inches (82cm.) on both sides, or in the case of the ship's accommodation ladder securely fenced to the same height on one side, provided that the other side is properly protected by the ship's side.

Provided that any appliances as aforesaid in use at the date of the ratification of this Convention shall be allowed to remain in use:

(a) until the fencing is renewed if they are fenced on both sides to a clear height of at least 2 feet 8 inches (80cm.);

(b) for two years from the date of ratification if they are fenced on both

sides to a clear height of at least 2 feet 6 inches (75cm.).

(4) The ladders specified in paragraph (2) (b) of this Article shall be of adequate length and strength, and properly secured.

(5) (a) Exceptions to the provisions of this Article may be allowed by the competent authorities when they are satisfied that the appliances specified in the Article are not required for the safety of the workers.

(b) the provisions of this Article shall not apply to cargo stages or cargo gangways when exclusively used for the processes.

(6) Workers shall not use, or be required to use, any other means of access than the means specified or allowed by this Article.

#### Article 4

When the workers have to proceed to or from a ship by water for the processes, appropriate measures shall be prescribed to ensure their safe transport, including the conditions to be complied with by the vessels used for this purpose.

#### Article 5

(1) When the workers have to carry on the processes in a hold the depth of which from the level of the deck to the bottom of the hold exceeds 5 feet (1 m. 50), there shall be safe means of access from the deck to the hold for their use.

(2) The said means of access shall ordinarily be by ladder, which shall not be deemed to be safe unless it complies with the following conditions:

(a) provides foothold of a depth, including any space behind the ladder, of not less than 4½ inches (11½ cm.) for a width of not less than 10 inches (25 cm.) and a firm handhold;

(b) is not recessed under the deck more than is reasonably necessary to keep it clear of the hatchway;

(c) is continued by and is in line with arrangements for secure handhold and foothold on the coamings (e.g. Cleats or or cups);

(d) the said arrangements on the coamings provide foothold of a depth, including any space behind the said arrangements, of not less than 4½ inches (11½ cm.) for a width of not less than 10 inches (25 cm.);

(e) if separate ladders are provided between the lower decks, the said ladders are as far as practicable in line with the ladder from the top deck.

Where, however, owing to the construction of the ship, the provision of a ladder would not be reasonably practicable, it shall be open to the competent authorities to allow other means of access, provided that they comply with the conditions laid down in this Article for ladders so far as they are applicable.

In the case of ships existing at the date of the ratification of this Convention the measurement requirements of sub-paragraph (a) and (d) of this paragraph shall be deemed to be complied with until the ladders and arrangements are replaced, if the actual measurements are not more than 10 per cent less than the measurements specified in the said sub-paragraphs (a) and (d).

(3) Sufficient free passage to the means of access shall be left at the coamings.

(4) Shaft tunnels shall be equipped with adequate handhold and foothold on both sides.

(5) When a ladder is to be used in the hold of a vessel which is not decked it shall be the duty of the contractor undertaking the processes to provide such ladder. It shall be equipped at the top with hooks or with other means for firmly securing it.

(6) The workers shall not use, or be required to use, other means of access than the means specified or allowed by this Article.

(7) Ships existing at the date of ratification of this Convention shall be exempt from compliance with the measurements in paragraph (2) (a) and (d) and from the provisions of paragraph (4) of this Article for a period not exceeding four years from the date of ratification of this Convention.

#### Article 6

(1) While the workers are on a ship for the purpose of the processes, every hatchway of a cargo hold accessible to the workers which exceeds 5 feet (1 m. 50) in depth from the level of the deck to the bottom of the hold, and which is not protected to a clear height of 2 feet 6 inches (75 cm.) by the coamings, shall, when not in use for the passage of goods, coal or other material, either be securely fenced to a height of 3 feet (90 cm.) or be securely covered. National laws or regulations shall determine whether the requirements of this Article shall be enforced during meal times and other short interruptions of work.

(2) Similar measures shall be taken when necessary to protect all other openings in a deck which might be dangerous to the workers.

#### Article 7

When the processes have to be carried on on a ship, the means of access thereto and all places on board at which the workers are employed or to which they may be required to proceed in the course of their employment shall be efficiently lighted.

The means of lighting shall be such as not to endanger the safety of the workers nor to interfere with the navigation of other vessels.

#### Article 8

In order to ensure the safety of the workers when engaged in removing or replacing hatch coverings and beams used for hatch coverings,

(1) hatch coverings and beams used for hatch coverings shall be maintained in good condition;

(2) hatch coverings shall be fitted with adequate handgrips, having regard to their size and weight, unless the construction of the hatch or the hatch coverings is of a character rendering the provision of handgrips unnecessary;

(3) beams used for hatch coverings shall have suitable gear for removing and replacing them of such a character as to render it unnecessary for workers to go upon them for the purpose of adjusting such gear;

(4) all hatch coverings and fore and aft and thwartship beams shall, in so far as they are not interchangeable, be kept plainly marked to indicate the deck and hatch to which they belong and their position therein;

(5) hatch coverings shall not be used in the construction of cargo stages or for any other purpose which may expose them to damage.

#### Article 9

Appropriate measures shall be prescribed to ensure that no hoisting machine, or gear, whether fixed or loose, used in connection therewith, is employed in the processes on shore or on board ship unless it is in a safe working condition.

In particular,

(1) before being taken into use, the said machines, fixed gear on board ship accessory thereto as defined by national laws or regulations, and chains and wire ropes used in connection therewith, shall be adequately examined and tested, and the safe working load thereof certified, in the manner prescribed and by a competent person acceptable to the national authorities;

(2) after being taken into use, every hoisting machine, whether used on shore or on board ship, and all fixed gear on board ship accessory thereto as defined by national laws or regulations shall be thoroughly examined or inspected as follows:

(a) to be thoroughly examined every four years and inspected every twelve months: derricks, goose necks, mast bands, derrick bands, eyebolts, spans and any other fixed gear the dismantling of which is specially difficult;

(b) to be thoroughly examined every twelve months: all hoisting machines (e.g. cranes, winches), blocks, shackles and all other accessory gear not included in (a).

All loose gear (e.g. chains, wire ropes, rings, hooks) shall be inspected on each occasion before use unless they have been inspected within the previous three months.

Chains shall not be shortened by tying knots in them and precautions shall be taken to prevent injury to them from sharp edges.

A thimble or loop splice made in any wire rope shall have at least three tucks with a whole strand of rope and two tucks with one half of the wires cut out of each strand provided that this requirement shall not operate to prevent the use of another form of splice which can be shown to be as efficient as the form hereby prescribed.

(3) Chains and such similar gear as is specified by national laws or regulations (e.g. hooks, rings, shackles, swivels) shall, unless they have been subjected to such other sufficient treatment as may be prescribed by national laws or regulations, be annealed as follows under the supervision of a competent person acceptable to the national authorities:

(a) In the case of chains and the said gear carried on board ship:

(i) half inch (12½ cm.) and smaller chains or gear in general use once at least in every six months;

(ii) all other chains or gear (including span chains excluding bridle chains attached to derricks or masts) in general use once at least in every twelve months;

Provided that in the case of such gear used solely on cranes and other hoisting appliances worked by hand, twelve months shall be substituted for six months in sub-paragraph (i) and two years for twelve months in sub-paragraph (ii);

Provided also that, if the competent authority is of opinion that owing to the size, design,

material or infrequency of use of any of the said gear the requirements of this paragraph as to annealing are not necessary for the protection of the workers, it may, by certificate in writing (which it may at its discretion revoke) exempt such gear from the said requirements subject to such conditions as may be specified in the said certificate.

(b) In the case of chains and the said gear not carried on board ship:

Measures shall be prescribed to secure the annealing of the said chains and gear.

(c) In the case of the said chains and gear whether carried on board ship or not, which have been lengthened, altered or repaired by welding, they shall thereupon be tested and re-examined.

(4) Such duly authenticated records as will provide sufficient *prima facie* evidence of the safe condition of the machines and gear concerned shall be kept, on shore or on the ship as the case may be, specifying the safe working load and the dates and results of the tests and examinations referred to in paragraphs (1) and (2) of this Article and of the annealings or other treatment referred to in paragraph (3).

Such records shall, on the application of any person authorized for the purpose, be produced by the person in charge thereof.

(5) The safe working load shall be kept plainly marked on all cranes, derricks and chain slings and on any similar hoisting gear used on board ship as specified by national laws or regulations. The safe working load marked on chain slings shall either be in plain figures or letters upon the chains or upon a tablet or ring of durable material attached securely thereto.

(6) All motors, cogwheels, chain and friction gearing, shafting, live electric conductors and steam pipes shall (unless it can be shown that by their position and construction they are equally safe to every worker employed as they would be if securely fenced) be securely fenced so far as is practicable without impeding the safe working of the ship.

(7) Cranes and winches shall be provided with such means as will reduce to a minimum the risk of the accidental descent of a load while in process of being lifted or lowered.

(8) Appropriate measures shall be taken to prevent exhaust steam from and, so far as practicable, live steam to any crane or winch obscuring any part of the working place at which a worker is employed.

(9) Appropriate measures shall be taken to prevent the foot of a derrick being accidentally lifted out of its socket or support.

#### Article 10

Only sufficiently competent and reliable persons shall be employed to operate lifting or transporting machinery whether driven by mechanical power or otherwise, or to signal to a driver of such machinery, or to attend to cargo, falls on winch ends or winch drums.

#### Article 11

(1) No load shall be left suspended from any hoisting machine unless there is a competent person actually in charge of the machine while the load is so left.

(2) Appropriate measures shall be prescribed to provide for the employment of a signaller

where this is necessary for the safety of the workers.

(3) Appropriate measures shall be prescribed with the object of preventing dangerous methods of working in the stacking, unstacking, stowing and unstowing of cargo, or handing in connection therewith.

(4) Before work is begun at a hatch the beams thereof shall either be removed or be securely fastened to prevent their displacement.

(5) Precautions shall be taken to facilitate the escape of the workers when employed in a hold or on 'tween decks in dealing with coal or other bulk cargo.

(6) No stage shall be used in the processes unless it is substantially and firmly constructed, adequately supported and where necessary securely fastened.

No truck shall be used for carrying cargo between ship and shore on a stage so steep as to be unsafe.

Stages shall where necessary be treated with suitable material to prevent the workers slipping.

(7) When the working space in a hold is confined to the square of the hatch, and except for the purpose of breaking out or making up slings,

(a) hooks shall not be made fast in the bands or fastenings of bales of cotton, wool, cork, gunny-bags, or other similar goods;

(b) can-hooks shall not be used for raising or lowering a barrel when, owing to the construction or condition of the barrel or of the hooks, their use is likely to be unsafe.

(8) No gear of any description shall be loaded beyond the safe working load save in exceptional cases and then only in so far as may be allowed by national laws or regulations.

(9) In the case of shore cranes with varying capacity (e.g. raising and lowering jib with load capacity varying according to the angle) an automatic indicator or a table showing the safe working loads at the corresponding inclinations of the jib shall be provided on the crane.

#### Article 12

National laws or regulations shall prescribe such precautions as may be deemed necessary to ensure the proper protection of the workers, having regard to the circumstances of each case, when they have to deal with or work in proximity to goods which are in themselves dangerous to life or health by reason either of their inherent nature or of their condition at the time, or work where such goods have been stowed.

#### Article 13

At docks, wharves, quays and similar places which are in frequent use for the processes, such facilities as having regard to local circumstances shall be prescribed by national laws or regulations shall be available for rapidly securing the rendering of first-aid and in serious cases of accident removal to the nearest place of treatment. Sufficient supplies of first-aid equipment shall be kept permanently on the premises in such a condition and in such positions as to be fit and readily accessible for immediate use during working hours. The said

supplies shall be in charge of a responsible person or persons, who shall include one or more persons competent to render first-aid, and whose services shall also be readily available during working hours.

At such docks, wharves, quays and similar places as aforesaid appropriate provision shall also be made for the rescue of immersed workers from drowning.

#### Article 14.

Any fencing, gangway, gear, ladder, life-saving means or appliance, light, mark, stage or other thing whatsoever required to be provided under this Convention shall not be removed or interfered with by any person except when duly authorized or in case of necessity, and if removed shall be restored at the end of the period for which its removal was necessary.

#### Article 15.

It shall be open to each Member to grant exemptions from or exceptions to the provisions of this Convention in respect of any dock, wharf, quay or similar place at which the processes are only occasionally carried on or the traffic is small and confined to small ships, or in respect of certain special ships or special classes of ships or ships below a certain small tonnage, or in cases where as a result of climatic conditions it would be impracticable to require the provisions of this Convention to be carried out.

The International Labour Office shall be kept informed of the provisions in virtue of which any exemptions and exceptions as aforesaid are allowed.

#### Article 16.

Except as herein otherwise provided, the provisions of this Convention which affect the construction or permanent equipment of the ship shall apply to ships the building of which is commenced after the date of ratification of the Convention, and to all other ships within four years after that date, provided that in the meantime the said provision shall be applied so far as reasonable and practicable to such other ships.

#### Article 17.

In order to ensure the due enforcement of any regulations prescribed for the protection of the workers against accidents,

(1) The regulations shall clearly define the persons or bodies who are to be responsible for compliance with the respective regulations;

(2) Provision shall be made for an efficient system of inspection and for penalties for breaches of the regulations;

(3) Copies or summaries of the regulations shall be posted up in prominent positions at docks, wharves, quays and similar places which are in frequent use for the processes.

#### Article 18.

Each Member undertakes to enter into reciprocal arrangements on the basis of this Convention with the other Members which have ratified this Convention, including more particularly the mutual recognition of the arrangements made in their respective countries for testing, examining and annealing and of certificates and records relating thereto;

Provided that as regards the construction of ships and as regards plant used on ships and the records and other matters to be observed

on board under the terms of this Convention, each Member is satisfied that the arrangements adopted by the other Member secure a general standard of safety for the workers equally effective as the standard required under its own laws and regulations;

Provided also that the Governments shall have due regard to the obligations of paragraph (11) of Article 405 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

#### Article 19.

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

#### Article 20.

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 21.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### Article 22

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention

first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

#### Article 23

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 24

Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention shall *ipso jure* involve denunciation of this Convention without any requirement of delay, notwithstanding the provisions of Article 22 above, if and when the new revising Convention shall have come into force.

As from the date of the coming into force of the new revising Convention, the present Convention shall cease to be open to ratification by the Members.

Nevertheless, this Convention shall remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 25

The French and English texts of this Convention shall both be authentic.

### RECOMMENDATION FOR EXPEDITING RECIPROCITY AS PROVIDED FOR IN THE CONVENTION ADOPTED IN 1932 CONCERNING THE PROTECTION AGAINST ACCIDENTS OF WORKERS EMPLOYED IN LOADING OR UNLOADING SHIPS, SUBMITTED BY THE DRAFTING COMMITTEE.

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Sixteenth Session on 12 April, 1932, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention, adopted in 1929, concerning the protection against accidents of workers employed in loading or unloading ships, which is the fourth item of the Agenda of the Session, and

Having adopted a Draft Convention revising the said Convention and having decided to supplement the revised Convention by a Recommendation,

adopts this twenty-eighth day of April of the year one thousand nine hundred and thirty-two

the following Recommendation to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

The Conference,

Seeing that the revised Convention concerning the protection against accidents of workers employed in loading or unloading ships contains an Article concerning reciprocity between Members which ratify the said Convention,

Recommends that the following steps shall be taken to expedite the reciprocity provided for in the said Article:

(1) As soon as practicable after the adoption of the revised Convention, arrangements shall be made by the Governments of the principal countries to confer with a view to securing reasonable uniformity in the application of the Convention including more particularly the matters specially mentioned in the said

Article, and the preparation of common forms of certificates for international use.

(2) Reports shall be furnished annually to the International Labour Office as to steps taken in accordance with the previous paragraph.

## RESOLUTION CONCERNING PROTECTION AGAINST ACCIDENTS OF WORKERS ENGAGED IN LOADING OR UNLOADING SHIPS

The Conference,

Having adopted the revised Convention concerning the protection against accidents of workers employed in loading or unloading ships, which Convention contains an Article relating to reciprocity between Members who ratify the Convention; and

Having adopted a Recommendation concerning the steps which should be taken to give effect to the said Article;

Instructs the International Labour Office to review the position as regards reciprocity in 1934 on the basis of the annual reports furnished in conformity with the above-mentioned Recommendation.

## QUESTIONNAIRE CONCERNING PROPOSED ABOLITION OF FEE-CHARGING EMPLOYMENT AGENCIES

The following is the text of a questionnaire which was approved by the Conference for submission to the Member States of the International Labour Organization respecting the proposed abolition of fee-charging employment agencies:—

### *Text of points adopted by the Committee*

(1) (a) Do you consider it desirable that the Conference should adopt international regulations, in the form of a Draft Convention, on the abolition of fee-charging employment agencies?

(b) Do you consider that certain of the following points should form the subject of a Recommendation?

(2) Definition of fee-charging employment agencies:

Should the definition include employment offices maintained by private institutions which, though not conducted on commercial lines, charge fees for their services?

Should it be confined to employment agencies or persons carrying on placing business regularly or occasionally for gain?

Should it exclude commercial employment agencies charging fees to employers only?

If the proposed international regulations do not provide for the abolition of employment institutions which while charging fees for their services are not carried on for gain, should provision be made for the supervision of these institutions?

What provision? Licence to carry on operations? Supervision of operations?

If the international regulations do not provide for the abolition of commercial employment agencies which only charge fees to employers, should provision be made for supervision of such agencies?

What provision? Licence to carry on operations? Supervision of operations?

(3) Scope of application of the regulation:

(a) Should the scope of the prohibition of finding employment for fee be delimited by drawing up a list of the occupations to be covered by the regulation?

(b) Should the scope of prohibition be defined in general terms with certain exceptions for specified occupations?

Statement of exception.

(c) Should the international regulations, while maintaining the general principle of the suppression of fee-charging agencies, contain a list of these exceptions, or should they be left to the States to decide?

(d) Should the prohibition apply to private agencies carrying on recruiting and placing operations internationally?

If this prohibition is not provided for, should special measures of supervision be laid down in respect of the agencies in question?

(4) What measures do you propose for the adjustment of public employment services to meet the requirements of the occupations to be chiefly affected by the abolition of fee-charging employment agencies?

(5) Time limit for the abolition of fee-charging employment agencies:

(a) Should abolition become effective immediately upon ratification?

(b) If not, what period of time do you consider should be allowed before abolition becomes effective.

(6) Measures for the period of transition preceding effective abolition:

(a) Should Governments be asked, by a clause to be inserted in the regulations, not to grant during the period of transition:

(1) either licences for the establishment of new fee-charging employment agencies;

(2) or permission for the transfer of existing fee-charging employment agencies.

(b) Should it be specified that measures shall be taken to control and supervise during that period the activities of fee-charging employment agencies and all forms of paid placing;

(c) Should the control and supervision be exercised in co-operation with public employment offices?

(7) Should the international regulations provide that States should include penalties in their national legislation?

## INVALIDITY, OLD-AGE AND WIDOWS' AND ORPHANS' INSURANCE

The following is the text of a questionnaire which was approved by the Conference for submission to the Member States of the International Labour Organization respecting the question of invalidity, old-age and widows' and orphans' insurance:—

### I. SCOPE

- (1) Principle of compulsory insurance for every person whose normal occupation is employment.

Application of the principle in particular to: manual and non-manual workers, including apprentices, employed by industrial, commercial, transport, mining, agricultural, and forestry undertakings, and in the liberal professions, as well as outworkers and domestic servants.

- (2) Possible exceptions, in particular in the case of:

- (a) employed persons whose remuneration exceeds a prescribed limit;
- (b) temporary workers whose total employment is, by its nature, of short duration;
- (c) young workers under a prescribed age;
- (d) workers too old to enter insurance when they become employed persons;
- (e) members of the employer's family who are not bound by a contract of service.
- (3) Extension of compulsory insurance to persons working on their own account.
- (4) Situation of persons formerly compulsorily insured.

### II. OLD-AGE PENSIONS

#### *Pensionable Age*

- (1) Either uniform age for all insured persons or age varying with:  
sex, occupation, or  
length of the contribution period.

#### *Qualifying period*

- (2) Principle of the qualifying period.
- (3) Maximum length of the qualifying period.
- (4) Relation between the qualifying and periods of sickness and involuntary unemployment, and other periods assimilated to periods of insurance.

#### *Computation of Old-Age Pensions*

- (5) Pension fixed at a flat rate for all insured persons, or pension varying with wages and the number and rate of contributions.
- (6) Effect of periods of sickness (including incapacity due to childbirth and temporary disablement due to an industrial accident or to any other cause) and of involuntary unemployment on the rate of pension.
- (7) Guarantee of a minimum rate of old-age pension. Conditions to be fulfilled in order to qualify for the guaranteed minimum.
- (8) Bonuses in respect of family responsibilities:
  - (a) Principle of bonuses in respect of family responsibilities.
  - (b) Categories of dependants:
    - children of pensioner up to a prescribed age;
    - wife of pensioner as from a prescribed age.

- (c) Computation of bonuses:
  - flat-rate bonuses, or bonuses varying with the rate of pension.
- (9) Supplement where the pensioner needs the constant help of another person.

### III. INVALIDITY PENSIONS

#### *Definition of Invalidity*

- (1) Conceptions of invalidity; general incapacity for work, or occupational incapacity.
- (2) Degree of invalidity entitling to pension:
  - (a) total incapacity, or partial incapacity;
  - (b) determination of the degree of incapacity entitling to pension.

#### *Qualifying Period*

- (3) Principle of the qualifying period.
- (4) Maximum length of the qualifying period.
- (5) Relation between the qualifying period and periods of sickness and involuntary unemployment, and other periods assimilated to periods of insurance.

#### *Computation of invalidity Pensions*

- (6) Pension fixed at a flat rate for all insured persons, or pension varying with wages and the number and rate of contributions.
- (7) Effect of periods of sickness (including incapacity due to childbirth and temporary disablement due to an industrial accident or to any other cause) and of involuntary unemployment on the rate of pension.
- (8) Guarantee of a minimum rate of invalidity pension.
- (9) Supplement where the invalid needs the constant help of another person.
- (10) Bonuses in respect of family responsibilities.

### IV. PENSIONS FOR WIDOWS, ORPHANS AND OTHER SURVIVORS

#### *Conditions of award to be fulfilled by the Insured:*

#### *Qualifying Period*

- (1) Principle of the qualifying period.
- (2) Maximum length of the qualifying period.
- (3) Relation between the qualifying period and periods of sickness and involuntary unemployment, and other periods assimilated to periods of insurance.

#### *Categories of Survivors entitled to Pensions*

- (4) Pension to widow of the insured person. Conditions as to date and duration of marriage, invalidity, age and family responsibilities.
- (5) Pension to invalid widower who had been maintained by his insured wife.
- (6) Pension to children of the insured person up to a prescribed age or, in case of invalidity, irrespective of age. Prolongation of pension in respect of the continuation of studies beyond the prescribed age.

#### *Computation of Survivors' Pensions*

- (7) Pension fixed at a flat rate, or pension varying with the wages of the insured person and with the number and rate of contributions paid in respect to him.
- (8) Effect of periods of sickness (including incapacity due to childbirth and temporary disablement due to an industrial accident

- or to any other cause) and of involuntary unemployment on the rate of pension.
- (9) Distribution among the survivors of an inclusive pension, computed without regard to the number of survivors. Award to each survivor of a pension at a rate which is uniform for all survivors belonging to the same category, subject to a legal maximum limiting the total rate of the pensions paid in respect of one insured person.
  - (10) Guarantee of a minimum rate of survivor's pension.
  - (11) The award of funeral benefit (lump sum at death) to survivors:
    - (a) in addition to pensions; or
    - (b) on behalf of persons who have not acquired the right to pensions.
- (b) conditions of approval of institutions founded on the initiative of the parties concerned or their organizations: e.g. minimum membership; accumulation of contribution and contingency reserves; affiliation to a reinsurance institution.
  - (2) Principle of self-government of insurance institutions:
    - (a) self-government in financial matters: separation of the funds of insurance institutions from public funds;
    - (b) self-government in administrative matters: participation of representatives of the parties concerned in the management of insurance institutions.
  - (3) Financial and administrative supervision by the public authorities over management as undertaken by the representatives of the parties concerned.

#### V. BENEFITS IN KIND

- (1) Action of invalidity, old-age and widows' and orphans' insurance on behalf of the health of insured persons. Obligatory or optional character of such action.
- (2) Direct action:
  - (a) curative benefits to diminish or postpone invalidity;
  - (b) preventive benefits in individual cases.
- (3) Indirect action:
  - (a) participation in the campaign against social diseases;
  - (b) development of medical equipment.

#### VI. FORFEITURE, SUSPENSION AND LAPSE OF BENEFIT RIGHTS.

- (1) Fraud at the expense of the insurance institution. Commission of a crime or wilful misconduct.
- (2) Regulation of coincident rights arising either on the happening of several events insured against under one scheme of social insurance, or on the happening of one event insured against under several schemes.
- (3) Maintenance of the beneficiary at public expense.
- (4) Disappearance of the condition in respect of which the pension was awarded: recovery from invalidity or remarriage of a widow.

#### VII. FINANCIAL RESOURCES.

- (1) Principle of contributions from insured persons.
- (2) Principle of contributions from employers in general, and in particular for home workers, apprentices and workers remunerated in kind instead of in cash.
- (3) Principle of subsidies from public authorities in general, and in particular the payment of contributions of workers for periods of military service performed in accordance with general compulsory military service laws.
- (4) Relation between the insured person's and the employer's contributions.
- (5) Methods of subsidy by public authorities.
- (6) Payment by the employer of the employers' contribution in respect of employed persons not liable to insurance.

#### VIII. ADMINISTRATIVE ORGANIZATION

- (1) Administration of compulsory insurance by institutions not carried on with a view of profit:
  - (a) institutions founded by the public authorities;

#### IX. SETTLEMENT OF DISPUTES.

- (1) Right of appeal to be secured to the insured person and his survivors, and also to the employer, in case of dispute concerning:
  - (a) liability to insurance;
  - (b) the rate of contribution;
  - (c) right to benefit;
  - (d) participation in the management of insurance institutions.
- (2) Desirability of referring the settlement of disputes in the cases enumerated in the preceding point, to special tribunals on which insured persons and their employers are represented.

#### X. POSITION OF FOREIGNERS.

- (1) Principle of equality of treatment for national and foreign workers.
- (2) Extension of the principle of equality of treatment to:
  - (a) all foreigners;
  - (b) nationals of those States only which have ratified a general international Convention.
- (3) Application of the principle of equality of treatment to:
  - (a) admission to compulsory insurance;
  - (b) provisions relating to contributions and to benefits;
  - (c) participation in the management of insurance institutions.

#### XI. RIGHT TO PENSION AND RESIDENCE ABROAD.

- (1) Principle of the retention of the right to pension without condition of residence.
- (2) Restriction of the application of this principle to nationals of States which have ratified an international Convention providing for the waiver of the condition of residence.

#### XII. MAINTENANCE OF MIGRANTS' PENSION RIGHTS IN COURSE OF ACQUISITION.

- (1) Principle of the maintenance of the pension rights of insured persons who pass from one country to another.
- (2) Application of the principle of the maintenance of pensions rights to:
  - (a) all insured persons, irrespective of nationality;
  - (b) insured persons who are nationals of States which have ratified an international Convention providing for the acceptance of the principle of the maintenance of pension rights.

- (3) Choice of the methods of maintaining pension rights to be recognised in the international regulations:
  - (a) transfer of contributions;
  - (b) maintenance of rights in each country and distribution of the pension liability between the respective insurance institutions;
  - (c) transfer of the capital representing acquired rights.
- (4) Transfer of contributions:
  - (a) place of transfer:
    - insurance institution of the country of which the insured person is a national;
    - insurance institution of the country where the insured person first became liable to insurance;
  - (b) intervals or date of transfer:
    - periodical transfer (e.g. yearly);
    - transfer at date when insured person leaves a country;
  - (c) method of calculating pensions rights:
    - principles by which pensions rights are to be calculated by the insurance institution which has received the transferred contributions.
- (5) Maintenance of rights in each country:
  - (a) qualifying period and maintenance of continuity of insurance:
    - addition of the periods of insurance (and assimilated periods) completed in different countries to calculate qualifying period and maintain continuity of insurance;
  - (b) calculation of pensions liability of respective insurance institutions:
    - the fixed components of the pensions under each legislation are reduced *pro rata temporis*;
    - the components of pensions which vary with the number and rate of contributions are paid by the insurance institution of each country in accordance with national legislation;
  - (c) protective clause:
    - provisions guaranteeing to the insured person a total pension at least equal to that which he would obtain under the legislation of a single country on the ground only of the period of insurance completed in that country.
- (6) Transfer of capital representing acquired rights:
  - (a) method of calculating the capital representing the rights acquired by the insured person on leaving the insurance institution:
    - rules for the determination of the capital representing the rights acquired at the time when an insured person leaves an insurance institution,
  - (b) date of transfer of capital:
    - transfer when the insured person migrates to another country;
    - transfer when the event insured against happens;
  - (c) method of calculating pension:
    - calculation of pension payable by the insurance institution which has received, capital transferred.
- (7) Miscellaneous questions connected with the maintenance of pension rights in case of invalidity:
  - (a) determination of right to pension and calculation of pension, when the definitions of invalidity in the national laws concerned are different;
  - (b) imposition, for the purpose of the maintenance of the right to a pension of several conditions relating to the supply of information to, and to the exercise of supervision by, the insurance institution of the country which the insured person has left, as for example:
    - obligation for the sickness insurance institution of the country which the insured person has entered to notify the invalidity insurance institution of the country which he has left in case of prolonged illness which may be expected to result in a claim for pension;
    - obligation for the insured person to submit to periodical or preventive examinations by a medical practitioner accredited to the diplomatic or consular authorities of the country which he has left;
    - obligation for the sickness insurance institution and the insured person to carry out all instructions of a preventive nature given by the said medical practitioner.
- (8) Transfer arrangements:
  - (a) Determination of the sums to be transferred in the currency of each debtor State;
  - (b) Method of determining the rate of exchange to be adopted in effecting transfers;
  - (c) Organizations to be utilized for the purpose of effecting transfers: postal service, saving banks, etc.

### RESOLUTION CONCERNING SAFEGUARDING THE INTERESTS OF DISTANT COUNTRIES IN THE WORK OF THE INTERNATIONAL LABOUR ORGANIZATION.

"Whereas the International Labour Organization should, in harmony with the spirit of universality embodied in Part XIII of the Peace Treaty, respect and safeguard the interests of the Member States situated at long distances;

"Whereas in recent years criticisms have been raised at the sessions of the International Labour Conference and on other occasions to the effect that the International Labour Organization has tended to lay undue emphasis on the European countries and has failed to pay proper attention to the interests of non-European countries;

"Whereas any ground for such criticisms or allegations as above should be removed speedily with a view to ensuring the maintenance of loyal collaboration of all the Member States far and near; and

"Whereas Article 401 of the Peace Treaty imposes specifically the obligation on the Director of the International Labour Office to transmit the Agenda so as to reach the Members four months before the meeting of the Conference in order to enable the distant countries to make adequate preparation and thus to contribute to the success of the work of the Conference;

"The Sixteenth Session of the International Labour Conference draws the attention of the Governing Body to the necessity of a scrupulous respect for the interests of distant countries in

the conduct of its functions and to the need particularly of securing a strict observance of the provisions of Article 401 of the Peace Treaty in fixing the Agenda of the International Labour Conference."

### RESOLUTION CONCERNING FORTY-HOUR WEEKLY WORK PERIOD

"In view of the continuance of the present depression with the sufferings it involves, it must be affirmed that palliatives are insufficient and that, if the suffering caused by the economic depression and by unemployment is to be mitigated, the causes of the depression must be directly attacked.

"In view of its prolongation unemployment must no longer be regarded merely as an effect of the depression; it has become one of the causes which aggravate it.

"The disequilibrium between disproportionately increased production and a capacity for consumption which was insufficient even at the beginning of the depression and which to-day is still further diminished condemns any policy of wage reduction which experience shows is in contradiction with economic requirements, in addition to being unjust.

"The principal means of restoring the equilibrium which has been upset must be sought in the reduction of hours of work. The increase in individual output renders this measure indispensable and urgent. By this means production can be adjusted to the level of a temporarily limited capacity of consumption, available work can be permanently distributed over a larger number of persons, and the unemployed can be reinstated in their positions in the economic system. Further, by this means the wage earners will secure a legitimate share in the benefits of technical progress.

"The Conference accordingly invites the Governing Body of the International Labour Office to investigate the question of the legal institution of the forty-hour week in all industrial countries, with a view to the early adoption of international regulations on the subject."

### RESOLUTION CONCERNING UNEMPLOYMENT

"Whereas, as is shown by the Report of the Director to the Sixteenth Session of the Conference, the general economic crisis from which the world is suffering has continued to grow in severity during the last three years, and is at present the cause of the unemployment of at least 25 million workers;

"Whereas the increasing falling-off in industrial activity, if it continues, must eventually enhance still more the suffering and privation which afflict the unemployed and also threaten the workers in employment;

"Whereas the situation is such that more than ever the peace and harmony of the world are imperilled;

"Whereas the International Labour Organization was founded in order to remove this menace by the establishment of social justice;

"Whereas social justice requires order and equilibrium in the economic system, and this can only be secured as the result of the efforts of all nations and international institutions;

"Whereas the economic and financial bodies of the League of Nations have, through the work of their experts, succeeded in reaching solutions which have been sufficiently worked out and only await decisions;

"The International Labour Conference solemnly calls upon the Council of the League of Nations and all the Nations themselves to unite in endeavours to find the road to general prosperity by means of international decisions, and

"With this object in view requests:

"(1) That a meeting of plenipotentiary delegates should be immediately convened with instructions to draw up a list of big international works for economic equipment, to make the necessary financial arrangements for them, and to have them put in hand without delay;

"(2) That, at the forthcoming Conference at which the problem of reparations and other international political debts is to be again dealt with, the League of Nations should intervene, in virtue of the authority conferred on it by Article 24, paragraph 1, of the Covenant, and impress upon the parties immediately concerned the urgency of a final settlement and the necessity of ensuring that this settlement is in harmony with the general interests of world economy;

"(3) That in connection with that Conference a meeting of plenipotentiaries of all States should be convened to settle the general problems of currency and credit and to institute an international monetary system possessing the necessary qualities of stability; and

"(4) That an international Conference on production and international trade should be convened, comprising plenipotentiaries with instructions to draw up, with the help of delegates from the most representative organizations of employers and workers in each country, draft conventions to be immediately submitted for ratification by the States, with a view to a resumption of economic activity, on the basis of broad concerted plans taking into consideration the gradual and systematic increase in the consumption of the masses and the regular extension of international trade.

"The Conference also requests that whereas among the public works proposed, public health works have the advantage of increasing the welfare of populations and raising their standard of living, the Governing Body should instruct the International Labour Office to request the Governments concerned to place upon their program of public works intended to diminish unemployment, public health works and, in particular, hydraulic works, water-supply, abolition of unhealthy conditions, construction of workers' dwellings and electrification of rural districts."

## RESOLUTION CONCERNING METHODS AND CONDITIONS OF RECRUITING LABOUR AND THE TERMS OF LABOUR CONTRACTS

"The Sixteenth Session of the International Labour Conference,

"Having regard to the progress recently accomplished in certain territories, and particularly in the Netherlands East Indies, towards the abolition of long-term labour contracts, breaches of the terms of which involve criminal penalties; and

"Having regard to the desirability of securing the general application of this reform, and thus taking a further step in the direction of creating more humane conditions of labour for the classes of workers concerned;

"Re-affirms the Resolution by which the Twelfth Session of the Conference expressed the opinion 'that even the suppression of forced

labour will not abolish all forms of compulsion to labour of which workers can complain, and particularly in connection with long-term contracts,' and instructed the International Labour Office 'to undertake all necessary studies on all the other cases of compulsion to labour with a view to the question of their complete abolition being placed on the Agenda of one of the next Sessions of the International Labour Conference with the shortest possible delay'; and

"Requests the Governing Body of the International Labour Office to consider the possibility of placing on the agenda of a very early Session of the Conference the questions of the methods and conditions of recruiting labour and of the terms of labour contracts."

## RESOLUTION CONCERNING SYSTEMS OF COLLECTIVE BARGAINING IN AGRICULTURE

"At its Eleventh Session the International Labour Conference requested the International Labour Office to increase its information on existing systems of collective bargaining in agriculture, to form the basis of a discussion at an early Session of the Conference, and with a view to the rapid acceleration in as many countries as possible of this means of improving the conditions of agricultural labour.

"A draft report on this matter was accordingly communicated to the present Session of the Conference by the International Labour Office, but it was not distributed in time to allow of a formal discussion for the purposes mentioned above.

"The Conference re-emphasises the value of collective agreements for improving the conditions of agricultural labour. At the same time the Conference recalls the importance to be attributed to the rights of association and com-

bination of agricultural workers as a condition for the development of collective agreements in agriculture.

"As the report on the application of the Convention adopted by the Third Session of the Conference concerning the rights of association and combination of agricultural workers is due, in accordance with Article 8 of this Convention, to be laid before the Session of the Conference to be held next year, the Conference considers it desirable that the examination of the report on collective agreements in agriculture should take place at that same Session.

"The Conference accordingly invites the Governing Body to instruct the International Labour Office to submit to next year's Session of the Conference the final report on this question, account being taken of the observations which may be made by the organizations concerned."

## RESOLUTION CONCERNING WORKERS' HOUSING

"Whereas it is urgent, in the interest of the physical and moral welfare of the workers and with a view to ensuring orderly social progress, that the workers should be provided with adequate housing accommodation;

"Whereas the question of workers' housing is of direct concern to the workers of all countries, whether European or extra-European; and

"Whereas the International Labour Office has made considerable investigations on this

subject in pursuance of resolutions of the 1922 and 1928 Sessions of the Conference, so that it already possesses the preliminary information necessary for forming a basis for an international discussion of the problem;

"The Sixteenth Session of the International Labour Conference requests the Governing Body to consider the possibility of placing the question of workers' housing as an item on the Agenda of an early Session of the Conference."

## RESOLUTION CONCERNING SILICOSIS

"Whereas a resolution was adopted at the Session of the Conference by which the Governing Body was invited to place on the Agenda of an early Session of the International Labour Conference—and, if possible, of the 1932 Session—the inclusion of silicosis in the list of occupational diseases contained in the Convention concerning workmen's compensation for occupational diseases adopted in 1925;

"Whereas the Governing Body, when discussing this resolution at its session in October, 1931, considered it inexpedient to give effect to this invitation;

"Whereas silicosis is recognized as an occupational disease conferring a right to compensation in the following countries: Argentina, Australia (New South Wales, Queensland, Tasmania, Western Australia, Northern Territory of Australia), Bolivia, Brazil, Bulgaria, Canada (Alberta, Quebec, Ontario), Germany, Great Britain, Mexico, New Zealand, South Africa, Sweden, U.S.S.R.—and the study of this disease is in general so advanced that it seems entitled to be recognized internationally as an occupational disease;

"In view of the repeated demands of international trade union organizations comprising the workers interested in the question, viz., the International Stoneworkers' Federation, the Miners' International Federation, the International Federation of Pottery Workers, and the

International Federation of General Factory Workers;

"The Conference again urgently invites the Governing Body to consider the possibility of placing the question on the Agenda of an early Session of the Conference."

#### RESOLUTION CONCERNING DIRECT REPRESENTATION AT THE INTERNATIONAL LABOUR CONFERENCE OF COLONIES AND MANDATED TERRITORIES.

"Whereas the International Labour Conference has already affirmed by resolutions adopted at its Tenth, Twelfth and Fifteenth Sessions the desirability of securing direct representation at the Conference of colonies and mandated territories;

"Whereas it has not hitherto appeared possible to devise means of giving any reasonable measure of satisfaction to this demand; and

"Whereas the Conference is increasingly convinced that it is desirable, when a question is placed on the Agenda of the International Labour Conference which affects the administrations, employers and workers of territories not directly represented in the General Conference such as mandated territories and colonies, or the employers and workers of Members in whose

territories the ruling race is different from the race to which the majority of the working population belongs, that the representatives of such administrations, employers and workers should have the opportunity of expressing their views on the question on the Agenda;

"The Sixteenth Session of the International Labour Conference requests the Governing Body of the International Labour Office to consider, where necessary, and subject to the financial possibilities, the possibility of convening, before the first discussion of such a question by the General Conference, a preparatory advisory conference at which the said administrations, employers and workers would be as widely represented as possible."

#### RESOLUTION CONCERNING THE EFFECT OF OPIUM-SMOKING ON WORKERS

"Whereas the report submitted to the Council of the League of Nations by the Commission of Enquiry into the control of opium-smoking in the Far East contains evidence that the opium-smoking habit is widespread among immigrant Chinese workers and exists to some extent among workers of other races, that the habit has harmful effects on the health, welfare and earning power of such workers, and that in some cases the habit may have repercussions on the conditions of their recruitment and employment; and

"Whereas it is desirable to secure as full information as possible regarding the effects of opium-smoking on the conditions of the workers concerned, with a view to the consideration of

measures for the suppression of such abuses as may be found to exist;

"The Sixteenth Session of the International Labour Conference requests the Governing Body of the International Labour Office to consider the question of instructing the Office to undertake a documentary investigation, with the assistance of the competent bodies of the League of Nations and of the Governments of the Members concerned, into the extent of opium-smoking among workers, and the effects of opium-smoking on the conditions of recruitment, engagement and employment and on the efficiency, welfare, sickness and death rates of such workers, and to report to the next Session of the Conference."

#### RESOLUTION CONCERNING A "GOLD TRUCE" TO PREVENT FURTHER AGGRAVATION OF THE ECONOMIC SITUATION

"Whereas effective measures for combating the present crisis involve examination, negotiations and decisions which may occupy some considerable time;

"Having noted a proposal concerning the 'gold truce' which, in the opinion of its authors, might be calculated to create a transitional period making it possible to stop the further aggravation of the economic situation, especially in the debtor countries;

"Whereas such a period would make possible the examination, negotiations and everything which appears necessary for action to remedy the present crisis;

"To this end the Conference requests the League of Nations to place before its competent bodies as early as possible the proposal for a 'gold truce.'"

## Annual Report of the Director of the International Labour Organization (League of Nations)

Each year the Director of the International Labour Office presents to the Conference an annual report designed to focus the attention of the delegates on problems of prime importance which appear to call for serious consideration by the Organization. Accordingly the annual report which was presented by the Director, Mr. Albert Thomas, to the 16th Conference last month deals primarily with the problems that have been created, for the Organization itself as well as for the States members, by the continued economic depression. Next, the report discusses the action of the Organization in the matter of unemployment, an endeavour being made to show what advance has been made, under the auspices of the Geneva Office in regard to unemployment insurance, the redistribution or "rationing" of work, placing in employment, directed migration, and above all, the stimulation by governments of public works, both on a national and on an international scale. Finally, the Director deals with the problem of economic reorganization and the restoration of a balance between production and consumption by the development, through international co-operation, of a system of economic planning.

### Difficulties of the Office in 1931

"The economic depression," it is stated, "has been the main hindrance to any fresh development of international labour legislation. It has caused a sort of instinctive, unreasoning reaction which has led States and nations to withdraw into themselves. It has made them temporarily sceptical or uncertain as to the utility of internationalism."

Ratifications during the past year numbered 28 as compared with 38 for 1930-31. Offsetting this decline, however, it is pointed out that owing to the early date of this year's conference, the past year covers only ten and a half months, the last few weeks before a conference being usually the most productive of ratifications; in fact the number of ratifications authorized increased from 26 to 55. Moreover, special circumstances account for the delay in ratifying some important recent conventions, such as that concerning the marking of the weight on heavy packages transported by vessels (Some of the principal countries could only ratify this convention if simultaneously ratified by other countries); the convention concerning the protection of longshoremen (this has given rise to a number of technical considerations); the convention

concerning forced or compulsory labour (this convention concerns particularly only a limited number of states); the convention on hours of work in commerce and offices (this convention has not yet secured a single ratification in spite of the care with which its scope was defined, partly owing to misunderstanding as to its effect); the convention on hours of work in coal mines (the seven principal coal-producing states desire that this should be ratified by all simultaneously).

"The work of ratification may be slow," it is concluded, "but it is proceeding with regularity in a very large number of States and there will be fresh progress to report each year."

*The Non-European States.*—An important problem for the Organization is the attitude of the Non-European States. These States complain that the organization as a whole is European in control and direction, that there are eighteen European members—Government, employers and workers—in the Governing Body, out of a total membership of twenty-four, while in each of the employers' and workers' groups there is only one member out of six who is a non-European representative; and yet the countries outside Europe contribute nearly 40 per cent of the total subscriptions to the Organization.

The Director points out that "so far as the employers' and workers' groups are concerned, it is open to them, with the independence which they have both enjoyed for the last ten years, to change the proportion between European and non-European representation among their members, and they will perhaps deem it desirable to do this."

Another complaint is that the chief officials are representatives of European countries. This difficulty is removed by the decision of the governing Body in October, 1931, that its chairman should be elected in future by a system of rotation.

Non-European States have long complained of the small number of officials (18 out of 420) appointed to the Office from their nationals. The report states that the Office recognizes that it is morally and administratively incumbent upon it to increase the proportion of non-European officials. This policy is now being followed.

Other complaints are to the effect that officials of the Office are comparatively seldom sent on missions to non-European States; that too few of their experts are appointed to committees; that the cost of sending delegations

to Geneva from overseas is unduly heavy. The Director states that the Office was somewhat perturbed by these and other criticisms, and that it will "devote its best endeavours to bringing about a different situation as soon as possible, so as to create a basis for mutual confidence. As a practical step, following a suggestion made by the Office in October last, the representatives of non-European States in the Governing Body have met in a special committee to examine the situation and explore the means of improving it. A first meeting was held in January, and it is the discussions which then took place that have inspired the preceding observations. A further meeting will be held in April. This continued collaboration cannot help but produce results."

*The Chief Industrial Countries.*—The problem of the participation of the European industrial countries differs from that of the non-European States, and a tendency has been shown by them to neglect the Organization just at a time when its principles might be of assistance in bringing about useful reforms. In this connection the Director discusses the recent relations between the Organization and France, Italy Germany and Great Britain. Great Britain, he points out, has now set out "to solve its own industrial problems," and "appears to have given up the systematic policy of using the Organization to remove the disadvantages of competition based on inequality of working conditions. Possibly in the future, and indeed in the near future, events may show that it is impossible entirely to abandon this policy, which it is true has not been entirely successful up to the present, but which is in accordance with the spirit of the Treaties of 1919." "Who can tell," the Director continues, "whether the general spread of protectionism, with the more acute consciousness which this will give to each nation of its own economic difficulties, will not again make it necessary to attempt some degree of international standardization of conditions of labour? Who knows whether industrial agreements between country and country, which protectionism itself will render more necessary, will not make such standardization easier to bring about? The negotiations which are at present being carried on both in the economic and in the labour fields in regard to the coal-mining industry would seem to justify such a hope. The fact remains however, that for the present the difficulty exists, and this must be frankly recognized if the Organization is to develop and strengthen on new lines that collaboration with Great Britain which has from the beginning

been one of the fundamental features of its existence."

### Economic Depression

Under this heading the Director quotes figures showing the great increase of unemployment throughout the world, and discusses the causes of this aggravation, and its effects on social policy. In regard to these effects he says:—"It cannot really be said that there has been any retrogression, there has been a tightening up in certain directions with a view to remedying abuses or errors; there has certainly been a tendency to cut down costs; and in some cases a check has been put temporarily on the carrying out of new projects. In social insurance, in particular, the depression has had serious repercussions on the daily operations of the insurance institutions. On the whole, however, the pillars of labour legislation have not been shaken." The Director believes that the reductions in the level of wages that have followed the depression have not been very considerable, though the wage statistics available at the time of writing show that in the majority of countries there has been a certain decline in money wage rates, and still more in money earnings, during the depression.

In concluding this section of his report the Director states that in spite of its duration, its magnitude and the considerable extent to which it developed in 1931, the depression has not, notwithstanding certain attempts on them, made a breach in the principles of social policy. It has certainly prevented any notable expansion of social policy, and in some cases has brought it to a standstill. It has also brought upon millions of human beings sufferings which social policy still alleviates only inadequately. But, tested as it has been by this depression, the International Labour Organization can feel that it is now firmly established and stable, and capable of further action and growth after the storm has passed. . . .

"It is a matter for real gratification to find that on questions of social policy there still subsist in each country, notwithstanding these tendencies to isolation, common ideas and similar conceptions of humanity and justice which remain strong and unshakable. There are thus grounds for hope that the isolated but anxious nations of the world can still be grouped together and unite for co-operation along positive lines. Surely the struggle against the depression itself and against the terrible unemployment which it has involved should furnish the first occasion for such co-operation. Surely in a common task of this kind the nations should find cause for greater

confidence. In any case, the International Labour Organization cannot rest content to allow social policy simply to 'mark time,' even if there is no retrogression. It must endeavour to make the struggle against unemployment the occasion for reviving and stimulating social policy and demonstrating its real value."

### The Organization and Unemployment

The Director next passes in review the various measures taken by the Organization with a view to the relief of unemployment. These measures have, he allows, been criticised as being merely palliatives, but he claims they will be found in the end to have been more effective for remedying the situation than was expected.

*Unemployment Insurance.*—On this subject it is pointed out that at the time of the negotiating of the Peace Treaty, a preference at any rate was expressed for unemployment insurance. The Recommendation of the Washington Conference advocates the establishment of "an effective system of unemployment insurance." The progress of this form of insurance was indicated in last year's Report. At the end of 1930 there were 35,600,000 workers compulsorily insured against unemployment (not including 10 million Russian workers, since the U.S.S.R. had abolished unemployment benefit in view of the state of the labour market). In addition, there were 2,910,000 voluntarily insured persons. The position was not appreciably altered in 1931. The figures rose to 35,800,000 compulsorily insured and 3,100,000 voluntarily insured persons.

Reference is made to the conditions of distress existing in a country without unemployment insurance. "If any justification of it were required, it would be found in what is happening in the United States of America. Unemployment in that country has been steadily increasing for the past thirty months; there may be 8-10 million wholly unemployed. Although economic statistics are more highly developed in the United States than anywhere else, the absence of an insurance system means that no accurate figures of employed persons are available. If families are included, there are perhaps some 20 million persons at present suffering from unemployment. But, unemployment insurance does not exist in the United States except in the rudimentary state of private institutions established in certain undertakings. Nearly one-fifth of the population in the richest country is now dependent on charity for a livelihood."

"Speaking generally," the Director concludes, "unemployment insurance may have given rise to certain abuses and may have required reform in some countries, but the principle remains intact. The experience now acquired makes it possible to define the most effective methods of application. Until this year, the Governing Body has been unable to place the question on the Agenda of a session of the Conference. That has now been done, and the question will be discussed at the next session. It will be considered in the widest possible form. The item includes both unemployment insurance and unemployment relief. Social insurance, which was recommended as early as 1919, must, it would seem, be extended and consolidated. It should also be supplemented by relief measures. It would certainly be desirable to distinguish clearly between the two ideas. The present intensity of unemployment, its extent and its duration have exceeded everything which the actuaries could have foreseen. In the light of this experience it would seem unwise in future to reckon for the relief of the unemployed exclusively on the funds paid by employers, workers and Governments to insurance institutions in the form of regular contributions. In addition to insurance in the strict sense intended to cover a definitely limited risk which is regarded as normal, consideration will no doubt have to be given to the establishment of supplementary relief institutions to deal with periods of abnormal unemployment. This will be one of the subjects to be discussed at next year's Conference, and further progress should result."

*Redistribution of Work.*—Under this heading the Director directs attention to the following proposals made by the Unemployment Committee of the Governing Body, and adopted by the Body early this year (LABOUR GAZETTE, January, 1932, page 49). These proposals suggest the abolition of overtime and the shortening of working hours, and the framing of temporary international agreements as to short time standards in particular branches of industry. Such measures, in the Director's opinion, should, if generally applied, help to bring about "perhaps a not inconsiderable decrease in the number of unemployed."

*Placing in Employment.*—After a review of the extensive work of the Organization in the direction of the establishment of an adequate placing service and the co-ordination of national employment agencies, the Director intimates that an international Placement Conference is now being arranged. "It is to be hoped," he concludes, "that this conference

will mark fresh progress towards systematic organization of the international labour market, which is as necessary to world economic equilibrium as public placing services in the individual country are to national economy. International collaboration between public placing agencies, provided for twelve years ago in a Convention which has now been ratified by twenty-five States, will in any case be an important factor for solving the important problem of migration which is so closely bound up with the question of placing."

**Public Works.**—As international organizations for placing and for migration cannot become effective immediately the organization concentrated its energies during the past year in the question of public works. The Director summarizes these activities and refers to great plans now steadily taking shape for the organization of international undertakings—highways, inland navigation, electrical power development—with their immediate effects for considerable numbers of unemployed "and with all their psychological and political potentialities." However, he points out, "the possibilities of public works should not be exaggerated. An international program of such works would give employment to a certain number of unemployed; it would revive activity in different industries; it would act as a sort of 'starter' to the process of recovery; it would also, especially for Europe, have the inherent virtue of being a means to international co-operation. And yet, even if action should be concentrated on the primary task of endeavouring to get rid of the depression and on measures calculated to give an immediate stimulus to an expansion of business, there are many other directions in which action is just as necessary and perhaps more important—measures for ending disorganization in the international monetary situation; for remedying insufficiency of gold; a large scale credit policy; settlement of debts and reparations; and removal of the obstacles to international trade."

**Wages Policy.**—In this connection the Director recalls that Part XIII of the Treaty of Peace and Article 427, lay down certain principles which should be followed for a just and equitable settlement of questions of wages. These clauses prescribe "the provision of an adequate living wage" and "the payment to the employed of a wage adequate to maintain a reasonable standard of life, as this is understood in their time and country," as well as the principle that "men and women should receive equal remuneration for work of equal value." "These principles have never been disputed. They have formed the basis of inter-

national action taken on the question of wages by the International Labour Office and the Conference; they have inspired certain investigations; and also the Convention of 1928. Attention should no doubt be drawn to them during the present depression if, under the pretext of allowing free play to economic forces, any attempts were made to reduce wages below a reasonable standard or below what may at a particular time and in a particular country be regarded as the minimum necessary for existence."

The conclusion is finally reached that the problem of wages is only part of the wider problem of adapting production to consumption and restoring the balance between productive capacity and purchasing power. This conclusion forms a transition to the last section of the report.

### Economic Planning

In the final section of his report the Director discusses the prospects of rationalizing production in harmony with the needs of consumption, and the possibilities of some form of economic planning. Such a development might, he thinks, become a means of consolidating the results that have already been achieved or are in process of achievement. He speaks of "the revolt of the conscience of mankind against the disorganization of world economy and the evils which this has caused. The sight of extreme poverty side by side with superabundance of wealth, the paradox of the miraculous progress of technical invention side by side with the privations of the masses, could, it seemed, no longer be borne. Men of all denominations, both Catholics and Protestants of all kinds, the followers of all political parties, Socialist, Conservative or Liberal, members of Parliament, statesmen, manufacturers, financiers and farmers—all joined in desiring and demanding an organized economic system."

As indications of the general trend of thought on this subject the report cites the conclusions reached by the International Chamber of Commerce (Washington, May, 1931), which recommended international action to lessen the fluctuations of the labour market; the Papal Encyclical *Quadragesimo Anno*, dated May 15, 1931, and the pronouncements of other religious bodies; the conclusions of the International Industrial Relations Association at Amsterdam; the report of the Macmillan Committee presented to the British Parliament last year; the "Swope Plan" in the United States—all these movements tending towards the establishment of a system of organized or planned economy, and other declarations.

The Director enumerates four types of economic planning, as follows:—

(a) The first type is "absolute Socialist Planning." This implies a centralized system of economic and social life in which production, consumption, standards of living and all economic processes are subject to a unified, central control and are directly determined. This is the traditional Communist or Socialist ideal which has nowhere been put completely into operation.

(b) The second type is "partial State Socialist Planning." This type of planning does not involve direct fixing of wants or habits of consumption. Production is, however, planned by the State and financially controlled by it. The present organization of Soviet Russia is regarded as coming within this category.

(c) The third type is the "voluntary business type of planning." It is at present advocated by business men in the United States and by many economists. The main idea is that planning should be practised without disturbing the bases of present-day economic society and that the economic leadership of the business group should be maintained.

(d) The fourth type may be called the "social progressive type." It is advocated by those who can accept neither the business nor the Soviet type of planning. It involves the adoption of measures for increasing mass purchasing power and redistributing income. Without upsetting the system of private property, it calls for planning which has authority to make employers and business men follow the economic lines best possible from the national point of view. It sees the necessity of some central and unifying agency which can gradually apply the principle of planning on a larger scale. The Italian Fascist economic system possesses some general characteristics which make it possible to include it in this class.

The Director analyses some of the plans that have been advanced or actually carried out in the direction of planned economy, among these efforts being the co-operative movement, which is considered as being, by its nature, "a means for substituting concerted action for scattered individual action and replacing the so-called natural laws by reasoned organization." Reference is also made to the control of production in various countries, notably Germany, and to the proposals for a "managed currency," mainly originating in Eng-

land. "In any case," the Director concludes, "it is the duty of the Organization as a whole, and of the Conference which manifests the views and purposes of the Organization, to indicate under what conditions and to what extent endeavours to promote a planned economy are necessary for the establishment of social justice.... Surely the States Members of the International Labour Organization cannot forget the objects and the program laid down in the Treaties of the Peace to which they have solemnly subscribed. The social character of a planned economy must, from the point of view of the Organization, be determined by the body of reforms proposed by the Treaties and the standard of civilization which the Treaties set up as that which should be universally achieved and maintained for the well-being and dignity of mankind. The duty of the International Labour Organization is to assign their object and character to the steps which are taken in the direction of economic planning, and to draw attention to the urgent need of such steps for the realization of its own program."

If there is any one measure which the Director considers more urgent than any other, and without which the financing of public works and the removal of hindrances to trade and the revival of production cannot be effected, it is the restoration of a stable international monetary system. This is the first measure towards a planned economy. It lies outside the competence of the International Labour Organization, but it is its duty to make an urgent appeal that attention should be given to it with a view to remedying the depression.

Another conclusion to be drawn from the present Report is that there is a need for fuller and more constant collaboration between all the factors in production, if it is desired to induce Governments or other competent authorities to accept and give effect as soon as possible to the measures which are necessary for the well-being and dignity of the workers.

The report concludes with a discussion of recent developments in industrial relations—works councils, international co-operation, etc.

Appendices to the report give information in tabular form as to the action of the various states in regard to the Draft Conventions and Recommendations of the International Labour Conference.

### 57th Session of Governing Body

The Governing Body of the International Labour Office held its 57th Session at Geneva from April 6 to 9, the following members being present:—

*Government Representatives:* Mr. Mahaim (Belgium), Chairman; Mr. Weigert (Germany); Mr. de Macedo Soares (Brazil); Senator Robertson (Canada); Mr. Bramsnaes (Denmark); Mr. Sanchiz Banus (Spain); Mr. Picquenard (France); Mr. Somervell (Great Britain); Sir Atul Chatterjee (India); Mr. de Michelis (Italy); Mr. Yoshisaka (Japan); and Mr. Zagrodski (Poland).

*Employers' Representatives:* Mr. Kirkaldy (Great Britain); Mr. Lambert-Ribot (France); Mr. Miyajima (Japan); Mr. Oersted (Denmark); Mr. Olivetti (Italy); and Mr. Vogel (Germany).

*Workers' Representatives:* Mr. Hayday (Great Britain); Mr. Johanson (Sweden); Mr. Jouhaux (France); Mr. Mertens (Belgium); Mr. Moore (Canada); and Mr. Muller (Germany).

The Governing Body took a number of decisions concerning the organization of the International Labour Conference.

At the request of the British Government, the Governing Body decided by 15 votes to 8 to request the Council of the League of Nations to ask the Permanent Court of International Justice for an advisory opinion as to whether the Convention concerning the employment of women during the night applies to women employed in the industrial undertakings covered by the Convention who hold positions of supervision or management and are not ordinarily engaged in manual work.

The Governing Body decided on the list of names proposed for the Committee of Experts on women's work which the Governing Body, at its last Session, had decided to set up. It will be recalled that it is to be a correspondence committee, the main object of which will be to give, by correspondence, opinions on the social and economic aspects of any questions relating to women's work the study of which may be contemplated.

The Governing Body authorized the Director to summon, after consulting the Officers of the Governing Body, the tripartite Committee on Automatic Coupling with a view to presenting to it the suggestions of the Sub-committee on Automatic Coupling which met at Geneva on February 29.

The Governing Body then considered the question of the possible adhering of non-Member States to International Labour Conventions. It was agreed to carry this study further.

The Governing Body adopted by 16 votes, with 8 abstentions, the estimates for the International Labour Organization for 1933, which amount to 8,916,672 Swiss francs net. This figure does not include any provision for the special Maritime Session of the International Labour Conference which had been contemplated. The workers' group demanded the maintenance of the credit required for holding this Conference, but this proposal was rejected by 12 votes to 10.

The Governing Body considered the report of the Committee on Cost of Living and Wages Statistics, to which had been submitted the results of the study prepared by the International Labour Office on the comparative cost of living in Detroit (U.S.A.) and in a number of European towns. The English edition was published early in the year. The Governing Body, by 14 votes to nil, decided to publish French and German editions after the statistical offices of the different countries concerned have had an opportunity of furnishing their observations in writing on the report.

### Report of the Unemployment Committee

The Governing Body then considered the report of its Unemployment Committee on unemployment among salaried employees. By 15 votes to 7 it adopted a resolution recommending to the attention of Governments and industrial communities the following measures in order to limit the discharge of salaried employees and to encourage their re-engagement as far as possible:

(1) In present conditions it is more than ever desirable that the Draft Convention concerning the regulation of hours of work in commerce and offices be ratified, and that in any case pending ratification its principles should be, or continue to be, universally applied.

(2) It is extremely desirable that overtime should be continued only if the technical conditions, seasonal requirements or emergencies make it absolutely necessary.

(3) It is desirable that the measures relating to the application of the weekly rest day and also all regulations or customs relating to holidays should be strictly observed.

(4) It is desirable that salaried employees should be discharged only in case of absolute necessity, and irrespective of the nationality of the salaried employee, and that for preference steps should be taken, whenever the technical, commercial, and financial conditions allow, to reduce the hours of work, or, in cases in which such a measure is possible, to

organize a rotation system. Measures of this kind are also recommended with a view to encouraging the re-engagement of salaried employees.

(5) The question of remuneration should be considered separately in each undertaking, and should be settled as far as possible by means of temporary modifications in existing contracts, efforts being made to maintain the aggregate earnings of the whole body of salaried employees in employment, including those who are re-engaged.

(6) The Committee, without making a complete study of the questions of notice of dismissal and dismissal allowances, recommends, in present circumstances, that the measures in force on these subjects in the different countries be applied in a liberal spirit, account being taken in particular of length of service.

(7) The Committee notes that the present crisis has shown the need for an extension to salaried employees of unemployment insurance and relief schemes. It recommends, in countries in which such an extension has not been carried out, that the question be studied as quickly as possible, care being taken to avoid overlapping between dismissal allowances and insurance or relief payments.

(8) The present crisis has also shown the need for developing the public placing services for salaried employees, and making them more efficient. The Committee recommends that special departments be set up for these classes of workers, and the public employment exchanges co-operate with private agencies which charge no fees.

The Committee also expressed the desire that neither public administrations nor private undertakings should either retain the services of or engage employees who are already in receipt of superannuation payments.

The Governing Body decided to hold its 58th Session at Geneva during the Session of the International Labour Conference.

The 59th Session will be held in Madrid October 24 1932 and following days.

### **Ratification by Spain of International Labour Conventions**

On April 5, 1932, the Spanish Constituent Assembly adopted Bills authorizing the ratification of fourteen International Labour Conventions as follows, thus bringing the number ratified by Spain up to 29:—

*First Session (1919).—*Convention concerning employment of women during the night; Convention fixing the minimum age for admission of children to industrial employment;

Convention concerning night work of young persons.

*Third Session (1921).—*Convention concerning the age for admission of children to employment in agriculture; Convention concerning the rights of association and combination of agricultural workers.

*Seventh Session (1925).—*Convention concerning workmen's compensation for occupational diseases; Convention concerning night work in bakeries.

*Tenth Session (1927).—*Convention concerning sickness insurance for workers in industry and commerce and domestic servants; Convention concerning sickness insurance for agricultural workers.

*Twelfth Session (1929).—*Convention concerning the marking of the weight on heavy packages transported by vessels; Convention concerning the protection against accidents of workers employed in loading or unloading ships.

*Fourteenth Session (1930).—*Convention concerning forced or compulsory labour; Convention concerning regulation of hours of work in commerce and offices.

*Fifteenth Session (1931).—*Convention limiting hours of work in coal mines.

### **Death of Mr. Francois Sokal**

The death occurred on March 31 of Mr. Francois Sokal, representative of the Polish Government on the Governing Body of the International Labour Office. Mr. Sokal had served as President of the Fifteenth Session of the International Labour Conference in 1931. He had been associated with the work of the Organization from its very inception and was one of those who had collaborated in the framing of the Labour Part of the Treaty of Peace on the conclusion of the Great War, which provided for the establishment of the International Labour body as an integral part of the machinery of the League of Nations. He had served in 1924-25 as Minister of Labour and Social Welfare of Poland and was the author of several works on social subjects. Following the deaths a few months ago of Mr. Arthur Fontaine, Chairman of the Governing Body of the International Labour Office, and of Monsignor Nolens, of Holland, who had also been one of the active participants in this branch of the work of the League of Nations, the passing of Mr. Sokal at the age of 49 is keenly felt by his associates in the work at Geneva.

# REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1932

**B**USINESS transacted by the offices of the Employment Service of Canada during the quarter January to March, 1932, showed a decided decline from that effected during the corresponding quarter of 1931 as

there was a loss of nearly 35 per cent, both in vacancies offered and in placements effected in regular and casual employment. All groups, except farming and finance, registered declines in both instances, the major part

of the loss occurring in construction and maintenance, where numerous placements in 1931 were effected in highway construction, whereas this work, though active in 1932, consisted largely of re-placements of men, the quota of labour for the camps having been supplied through the offices during the months previous to those in the quarter un-

der review. Substantial declines also took place in services and logging. The gain in farming, which was noteworthy, was attributable to placements made under the Unemployment and Farm Relief Act and was largely confined to the prairie provinces. Nova Scotia was the only province to show a gain both in vacancies and placements,

while Quebec recorded increased placements only. All remaining provinces showed declines under both comparisons, the most marked taking place in Ontario. The accompanying table gives the vacancies and placements for the Employment Service of Canada by industrial groups in the various provinces during the period, January to March, 1932.

From the chart on page 601, which accompanies the article on the work of the Employment Offices for the month of March, it will be seen that the curve of vacancies and of placements in relation to applications followed an upward trend during January and the first half of the succeeding month, but dropped during the latter half of February, again showing an upward tendency during the first two weeks in March, followed once more by a decline during the latter half of the same month. At no time, however, during the quarter under review did the curves attain the levels recorded during the corresponding period of 1931. During the period January to March, 1932, there was a ratio of 59.5 vacancies and 57.9 placements for each 100 applications for employment, as compared with 67.4 vacancies and 65.9 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,337, of applicants registered 2,248, and of placements effected 1,302, in contrast with the daily average of 2,017 vacancies, 2,992 applications, and 1,971 placements in regular and casual employment during the first quarter of 1931.

During the three months January to March, 1932, the offices of the Employment Service reported that they had made 101,957 references of persons to positions and had effected a total of 97,627 placements, of which 32,640 were in regular employment and 64,989 in casual work. Of the placements in regular employment 23,833 were of men and 8,807 of women, while casual work was found for 57,592 men and 7,397 women. A comparison with the same period of 1931 shows that

149,730 placements were then made, of which 36,063 were in regular employment and 113,667 in casual work. Applications for employment during the period under review were received from 137,631 men and 30,953 women, a total of 168,584, in contrast with the registration of 227,318 during the same period in 1931. Employers notified the Service during the first quarter of 1932 of 100,239 positions, of which 81,980 were for men and 18,259 for women, as compared with 153,289 opportunities for work offered during the corresponding quarter in 1931.

In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of March, 1932.

---

The Hon. Robert Forke, former Minister of Immigration, speaking in the Senate on April 26, on the "return to the land" as a means of alleviating unemployment conditions, suggested that success would be more likely to result from this movement if the unemployed were settled in groups rather than as individuals, "I think something might be done in the way of collective farming," he said; "this is not communism. If you send out inexperienced men and start them on small plots, nine out of ten will fail. Those who have no acquaintance with agriculture will not raise very much during the coming summer, and more than likely none of them will succeed in raising a very good crop the first year. I have thought that, if, instead of men being sent out individually, a large acreage could be found not far from a city—I have Winnipeg in mind more particularly—the land would be subdivided into plots; the people would live close together, and an experienced agriculturist of good executive ability could be put in charge for the coming summer to instruct these people and make them acquainted with agriculture and the growing of crops."

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on April 1, was 7,855, the employees on their payrolls numbering 800,924 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,828, having an aggregate mem-

bership of 181,396 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of April, 1932, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics from 7,855 firms, employment at the beginning of April showed a seasonal falling-off; this exceeded the decline recorded on April 1, 1931, but was smaller than that indicated in the early spring of 1930. The payrolls of the firms co-operating on the date under review aggregated 800,924 persons, compared with 810,885 in the preceding month. The index, based on the 1926 average as 100, stood at 87.5, as compared with 88.7 on March 1, 1932, while on April 1 in the eleven preceding years it was as follows: 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1.

There was an increase on April 1 in manufacturing, especially of pulp and paper, textile and iron and steel products; local transportation and trade (both retail and wholesale) also showed improvement. On the other hand, logging camps reported large seasonal reductions, and construction and communications were slacker.

#### Employment by Economic Areas

All provinces except British Columbia registered reduced employment, the losses in Quebec involving the greatest number of workers.

*Maritime Provinces.*—There was a further decrease in the Maritime Provinces on April 1, when the 567 co-operating employers reduced their payrolls by 3,137 persons to 60,891.

Construction released employees; logging showed important seasonal losses, and activity also declined in communications and transportation. On the other hand, manufacturing, coal mining and trade showed improvement. Employment was in smaller volume than at the beginning of April in 1931, when the reduction had involved fewer workers.

*Quebec.*—Mining, transportation, highway construction and trade afforded more employment in Quebec, while logging reported large seasonal contractions; manufacturing was also slacker, and there were important losses in building construction. Within the manufacturing group, pulp and paper, textile and electric current factories recorded increased employment, but metal, rubber, vegetable food, fur and some other plants showed curtailment. Statements were received from 1,869 firms, with 228,808 employees, as against 232,672 on March 1. The index was lower than on the same date of last year, the curtailment then indicated having been on a smaller scale.

*Ontario.*—The trend of employment was downward in Ontario, where 3,501 employers released 2,282 workers from their staffs, bringing them to 340,280 on April 1. An increase had been registered by the firms making returns for the same date in 1931, and employment then was at a higher level than at the beginning of April of this year. Important seasonal losses were indicated in logging on the date under review, and highway and railway construction also showed curtailment,

while manufactures (notably of iron and steel products), transportation and trade recorded increased employment.

*Prairie Provinces.*—Further seasonal losses were noted in the Prairie Provinces; these involved more workers than those reported on April 1, 1931, when the index was higher than on the date under review. Most of the decline at the beginning of April in the present year took place in construction, but coal mining, retail trade, logging and manufacturing also showed curtailment. The working forces of the 1,145 co-operating employers aggregated 105,261 persons, compared with 107,829 on March 1.

### Employment by Cities

Employment increased in Montreal, Ottawa and Windsor and the Adjacent Border Cities; losses were noted in Hamilton and Winnipeg, while Quebec City, Toronto and Vancouver reported practically no general change.

*Montreal.*—Expansion was shown in Montreal, according to 1,063 firms who reported the addition of 2,174 persons to their staffs, bringing them to 134,224 on April 1. Activity was less than on the same date last year, although the gains then indicated were on a smaller scale. Manufacturing as a whole was slacker than on March 1, iron and steel showing the

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—Continued advances were indicated in British Columbia, according to returns tabulated by the Bureau from 773 firms with 65,684 employees, or 1,890 more than in the preceding month. Curtailment had been noted on April 1 of a year ago, when employment was, however, in greater volume. There were gains on the date under review in manufacturing, especially of lumber products, and in logging and highway and railway construction, while shipping, building construction and trade released help.

Table 1 gives index numbers by economic areas.

greatest loss in this comparison. On the other hand, transportation and construction reported heightened activity.

*Quebec.*—Manufacturing registered a small gain in Quebec City, but transportation was slacker, so that there was practically no change in the general situation. Statements were received from 141 employers with 12,356 workers, almost the same number as in March. Losses were noted on April 1, 1931, when the index was higher than on the date under review.

*Toronto.*—Toronto employers also reported no general change, improvement in manufacturing, transportation and trade being offset by losses in construction. The working forces of the 1,166 co-operating firms totalled 115,851 persons. Employment was not so active as on the same date of last year, when large gains had been indicated.

*Ottawa.*—There was an increase in activity in Ottawa, chiefly in construction and manufacturing; an aggregate payroll of 12,957 workers was reported by the 159 employers whose statistics were tabulated, and who had 12,276 in their last report. The index was lower than in the spring of 1931, although the advance then recorded was on a smaller scale.

**NOTE.**—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Mar. 1.....	88.7	93.1	86.5	91.8	88.2	78.7
April 1.....	87.5	88.3	85.0	91.1	86.1	80.9
Relative Weight of Employment by Districts as at April 1, 1932.....	100.0	7.6	28.6	42.5	13.1	8.2

*Hamilton.*—Manufacturing (especially of electrical apparatus and iron and steel products) and construction afforded less employment in Hamilton, while trade was rather more active. Returns were compiled from 235 firms employing 27,662 persons, or 975 fewer than on March 1. The level of employment was lower than on the same date of last year, when the movement had been favourable.

*Windsor and the Adjacent Border Cities.*—There was a considerable increase in employment in the Border Cities on April 1. Data were received from 134 firms employing 11,532 workers, as against 10,284 in the preceding month. Automobile plants reported a very

large share of the advance, while other industries showed only slight changes. Activity was not so great as in the spring of 1931, although the expansion then indicated was on a rather smaller scale.

**Winnipeg.**—Employment decreased in Winnipeg, where 653 persons were released from the payrolls of the 385 employers furnishing statistics, who reported 35,720 workers. Manufacturing was rather quieter, and communications, transportation and trade were also slacker. On April 1, 1931, a loss had also been noted, but the index then was higher.

**Vancouver.**—No general change occurred in Vancouver, according to 336 firms with 27,408 employees, as compared with 27,392 in the preceding month. There were small increases in lumber mills, construction and transportation, and similar declines in iron and steel plants and trade. Losses had been reported at the beginning of April of last year, but employment was then generally more active.

Index numbers by cities are given in table 2.

### Manufacturing

Further improvement was recorded in manufacturing. The textile, pulp and paper and iron and steel industries showed the greatest

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

—	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver

Relative weight of employment by Cities as at April 1, 1932..	16.8	1.5	14.5	1.6	3.5	1.4	4.5	3.4

gains, but lumber, leather, food and chemical plants also afforded increased employment. On the other hand, curtailment was indicated in tobacco and beverage, non-ferrous metal, electrical apparatus, musical instrument and rubber factories. Statements were received from 4,802 manufacturers, employing 431,707 operatives, as compared with 430,062 in the preceding month. The increase was smaller than that noted on April 1, 1931, when the index was higher than on the date under review.

*Animal Products, Edible.*—Moderate improvement was noted in dairies, and in fish

and meat-packing establishments. There were gains in all except the Prairie Provinces. Statements were tabulated from 200 firms employing 16,466 workers, as against 16,282 at the beginning of March. This increase rather exceeded that recorded on April 1, 1931, but activity was then slightly higher.

*Leather and Products.*—All branches of the leather group reported small increases in personnel, those in footwear factories being most pronounced. The 249 co-operating employers enlarged their payrolls from 18,294 persons in the preceding month, to 18,460 at the beginning of April. A greater advance had been

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by industries as at April 1, 1932.....	100.0	53.9	1.1	5.7	3.1	12.0	11.3	2.7	10.2

indicated on April 1 a year ago, when the index of employment was a point higher.

*Lumber and Products.*—Seasonal expansion was noted in rough and dressed lumber mills, container and other wood-using factories, while the furniture and vehicle groups re-

leased employees. The general improvement was less than that reported on the same date in 1931, when employment was in greater volume. Statistics were compiled from 761 manufacturers, with 30,636 employees, as compared with 30,260 at the beginning of March,

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	Relative weight	April 1, 1932	Mar. 1, 1932	April 1, 1931	April 1, 1930	April 1, 1929	April 1, 1928	April 1, 1927

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

1932. The largest gains were in British Columbia.

*Musical Instruments.*—There was a decline in musical instrument factories, 35 of which employed 1,171 persons, or 224 fewer than on March 1. The reduction took place in Quebec and Ontario. Employment was not so active as at the beginning of April, 1931, the losses then indicated having been rather smaller.

*Plant Products, Edible.*—There was very little change in employment in this group in the period under review, gains in flour and cereal mills and fruit and vegetable packing being offset by losses in bakeries and chocolate and confectionery factories. Returns were tabulated from 384 firms whose payrolls aggregated 26,458 persons. The index was lower than in the spring of last year, when an increase had been noted.

*Pulp and Paper Products.*—The movement in pulp and paper factories, was decidedly upward, while other groups coming under this heading showed little change. According to data received from 551 firms, they employed 53,306 workers, as compared with 52,475 in their last report. Increases were noted in the Maritime Provinces, Quebec, Ontario and British Columbia, but there were losses in the Prairie Provinces. Employment was in less volume than on April 1, 1931, although smaller gains had then been indicated.

*Rubber Products.*—Activity in 43 rubber works declined, 175 persons being released from their staffs, which totalled 11,412. A comparatively slight reduction had also been shown on the same date last year, but the index then was many points higher.

*Textile Products.*—There was a further increase in employment in textiles at the beginning of April, chiefly in silk, knitting and garment factories, while cotton and miscellaneous textile mills were slacker. Greater improvement had been noted on April 1, 1931, when the situation was rather more favourable. Statements were compiled from 797 manufacturers with 84,628 employees, or 815 more than on March 1, 1932. There were general gains, except in British Columbia, those in Ontario being largest.

*Tobacco, Distilled and Malt Liquors.*—Reductions in employment were recorded in this group, 551 persons being released from the working forces of the 150 co-operating establishments, which employed 15,054 workers on the date under review. Most of the decline occurred in Ontario, and in the tobacco division. The index was slightly higher than in the spring of last year.

*Chemicals and Allied Products.*—One hundred and forty-two plants turning out chemicals and allied products reported 8,323 employees, as compared with 8,126 in their last return. All provinces showed slight gains. The index was lower than on April 1, 1931, when a smaller advance had been noted.

*Clay, Glass and Stone Products.*—There was a minor increase in personnel in building material works, 179 of which employed 7,934 persons, as against 7,854 in their last report. This advance involved much the same number of workers as that indicated on the corresponding date in 1931, but the index was then decidedly higher.

*Electric Current.*—A slight decrease was shown in this group, in which 93 plants reported 14,285 employees, or 48 fewer than at the beginning of March. There were gains in Quebec, but losses in Ontario. The level of employment was lower than on April 1, 1931, when improvement had been reported.

*Electrical Apparatus.*—Employment in electrical appliance factories declined, according to the 87 co-operating firms, who reported 13,301 persons on their payrolls, as against 13,672 in their last report. Very little change had been noted on April 1, 1931, when the index was considerably higher.

*Iron and Steel Products.*—Statistics were received from 760 manufacturers in this group, whose staffs were enlarged by 789 workers to 98,408 at the beginning of April. There were considerable gains in the automobile, crude, rolled and forged, heating appliance and machinery industries, but the agricultural implement and structural iron and steel groups released employees. Improvement was shown in Ontario, but elsewhere the movement was downward. More pronounced expansion had been recorded in the same period last year, and the index number was then many points higher than on April 1, 1932.

*Non-ferrous Metal Products.*—Returns tabulated from 129 manufacturers in this group showed that they employed 14,353 persons, as against 14,748 on March 1. Most of the decrease took place in the aluminum division, but all groups within the industry were slacker. Quebec and British Columbia showed curtailment, while improvement was noted in Ontario. The level of employment was lower than in the spring of 1931, when a general advance had been indicated.

*Mineral Products.*—Little general change was reported in these industries at the beginning of April, according to data received from the 101 co-operating establishments, in which 11,417 persons were employed at the beginning of

April. The volume of employment in this group was less than in the same period of last year; reduced activity had then been reported.

### Logging

Continued and larger seasonal losses were shown in logging camps, 236 of which reduced their payrolls from 16,550 men on March 1 to 8,567 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces except British Columbia indicated reductions. Much larger contractions had been reported on April 1, 1931, but the number employed in logging camps was then considerably greater.

### Mining

Coal.—As is customary at the beginning of April, there was, on the whole, a falling-off in employment in coal mines during the period being reviewed; this occurred in the Prairie Provinces, while improvement was noted in the eastern coal fields. Data were received from 87 operators, whose staffs included 25,038 employees, as against 25,224 in their last report. The index was a few points lower than in the spring of last year, although larger declines had then been reported.

Metallic Ores.—Reports were received from 62 firms in this group, employing 15,824 workers, or 70 more than at the beginning of March. A minor gain had also been indicated on the same date in 1931, when the index stood at 138.8, compared with 135.1 at the beginning of April of the present year.

Non-metallic Minerals, other than Coal.—A slight increase was registered in this group; 77 firms employed 4,681 persons, as compared with 4,666 in the preceding month. Larger gains were indicated by the employers furnishing statistics on April 1 of last year, and activity then was much greater.

### Communications

According to information received from 75 communication companies and branches, they reduced their staffs by 338 employees to 24,379 on April 1. The decline took place largely in the Maritime Provinces and Ontario. A smaller falling-off in employment had been recorded on April 1, 1931, and employment was then brisker than on the date under review.

### Transportation

Steam railway and water transportation registered slight declines, while a small increase was indicated in local transportation. Statistics were compiled from 358 employers of 96,524 workers, as compared with 96,460 on March 1. Of the former number, 22,816 persons belonged in the local transportation, 61,957 in the steam railway and 11,751 in the

water transportation division. Employment in transportation was in smaller volume than on the corresponding date last year.

### Construction and Maintenance

Building.—Statements were compiled from 653 building contractors, with 20,387 persons in their employ, or 1,199 fewer than in their last report. Practically all the decline occurred in Quebec. An increase was indicated on April 1, 1931, and the index then was higher.

Highway.—Further curtailment in staffs was noted on highway construction and maintenance; 323 contractors employed 47,006 men, as compared with 48,266 in the preceding month. Quebec and British Columbia reported increased activity, but there were losses in the remaining provinces. Larger reductions had also been shown on April 1 of last year, when the number reported in this work was less than in the period under review.

Railway.—There was a decrease in employment in the construction departments of the railways in the Maritime and Prairie Provinces and Ontario, while gains were indicated in British Columbia. The working forces of the 34 co-operating contractors and divisional superintendents aggregated 23,337 men, whereas in the preceding month they had 24,567 employees. The index number was lower than in the spring of 1931, although a larger recession had then been recorded.

### Services

This group showed a moderate decline, according to 296 firms with 21,768 employees, compared with 21,859 in the preceding month. Laundries and dry-cleaning establishments registered improvement, but hotels and restaurants released help. Very little general change had been reported at the beginning of April, 1931, but employment was then in rather greater volume than on the date under review.

### Trade

There was a gain of 532 persons in the forces of the 852 co-operating wholesale and retail establishments, which employed 81,706 workers on April 1. An increase had also been indicated on the same date a year ago, when the index of employment was some points higher.

### Tables

Index numbers of employment by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of March, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades, or who are idle due to illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The slightly upward employment trend manifest by local trade unions during Feb-

pansion in employment was noted, but the recessions indicated by Alberta, Manitoba and Quebec unions were almost sufficient to counteract those increases. Unemployment for union members in Quebec, Ontario and Manitoba was chiefly responsible for the unfavourable situation shown from March, 1931, the declines registered by Nova Scotia, New Brunswick, Alberta and British Columbia unions being comparatively small. In Saskatchewan, however, the tendency was toward greater activity, though the change was but slight.

Each month a special tabulation is made of unemployment in the largest city in each

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ruary was maintained throughout March, as indicated by the returns received from 1,828 labour organizations with a combined membership of 181,396 persons. Of these, 36,961 were idle on the last day of the month, a percentage of 20.4 in contrast with 20.6 per cent of inactivity in February. Unemployment continued more prevalent than in March a year ago when 15.5 per cent of the membership involved was without employment. The changes in the various provinces from February were not particularly noteworthy, increases and declines in activity offsetting each other to a large extent. In Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia some slight ex-

province with the exception of Prince Edward Island. In Montreal and Vancouver the same percentage of idleness was reported in March as in the preceding month, unemployment in these cities remaining at a rather high level. Saint John and Regina unions showed a substantially improved situation, and in Toronto increases on a much smaller scale were noted. Slight contractions in activity, however, were recorded by Edmonton, Halifax and Winnipeg unions. Regina unions, as in the previous comparison, were afforded considerably more employment than in March last year. Operations for union members in Montreal and Toronto, however, were largely restricted from March, 1931, and in Edmonton and Vancouver

the curtailment evident was noteworthy. In Winnipeg, Saint John and Halifax also declines of minor importance occurred.

As will be noticed from the chart which accompanies this article, there was little change in employment conditions during March from the previous month, the curve continuing in the favourable trend of February, though the projection was very slight. The point reached by the curve, however, at the close of the month was considerably above that shown in the corresponding month last year, indicative of noteworthy unemployment gains during the month reviewed.

Slight losses in employment only, were registered in the manufacturing industries during

March over the previous month, the 485 unions reporting with a membership of 50,949 persons showing 18.4 per cent of the members out of work on the last day of the month, contrasted with 17.4 per cent in February. Activity in the garment trades of Quebec showed some curtailment from February, and among glass workers who, however, formed but a small share of the total membership in the manufacturing industries, the increase in idleness recorded was pronounced. An unfavourable employment balance was also maintained by fur, leather, textile and wood workers, bakers and confectioners, and meat cutters and butchers. Papermakers, printing tradesmen, and iron and steel workers all reported fractional gains in activity over February. Among cigar makers, and hat and cap workers the situation was substantially improved, and somewhat better conditions prevailed for general labourers. A noteworthy drop in the volume of work available was reflected in the manufacturing industries as compared with March, 1931, when 9.2 per cent of inactivity was recorded; the garment, and iron and steel trades showing particularly heavy contractions of activity, augmented by important employment losses among papermakers, printing tradesmen, general labourers, and wood and fur workers. On the other hand, a much better employment volume was afforded cigar makers, and textile and glass workers than in March a year ago.

Employment for coal miners during March showed some curtailment from the previous month, the 51 unions from which reports were received with 18,214 members indicating 9.9 per cent of inactivity contrasted with 6.9 per cent in February. This unemployment increase shown over February was confined wholly to the Province of Alberta, British Columbia mines showing nominal improvement in conditions, while in Nova Scotia the same percentage of idleness was reported in both months compared. The situation in coal mining, as a whole, remained unchanged from March, 1931, when the percentage of idleness also stood at 9.9. Alberta miners were afforded the same volume of activity as in March last year, while in Nova Scotia and British Columbia some slight falling off in employment was noted during the month reviewed.

After many months of uninterrupted declines in building and construction operations, the trend of activity at the close of March was favourable, though unemployment still remained at a very high level. For March, returns were tabulated from a total of 248 unions of building tradesmen with 24,565

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

members, 15,292, or 62.3 per cent, of whom were without employment on the last day of the month, contrasted with 65.3 per cent in February. The most appreciable gains in employment from February were recorded by carpenters and joiners and electrical workers, increases on a much smaller scale being registered by bricklayers, masons and plasterers, painters, decorators and paperhangers, and bridge and structural iron workers. On the other hand, plumbers and steamfitters, granite and stonecutters, and tile layers, lathers and roofers reported a noteworthy drop in the volume of work afforded as compared with February, and employment for hod carriers and building labourers was somewhat curtailed. A considerable increase in slackness was registered in the building trades over March, 1931, when 45.7 per cent of the membership represented was without work; hod carriers and building labourers alone showed a better situation during the month reviewed, while the remaining trades reflected extensive employment losses.

The transportation industries, with 795 unions reporting a membership of 63,201 persons in March, indicated an unemployment percentage of 12.3 at the close of the month, compared with percentages of 13.5 in February and 10.9 in March last year. Steam railway employees, whose returns comprised about 82 per cent of the entire group membership reporting, and navigation workers, were somewhat better engaged than in February, while among street and electric railway employees, and teamsters and chauffeurs fractional contractions of activity were shown. Steam railway employees, navigation workers, and teamsters and chauffeurs all participated in the slightly unfavourable employment movement shown as compared with March, 1931. Street and electric railway employees, on the other hand, reported nominal gains in activity.

Retail clerks during March reported a drop in the volume of work available over both the preceding month and March last year, according to the returns tabulated from 4 unions, combining a membership of 1,176 persons. Of these 3.4 per cent were unemployed on the last day of the month in contrast with 0.7 per cent of inactivity in February and with 1.8 per cent in March, 1931.

From associations of civic employees in March, 72 reports were tabulated, covering

8,604 members, 474 of whom were reported idle, a percentage of 5.5 compared with percentages of 6.3 in February and 1.5 in March last year.

The employment tendency in the miscellaneous group of trades during March was toward lessened activity, though the change from February was fractional only. This was manifest by the returns tabulated from 126 unions with an aggregate of 5,243 persons, 1,128 or 21.5 per cent of whom were reported as unemployed on the last day of March, compared with 20.6 per cent in February. Unemployment for stationary engineers and firemen was the chief factor in this slightly unfavourable movement, shown during March, though employment for unclassified workers and theatre and stage employees also declined slightly. On the contrary, hotel and restaurant employees and barbers reported a somewhat better situation than in February. In the miscellaneous group of trades, compared with the returns for March, 1931, when 17.0 per cent of the members reported were idle, unclassified workers alone indicated better employment conditions during the month reviewed, the gains for these workers being substantial; while of the recessions among the remaining tradesmen those recorded by stationary engineers and firemen were the most extensive.

Among fishermen all members were reported at work in March as in the preceding month, while in March a year ago 4.0 per cent of inactivity was registered.

Lumber workers and loggers, with 4 unions embracing 805 members in March, reported 165 of their members idle on the last day of the month, a percentage of 20.5, in contrast with 21.2 per cent of unemployment in February. A much improved situation was shown from March last year, when 34.0 per cent of the members recorded were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for March of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for March, 1932

The volume of business transacted by the offices of the Employment Service of Canada during the month of March, 1932, showed an increase of 5 per cent in the average daily placements over those of the preceding period, but a decline of more than 20 per cent when a comparison was made with the average daily placements effected during the corresponding period of 1931. Substantial gains over last month were reported in services and farming, with a small increase also registered in manufacturing. All other groups showed declines, except transportation, which remained unchanged. In comparison with March, 1931,

being made semi-monthly. As may be seen from the graph, the curve, both of vacancies and of placements in relation to applications, rose during the first half of the month, but each recorded a decline during the latter half of the period under review, and the close of March were, respectively, 5 and 4 points below the levels shown at the close of March a year ago. The ratio of vacancies to each 100 applications was 65.1 during the first half and 62.6 during the second half of March, 1932, in contrast with the ratios of 68.3 and 67.8 during the corresponding periods of 1931. The ratios of placements to each 100 applica-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications \_\_\_\_\_ Vacancies - - - - - Placements o-o-o-o-o

the loss shown was mainly attributable to a large reduction in placements in construction and maintenance, followed by a marked decline in services. Losses in the remaining industrial divisions were partly offset, however, by a noteworthy gain in farming, due to increased placements in this group under the Unemployment and Farm Relief Act.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations

tions during the periods under review were 63.3 and 60.8, as compared with 66.8 and 65.2 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1932, was 1,411, as compared with a daily average of 1,781 during the corresponding month a year ago and with 1,338 recorded daily in February, 1932.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,211, in comparison with 2,617 in March,

\*42 Placements effected by offices since closed.

1931. Applications for work during the preceding month of 1932 averaged 2,223 daily.

The average number of placements made daily by the offices of the Service during March, 1932, was 1,371, of which 429 were in regular employment and 942 in work of a week's duration or less, as compared with a total daily average of 1,306 during the preceding month. Placements in March a year ago averaged 1,727 daily, being 421 in regular and 1,306 in casual employment.

During the month of March, 1932, the offices of the Service referred 35,859 persons to vacancies and effected a total of 34,275 placements. Of these, the placements in regular employment were 10,719, of which 7,560 were of men and 3,159 of women, while placements in casual work totalled 23,556. The number of vacancies reported by employers was 28,586 for men and 6,689 for women, a total of 35,275, while applications for work numbered 55,271, of which 45,127 were from men and 10,144 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1932 (3 months).....	32,640	64,989	97,629

#### NOVA SCOTIA

During March orders received at employment offices in Nova Scotia called for nearly 4 per cent more workers than in the preceding month, but over 11 per cent less than during the corresponding month of last year. There was a gain of over 5 per cent in placements when compared with February, but a loss of nearly 11 per cent in comparison with March, 1931. The only groups to show any gain in placements over March of last year were construction and maintenance and mining, the increase in the latter being nominal only. Of the declines in other groups, that in services was the largest. Industrial divisions in which most of the placements were made during the month were: construction and maintenance, 247; trade, 30; and services

349, of which 250 were of household workers. During the month 45 men and 67 women were placed in regular employment.

#### NEW BRUNSWICK

Orders listed at employment offices in New Brunswick during March called for nearly 4 per cent less workers than in the preceding month and nearly 27 per cent less than during the corresponding month of last year. Placements also declined over 3 per cent when compared with February and 25 per cent in comparison with March, 1931. The decrease in placements from March of last year was due to reductions under construction and maintenance and services, as the changes in all other divisions were nominal only. The majority of placements made during the month were in construction and maintenance and services, there being 86 in the former and 420 in the latter. Included in the placements under the service group were 322, of household workers. Placements in regular employment numbered 67 of men and 47 of women.

#### QUEBEC

Opportunities for employment as indicated by orders received at employment offices in the Province of Quebec during March were over 46 per cent better than in the previous month and nearly 2 per cent above the corresponding month of last year. There was a gain also in placements of over 50 per cent in comparison with February and of over 17 per cent when compared with March, 1931. The increase in placements over March of last year was due to a gain in services although manufacturing and transportation also showed improvement. The gains in these divisions, however, were partly offset by losses in other groups, those in logging, construction and maintenance and trade being the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing 102; construction and maintenance 210; and services 1,186, of which 638 were of household workers. There were 452 men and 598 women placed in regular employment during the month.

#### ONTARIO

There was an increase of over 3 per cent in the number of positions offered through employment offices in Ontario during March when compared with the preceding month, but a loss of over 36 per cent in comparison with the corresponding month of last year. Similar percentages of change were indicated in place-

ments under both comparisons. The large decline in placements from March of last year was attributable to fewer workers being sent to highway construction camps, as although many men had been sent to this work during the month under review, the number was not so great as in March, 1931, the camps having been filled earlier during the past winter. There was also a large decrease in placements in the services division, with somewhat smaller declines in manufacturing, trade, transportation and farming. Logging was the only group to show any gain of importance. Placements by industrial divisions included: manufacturing 561; logging 400; farming 346; transportation 69; construction and maintenance 13,293; trade 298; and services 3,123, of which 1,954 were of household workers. Placements in regular employment numbered 2,374 of men and 1,270 of women.

#### MANITOBA

Employment opportunities, as indicated by orders received at offices in Manitoba during March, were 12 per cent better than in the preceding month and about 50 per cent greater than during the corresponding month of last year. There was a gain of over 10 per cent in placements when compared with February and of over 51 per cent in comparison with March, 1931. The substantial gain in placements over March of last year was due to work provided on highway construction and farms under the Unemployment and Farm Relief Act. The only decrease of importance was in services, but small declines were also shown in trade and manufacturing. Placements by industrial divisions included: farming 1,070; construction and maintenance, 1,944; trade 45; and services, 939, of which 697 were household workers. There were 1,898 men and 370 women placed in regular employment during the month.

#### SASKATCHEWAN

During the month of March there were over 14 per cent more positions offered through employment offices in Saskatchewan than in the preceding month, but over 23 per cent less than during the corresponding month of last year. Placements were nearly 8 per cent higher than in February but nearly 23 per cent less than in March, 1931. Reduced placements under construction and maintenance, with smaller declines in logging and services, accounted for the decrease in comparison with March of last year. These losses were, however, partly offset by increased farm placements and a small gain in trade. The

changes in other groups were of minor importance only. Industrial divisions in which most of the placements were effected during the month were: manufacturing 41; farming 452; transportation 22; construction and maintenance 583; trade 67; and services 641; of which 441 were of household workers. During the month 622 men and 361 women were placed in regular employment.

#### ALBERTA

There was a decrease of nearly 3 per cent in the number of positions offered through employment offices in Alberta during March, when compared with the preceding month, and of over 18 per cent in comparison with the corresponding month of last year. Placements also showed similar percentages of change under both comparisons. There were large reductions in placements under construction and maintenance and logging in comparison with March of last year, which were mainly responsible for the decline for the province as a whole. Fewer placements were, however, also made in services, mining and manufacturing. The only gain of importance was in farming, but trade also showed slight improvement. Placements by industrial divisions included: manufacturing 25; logging 46; farming 486; construction and maintenance 3,117; trade 27; and services 567, of which 353 were of household workers. Placements in regular employment numbered 1,111 of men and 270 of women.

#### BRITISH COLUMBIA

The demand for workers, as indicated by orders received at employment offices in British Columbia during March, was over 6 per cent greater than in the preceding month and nearly 5 per cent above the corresponding month of last year. Placements also showed a gain of over 7 per cent when compared with February and of over 5 per cent in comparison with March, 1931. The increase in placements over March of last year was due to relief work provided on highway construction as all other industrial divisions showed declines, those in logging and services being the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing 24; logging 21; farming 88; construction and maintenance 2,463; trade 24; and services 576, of which 362 were of household workers. There were 991 men and 176 women placed in regular employment during the month.

### Movement of Labour

During the month of March, 1932, the offices of the Employment Service of Canada made 10,719 placements in regular employment, 3,770 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 210 were granted the Employment Service reduced transportation rate, 187 going to points within the same province as the despatching office, and 23 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate from Ontario centres during March totalled 58, all of which were to provincial points. For employment within their respective zones Port Arthur despatched 34 bushmen, Fort William 4 bushmen, and Hamilton 1 stationman. The Port Arthur zone was also the destination of 2 mine workers travelling from Sudbury. In addition, the Fort William office granted certificates for reduced transportation to 9 bush workers bound for points in the Fort Frances zone. Travelling from Niagara Falls 5 riggers were conveyed to Timmins, while from North Bay 3 highway construction workers proceeded to Kingston.

In Manitoba 85 certificates for reduced transportation were granted during March, 63 provincial and 22 interprovincial. Provincially the Winnipeg office transferred 3 farm domestics and 3 hotel workers to Brandon, and 55 farm hands and 2 mine labourers within its own zone. The movement of labour outside the province also originated at Winnipeg, from which centre 3 farm hands, 1 café cook and 1 domestic were conveyed to Port Arthur,

and 16 farm hands and 1 farm domestic to various rural points in Saskatchewan.

Offices in Saskatchewan despatched 16 workers at the special reduced rate during March, all to provincial employment. Of these, 12 travelled on certificates issued at Regina to points within the same zone, and included 7 school teachers and 5 farm hands, while from Moose Jaw 1 school teacher and 1 farm hand were conveyed to employment within the territory covered by that zone office. The balance of this provincial movement was from Saskatoon, 1 farm hand and 1 farm housekeeper proceeding from this centre to North Battleford.

By offices in Alberta 48 transfers at the reduced rate were effected during March, 47 of which were to centres within the province. The Edmonton office assisted in the despatch of 1 farm hand and 1 highway construction timekeeper to Calgary, 1 farm hand to Lethbridge, and of 26 farm hands, 3 farm household workers, 4 bush workers, 1 miner, 1 truck driver, and 1 cook to employment within the Edmonton zone. Travelling from Calgary 4 farm hands were destined to Drumheller, 2 farm domestics to Lethbridge, 1 farm household worker to Edmonton, and 1 farm hand to a point within the Calgary zone. The 1 interprovincial transfer was of a farm worker journeying from Edmonton to Saskatoon.

The movement of labour in British Columbia during March comprised the transfer of 3 workers, the Vancouver office granting certificates to 1 engineer and 1 cleaner and presser bound for Nelson, and to 1 hotel cook travelling to Vernon.

Of the 210 persons who took advantage of the Employment Service reduced transportation rate during March, 76 were conveyed by the Canadian National Railways, 130 by the Canadian Pacific Railway, and 4 by the Northern Alberta Railway.

### (4) Building Permits issued in Canada during March, 1932

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was \$3,323,602; this was an increase of \$745,005 or 28.9 per cent over the February total of \$2,578,597, but a decrease of \$6,625,377 or 66.6 per cent, as compared with the aggregate of \$9,948,979 reported for the same month in 1931. Building costs, as shown by the Bureau's index number of wholesale prices of building materials, were, however, lower than in 1931 and any other year since 1920.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 400 permits for dwellings valued at over \$900,000

and some 1,100 permits for other buildings estimated to cost approximately \$2,200,000. In addition, three centres reported that they had authorized five engineering projects valued at approximately \$128,000. In February, authority was given for the erection of some 300 dwellings and nearly 800 other buildings, estimated at approximately \$1,100,000 and \$1,400,000, respectively, while an engineering project, valued at \$20,495, was also reported.

New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia reported increases in the value of the building authorized during March as compared with the preceding month. The greatest gains were those of

\$584,320 or 49·8 per cent in Quebec, and \$180,899 or 483·4 per cent in Saskatchewan. Of the declines in the remaining provinces, that of \$93,968 or 52·4 per cent in Alberta was greatest.

As compared with March, 1931, all provinces recorded decreases; the largest reduction was that of \$2,419,029 or 71·8 per cent in Quebec.

Of the larger cities, Montreal registered a gain as compared with the preceding month, but a falling-off as compared with March of last year. Toronto, Winnipeg and Vancouver showed declines in both comparisons.

Of the smaller centres, Sydney, Three Rivers, Belleville, Fort William, Galt, Guelph, Kingston, Ottawa, Peterborough, Sandwich, Woodstock, St. Boniface, Moose Jaw, Nanaimo, Prince Rupert and North Vancouver reported higher totals than in either February, 1932, or March, 1931.

*Cumulative record for first quarter, 1932.*—The following table gives the value of the building authorized by 61 cities during March, and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index number of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

Year	Value of permits issued in March	Value of permits issued in First Quarter	Indexes of value of permits issued in First Quarter (1926=100)	Average indexes of wholesale prices of building materials in First Quarter (1926=100)
	\$	\$		
1932.....	3,323,602	8,664,128	38·5	79·3
1931.....	9,948,979	24,746,094	110·0	83·3
1930.....	13,356,787	29,493,262	131·1	96·6
1929.....	24,068,018	42,950,228	190·9	100·1
1928.....	15,128,413	33,163,338	147·4	96·6
1927.....	11,713,640	25,028,353	111·3	97·0
1926.....	10,634,491	22,493,574	100·0	102·0
1925.....	8,631,627	19,931,015	88·2	102·9
1924.....	9,493,620	18,047,999	80·2	112·2
1923.....	9,658,950	19,478,119	86·6	110·6
1922.....	10,615,531	18,680,173	83·0	108·0
1921.....	7,290,589	13,569,512	60·3	135·7
1920.....	8,736,675	18,909,986	84·1	139·4

The aggregate value of the building permits issued in the first quarter of 1932 was less than in the same period in any of the years since 1920, but, as already stated, the wholesale prices of building materials have this year been considerably lower than in the same period in any of the last twelve years.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. The summary showing the employment situation during March, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

Employment during March showed a substantial improvement which affected most industries. It was most pronounced in the building, coal mining, general engineering and textile industries (except jute manufacture), in the clothing trades (except boot and shoe manufacture), in pottery, glass bottle, metal goods, motor vehicle and cycle manufacture, in the woodworking, printing and distributive trades, and in hotel and boarding house service. On the other hand there was a decline in employment in pig iron manufacture and constructional engineering, in the boot and shoe, and rubber industries, and in dock and harbour service.

The improvement was experienced in all divisions of the country, being most marked in the North-Western division. Employment was still very slack, however, in the South of England and very bad in all other areas. In the Midlands and the North of England and also in Northern Ireland employment was better than it was a year ago.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at March 21, 1932 (including those temporarily stopped as well as those wholly unemployed), was 20·8, as compared with 22·0 at February 22, 1932, and with 21·5 at March 23, 1931. The percentage wholly unemployed at March 21, 1932, was 17·5, as compared with 18·2 at February 22, 1932, while the percentage temporarily stopped was 3·3, as compared with 3·8. For males alone, the percentage at March 21, 1932, was 24·1, and for females 12·5; at February 22, 1932, the corresponding percentages were 25·0 and 14·2.

At March 21, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,042,444 wholly unemployed, 422,676 temporarily stopped, and 102,212 normally in casual employment, making a total of 2,567,332. This was 133,841 less than a month before, and 12,786 less than a year before. The total included 2,073,370 men, 65,290 boys, 380,965 women and 47,707 girls.

The 2,042,444 wholly unemployed included 829,882 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years, and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after 12th November, 1931, had paid at least 10 contributions since the 156th day of benefit); 901,020 insured persons with applications for transitional payments; 192,074 insured persons not in receipt of insurance benefit or transitional payments, and 119,468 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at March 21, 1932, was 2,627,076.

### United States

According to computations made by the Bureau of Labour Statistics of the United States Department of Labour, employment decreased 1·5 per cent in March, 1932, as compared with February, 1932, and earnings decreased 2·4 per cent. This computation is based on returns made by 60,896 establishments in 16 major industrial groups having in March 4,564,141 employees whose combined earnings in one week were \$97,884,467. Increased employment was reported in three of these industrial groups. Anthracite mining reported a gain of 3·5 per cent in number of employees coupled with an increase of 6·7 per cent in earnings, while the retail trade and dyeing and cleaning groups reported smaller increases in employment combined with slight decreases in earnings. The remaining thirteen groups reported decreases in both employment and earnings from February to March.

In a statement in its official publication, the *Monthly Survey of Business*, of April 21, the American Federation of Labour estimated the number of unemployed in the United States at over 8,000,000 at that date.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring

adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or

employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper

books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrear; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

## DEPARTMENT OF PUBLIC WORKS

**Contracts in Group "A" (Construction, Remodelling, Etc.)**

Painting of south leaf of the Bascule Bridge over Burlington Channel, near Hamilton, Ontario. Name of contractors, The C. J. Pott Co., Ltd., Toronto, Ont. Date of contract, April 25, 1932. Amount of contract, \$5,050. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages, not less than	Hours of labour, not more than
	per hour	per day
Steel bridge painters.....	\$0 60	8
Paint spraying machine operator....	0 60	8
Air compressor operator.....	0 60	8
Air operated bridge cleaning tool operator.....	0 50	8
Sand blasting machine operator....	0 50	8
Carpenters.....	0 90	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 70	8
Driver, team and wagon.....	1 00	8
Teamsters.....	0 40	8

Purchase, demolition and removal of Dominion Government buildings, Windsor, Ontario. Name of contractors, Runnymede Wrecking and Salvage Co., Toronto, Ont. Date of contract, March 29, 1932. Amount of contract, \$240. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages, not less than	Hours of labour, not more than
	per hour	per day
Carpenters and joiners.....	\$1 00	8
Labourers.....	0 45	8
Driver, horse and cart.....	0 75	8
Driver, team and wagon.....	1 00	8
Motor truck driver.....	0 50	8
Steam hoist engineer, 1 drum (when used in building trades).....	1 10	8
Steam hoist engineer, 2 drums and up (when used in building trades).....	1 25	8
Steam hoist engineer, 1 drum (when used in excavating work).....	1 02	8
Steam hoist engineer, 2 drums and up (when used in excavating work).....	1 18	8

Construction of repairs, renewals, etc. to the hull, housing, crane, turn-table, anchor casings, etc., of Dredge P. W. D. "No. 110," Lauzon, P.Q. Name of contractors, Davie Shipbuilding & Repairing Co., Ltd., Lauzon, P.Q. Date of contract, April 6, 1932. Amount of contract, \$8,125. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages, not less than	Hours of Labour, not more than
	per hour	per day
Platers.....	\$0 60	8
Riveters.....	0 50	8
Rivet holders.....	0 40	8
Iron caulkers.....	0 50	8
Flangers.....	0 50	8
Fitters.....	0 50	8
Machinists.....	0 55	8
Blacksmiths.....	0 60	8
Electric welders.....	0 60	8
Carpenters and joiners.....	0 50	8
Wood caulkers.....	0 50	8
Painters.....	0 45	8
Labourers.....	0 35	8
Riggers.....	0 50	8
Teamsters.....	0 35	8

Repairs to wooden dump Scows Nos. 10 and 11, Montreal, P.Q. Name of contractors, Canada Marine Works, Montreal, P.Q. Date of contract, April 12, 1932. Amount of contract, \$13,590. The General Fair Wages Clause was inserted in the contract.

Dredging at Brooklyn, N.S. Name of contractors, The Federal Dredging Co., Ltd., Ottawa, Ont. Date of contract, May 2, 1932. Amount of contract approximately \$15,695.40. The General Fair Wages Clause was inserted in the contract.

**Post Office Department**

Following is a statement of payments made in April, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
	\$ cts.
Making metal dating stamps and type, brass crown seals, cancellors, etc	
Pritchard-Andrews Co., Ltd., Ottawa, Ont..	261 50
Making and repairing rubber stamps, dater, etc.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont..	135 03
Capital Rubber Stamps Works, Ottawa, Ont..	17 44
Making and supplying Letter Carriers' Uniforms.	
Samuel Dorfman, Quebec, P. Q.....	585 80
Horn Bros. Woolen Co., Ltd., Lindsay, Ont..	1,670 55
Kaufman Rubber Co., Kitchener, Ont.....	104 31
Hamilton Uniform Cap Co., Hamilton, Ont..	1,708 70
Wm. Scully, Ltd., Montreal, P. Q.....	314 50
Mail Bag Fittings.	
F. W. Carling, Ottawa, Ont.....	100 00
Pritchard-Andrews Co. of Ottawa, Ltd.....	201 40
Scales.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont..	944 70
Letter Boxes, etc.	
F. H. Plant, Ltd., Ottawa, Ont.....	784 00
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa.....	353 30
Amedee Lesieur, Montreal, P. Q.....	5,830 00
Ink, etc.	
J. E. Poole Co., Toronto, Ont.....	379 80
Pritchard-Andrews Co. of Ottawa, Ltd.....	98 50
Erection of Mail Accelerator.	
Mahaffy Iron Works Ltd., Toronto, Ont.....	4,928 38

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

VANCOUVER, B.C.—CERTAIN BAKERIES AND THE BAKERY AND CONFECTIONERY WORKERS INTERNATIONAL UNION OF AMERICA, LOCAL 468.

Agreement to be in effect from February 1, 1932 to March 1, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1931, page 1035, with the following exceptions:

A wage scale has been established. The wages per week are: bench hands \$27.50, doughmen and ovenmen \$32, helpers \$18 for first year and \$20 for second year, apprentices \$12 during first half year to \$24 during fourth year, shippers \$30, finishers and cake-wrappers \$16 and \$18.

One apprentice allowed for every three journeymen employed.

### Manufacturing: Textiles and Clothing

MONTREAL, QUEBEC.—THE ASSOCIATION OF MANUFACTURERS OF CLOAKS, SUITS AND LADIES' GARMENTS OF THE CITY OF MONTREAL AND THE INTERNATIONAL LADIES GARMENT WORKERS' UNION AND THE MONTREAL JOINT COUNCIL OF THE CLOAK, SUIT AND DRESSMAKERS' UNION, COMPOSED OF CUTTERS LOCAL NO. 19, OPERATORS AND FINISHERS LOCAL NO. 43, LOCAL NO. 112, AND PRESSERS LOCAL NO. 61.

Agreement (signed following the strike which was noted in the LABOUR GAZETTE, March, 1932, page 288) to be in effect from February 15, 1932, to January 1, 1934, and thereafter from year to year subject to notice.

This agreement is similar to that previously in effect and noted in the LABOUR GAZETTE, May, 1930, page 580 and April, 1930, page 447, with some changes in working conditions and with the following wage scale, which is approximately 10 per cent lower than the scale previously in effect: For piece work the basis will be the payment for a week's work by a workman of average ability and efficiency of \$40 to operators and pressers, \$35 to an under presser, \$20 to a piece presser. For week work, sample makers will be paid \$36.

The desired standard of weekly wages for the following classes of employees of average ability and efficiency will be \$40 to a cutter, \$27 to a trimmer and \$15 to a button sewer.

When the union cannot supply help required, non-union help may be employed but such help is not to become part of the regular staff of the shop.

The regular hours are unchanged at 44 per week.

No overtime to be allowed in the four months considered as slack seasons.

### Construction: Buildings and Structures

CANADIAN AUTOMATIC SPRINKLER ASSOCIATION AND THE CANADIAN AUTOMATIC SPRINKLER FITTERS' UNION, LOCAL NO. 379 OF THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS.

This agreement covers the installation of automatic sprinkler systems or systems for fire extinguishing purposes throughout Canada.

Agreement to be in effect from May 1, 1932, to April 30, 1934, and thereafter from year to year subject to notice.

The agreement is the same as that previously in effect and summarized in the LABOUR GAZETTE, July, 1929, page 806, and July, 1927, page 790, with the following exceptions:

Wages: 85 cents per hour for work within a radius of ten miles of journeymen's home town and \$1.05 if required to work outside this area (The former rates were \$1 and \$1.25 per hour.)

One improver allowed to each shop employing three journeymen and one additional improver to each additional journeyman but not more than three improvers in any one shop. Before being classed as journeymen improvers must have served five years at the trade and pass an examination.

WINDSOR AND VICINITY, ONTARIO.—ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 773.

Agreement to be in effect from May 1, 1932, to April 30, 1933.

The agreement which came into effect May 1, 1930, and was summarized in the LABOUR GAZETTE, June, 1931, page 710 was continued in effect until December 15, 1931, when it was verbally agreed to reduce the wage rate from \$1.37½ to \$1.25 per hour. The new agreement is the same as the 1930 agreement with the exception of the wage rate which is \$1.25 per hour.

### Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS STEAMSHIP COMPANIES AND THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from April 11, 1932, to December 31, 1932.

With certain exceptions noted below, this agreement is similar to the one previously in effect, which was noted in the LABOUR GAZETTE, May 1931, June 1930, May 1929, and May 1928, the principal clauses having already been summarized in the issue of June and October, 1927.

The minimum number of men per gang remains at 16, but the company is to be the judge of the number of extra men required in any particular cases.

A joint committee to be appointed to discuss grievances. Provision for arbitration, etc. are similar to those in the previous agreement.

The regular hours of work remain at 10 per day.

The wage rates have been reduced approximately 10 per cent and are as follows: For ordinary cargoes, 59 cents per hour for day work, 69 cents for work between 7 p.m. and 11 p.m. and 79 cents from midnight to 5 a.m. For work with nitrate, bulk sulphur, full cargoes of china clay and fertilizer, shifting bunker coal and handling cargoes in refrigerators which are to be transported at or below freezing temperature, also for grain trimming and bagging and for work done between deck where there is grain running in a hatch connected with the open deck, the wage rate will be 72 cents per hour for day work, 82 cents for work between 7 p.m. and 11 p.m. and 92 cents for work between midnight and 5 a.m.

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

Agreement to be in effect from April 18, 1932, to March 31, 1933.

With the exception of the change in wages noted below, this agreement is similar to the one which was in effect to March 31, 1932, and which was noted in the LABOUR GAZETTE, June 1930, May 1929 and May 1928, the main clauses having been summarized in the issue for June 1927.

The regular hours remain at 10 per day.

The wage rates have been reduced approximately 10 per cent and are as follows: the regular rate is 59 cents per hour for day work, 69 cents between 7 p.m. and 11 p.m. and 79 cents between midnight and 5 a.m. For work in holds of steamers in which bulk sulphur or bulk fertilizer has been stowed and where the old wood is being used in whole or in part, the rate will be 80 cents per hour for day work, 90 cents for night work and \$1.20 between midnight and 5 a.m. But in these cases, if new wood is used, the regular rate will be paid.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$7.22 for April as compared with \$7.27 for March; \$8.86 for April, 1931; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. The most important decrease was a substantial fall in the price of eggs, while the prices of beef, veal, pork, lard, rice, evaporated apples, prunes, granulated sugar and potatoes were also lower. A substantial increase occurred in the price of butter. Including the cost of fuel and rent with that of foods the total budget averaged \$17.09 at the beginning of April as compared with \$17.16 for March; \$19.18 for April, 1931; \$21.53 for April, 1930; \$21.30 for April, 1929; \$20.66 for April, 1922; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. Fuel was slightly lower, due to decreases in the prices of anthracite coal. Rent was unchanged in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 continued to decline, being 68.4 for April, as compared with

69.1 for March; 74.4 for April, 1931; 91.7 for April, 1930; 94.5 for April, 1929; 98.4 for April, 1922; 164.3 for May, 1920 (the peak); and 64.0 for April, 1914. One hundred and twenty-two prices quotations were lower, sixty-three were higher and three hundred and seventeen were unchanged.

In the classification according to chief component materials five of the eight main groups declined, two advanced and one was unchanged. The groups which declined were: the Animals and their Products group, because of lower quotations for furs, hides, leather, hogs, calves and eggs; the Fibres, Textiles and Textile Products group, because of lower prices for raw cotton, denim, raw silk and raw wool; the Wood, Wood Products and Paper group, due to reduced quotations for lumber and pulp; the Non-Ferrous Metals and their Products group, mainly because of lower prices for electrolytic copper, lead, silver, tin, zinc and solder; and the Non-Metallic Minerals and their Products group, due to declines in the prices of both anthracite and domestic coal which more than offset higher prices for brick, coal tar and cement. The Vegetables and Vegetable Products group and the Iron and its Products group were slightly higher, the former because of advances in the prices of barley, oats, peas, bran, shorts, onions and carrots, which more than offset lower prices for rye, wheat, flour, oatmeal, rolled oats and

(Continued on page 620)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236.

(Continued from page 612)

potatoes, and the latter because of higher quotations for steel tank plates, hot rolled annealed steel sheets, scrap iron and steel, which more than offset lower prices for automobile body plates and galvanized steel sheets. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of declines in the prices of flour, potatoes, fresh and cured meats, butter and eggs, which more than offset advances in the prices of bran, shorts, rubber tires, coffee and matches, and the latter because of reduced quotations for flax, rye, wheat, hogs, calves, leather, copper, tin and zinc, which more than offset advances in the prices of barley, oats, peas, bran, steers, lambs and cement.

In the grouping according to origin lower prices for flax, wheat, eggs, hogs, lambs, copper, tin and silver caused a decline in the raw and partly manufactured goods group.

Fully and chiefly manufactured goods were also lower, due to declines in the prices of flour, cured meats, butter, leather, boots and shoes, and copper wire bars. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

## EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April, of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quantity for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and

fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1920, quarterly from 1921 to 1930 and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to

1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices were slightly lower during the month, sirloin steak being down from an average price of 25.3 cents per pound in March to 24.9 cents in April, round steak from 20.4 cents per pound to 20.1 cents, and shoulder roast from 13.7 cents per pound to 13.4 cents. These prices compare with 29.3 cents per pound for sirloin steak, 24.5 cents for round steak and 17 cents for shoulder roast in April, 1931. Veal prices were lower in most localities, averaging 14.6 cents per pound as compared with 15.6 cents in March. Fresh leg roast of pork was down from an average of 15.7 cents per pound in March to 15.3 cents in April. The prices of breakfast bacon and ham were also lower, the former being down from an average of 22 cents per pound to 21.1 cents and the latter from 37.5 cents per pound to 36.7 cents. Lard also was lower in most localities, the price being down in the average from 11.8 cents per pound in March to 11.5 cents in April. The price in April, 1931, was 16.7 cents per pound.

Eggs showed a substantial seasonal fall, the decline, however, being much more pro-

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%. † Revised.

nounced in the western provinces. Fresh were down from an average of 32.8 cents per dozen in March to 24.7 cents in April and cooking from 25.7 cents per dozen to 19.9 cents. Milk prices were again lower at an average of 10 cents per quart. Decreased prices were reported from Truro, Charlottetown, Sherbrooke, St. Hyacinthe, St. John's, Belleville, London, Sarnia, Sault Ste. Marie and Edmonton. Butter prices were substantially higher, following an upward movement in wholesale prices on the announcement that stocks in cold storage had been substantially reduced. Dairy butter advanced from an average price of 20.4 cents per pound in March to 25.9 cents in April and creamery from 23.7 cents per pound to 31.1 cents. Prices in April, 1931, were 33.2 cents per pound for dairy and 37.1 cents per pound for creamery.

Bread was unchanged at an average price of 6 cents per pound. Onions advanced from an average of 4.4 cents per pound in March to 5.2 cents in April. Potatoes were again slightly lower at 67 cents per ninety pounds as compared with 70 cents in March and \$1.08 in April, 1931. Prunes were down in the average from 11.4 cents per pound in March to 11 cents in April. Anthracite coal showed little change in the average at \$16.04 per ton as compared with \$16.10 in March. Lower prices were reported from Hamilton and London. A decline in rent was reported from Woodstock and Prince Rupert.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 62.6 cents per bushel in April as compared with 63.1 cents in March. The low price for the month was 59.8 cents per bushel near the beginning and the high 65.3 cents reached about the middle. The advance during the first half of the month was said to be due partly to the unfavourable weather conditions in the winter wheat area of the United States, and the decline during the latter part of the month to the prevalence of rains in these areas, together with a poor European demand. The movement of other grains was

mixed, western barley advancing from 39.9 cents per bushel to 41 cents and oats from 30.1 cents per bushel to 32.3 cents, while flax declined from \$1.02 per bushel to 98.5 cents and rye from 47.9 cents per bushel to 45.8 cents. Flour at Toronto was slightly lower at \$5.04 per barrel. Raw sugar at New York was down from 85.1 cents per cwt. to 72.5 cents (Canadian funds) and granulated at Montreal from \$4.47 per cwt. to \$4.37. Ceylon rubber at New York averaged 3.4 cents per pound in April as compared with 3.7 cents in March. The decline was said to be due in part to the declining consumption in the United States. In livestock, the price of good steers at Toronto advanced from \$5.84 per hundred pounds to \$5.88 and at Winnipeg from \$5.08 per hundred pounds to \$5.12. Veal calves at Toronto declined from \$7.39 per hundred pounds to \$5.98 and at Winnipeg from \$5.76 per hundred pounds to \$4.90. Bacon hogs at Toronto fell from \$4.90 per hundred pounds to \$4.54, at Montreal from \$5.10 per hundred pounds to \$4.77 and at Winnipeg from \$4.12 per hundred pounds to \$3.83. Lambs at Toronto advanced from \$7.30 per hundred pounds to \$7.58. Creamery butter at Montreal was down from 27.2 cents per pound to 23.1 cents and at Toronto from 26.9 cents per pound to 24.4. The price of fresh eggs was considerably lower, at Montreal declining from 28.8 cents per dozen to 21.4 cents and at Toronto from 25.3 cents per dozen to 18.9 cents. The decrease was said to be due mainly to lack of demand for eggs for storage purposes. Raw cotton at New York was down from an average price of 7.7 cents per pound to 6.9 cents (Canadian funds) and raw silk at New York from \$2.18 per pound to \$1.78 (Canadian currency). Raw wool was 1 cent per pound lower at 11 cents. In iron and steel, hot rolled and annealed steel sheets advanced from \$2.83 per hundred pounds to \$2.96, scrap steel from \$6.50 per ton to \$7, and scrap iron from \$10.50 per ton to \$11. In non-ferrous metals electrolytic copper declined from \$7.64 per hundred pounds to \$7.47, copper wire bars from \$6.72 per hundred pounds to \$6.41 and tin ingots from 28.8 cents per pound to 25.5 cents. Portland cement at Montreal advanced from \$1.66 per barrel to \$1.70 and at Toronto from \$2.06 per barrel to \$2.10. The increases were said to be due mainly to the increased sales tax.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 63·0 for March, a decline of 0·6 per cent for the month. Foods as a whole advanced 1·2 per cent, while non-foods declined 1·8 per cent. Among non-foods, the only group to show an advance was iron and steel.

The *Statist* index number, on the base 1867-1877=100, was 84·1 at the end of March, a fall of 3 per cent for the month. Decreases were noted in all groups, the greatest single drop being one of 5·6 per cent in minerals.

**COST OF LIVING.**—The official index number of the Ministry of Labour, on the base July, 1914=100, was 144 at the beginning of April, a fall of 1·4 per cent for the month, due to a substantial fall in food prices, chiefly eggs, butter and milk. Rent, clothing, fuel and light and sundries were all unchanged for the month.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Bureau, on the base 1914=100, (gold basis) was 87 for March, an advance of 2·3 per cent for the month. Foods were higher showing increases in all groups. Industrial materials were also higher, due to the advance in textiles, although minerals and metals were lower and miscellaneous commodities unchanged.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 99·8 for March, showing no change from the February level. An advance of 2 per cent in agricultural products was offset by declines in the other groups.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 122·4 for March, an advance of 0·1 per cent for the month. An advance in food prices was partly

counteracted by declines in clothing, heat and light and sundries.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1378 for February, a decline of 1·1 per cent for the month. Declines in foodstuffs of vegetable origin, textiles, animal products and non-metallic minerals and their products were partly offset by advances in wood and wood products, metals and their products and chemicals and manures.

**COST OF LIVING.**—The official index number, on the base 1926-1930=1000, was 875 for February. There were declines in all groups from the November level with the exception of fuel and light which was unchanged.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 66·0 for March, a decrease of 0·5 per cent for the month. Slight declines were noted in all groups with the exception of miscellaneous commodities which were unchanged.

The *Annalist* index number on the base 1913=100, was 90·7 for April, a fall of 0·4 per cent for the month. Fuels and metals showed advances, but all other groups were included in the decline.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$6·9183 at May 1, a drop of 3·2 per cent for the month, which is the lowest recorded in 33 years, or since May 1, 1899. Of the thirteen groups, eleven were lower and two were unchanged from the previous month.

*Dun's* index number of wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included was \$135·129 at May 1, a fall of 2·3 per cent for the month. The metals and miscellaneous groups were higher than a month previous, but all other groups were included in the general decline, the greatest drop occurring in meats and clothing.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 130·8 for March, a fall of 0·6 per cent for the month due to declines in food and clothing. The other three groups, shelter, fuel and light and sundries were unchanged.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1932

THE number of fatal industrial accidents (including fatalities from industrial diseases reported by workmen's compensation boards, etc., along with fatal accidents, as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the first quarter of 1932, was 192, there being 68 in January, 68 in February and 56 in March.

The report for the fourth quarter of 1931 was given in the LABOUR GAZETTE, February, 1932, page 235. In the first quarter of 1931, 244 fatal accidents were recorded (LABOUR GAZETTE, May, 1931, page 613). The supplementary list of fatal industrial accidents on page 630 contains 40 fatalities for 1931. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial Workmen's Compensation Boards, the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the first quarter of 1932 were as follows: agriculture, 24; logging, 17; fishing and trapping, 7; mining, non-ferrous smelting and quarrying, 27; manufacturing, 24; construction, 21; electric light and power, 1; transportation and public utilities, 42; trade, 15; finance, 1; service, 13.

Of the mining accidents, 7 were in "metaliferous mining," 14 in "coal mining," 1 in "non-metallic mineral mining and quarrying, n.e.s.," and 5 in "structural materials."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 12 in "saw and planing mill products," 4 in "pulp, paper and paper products," 4 in "iron, steel and products," 1 in "non-metallic mineral products, and 1 in "chemical and allied products."

In construction there were 3 fatalities in "buildings and structures," 12 in "highway and bridge," and 6 in "miscellaneous construction."

In transportation and public utilities, there were 33 fatalities in "steam railways," 2 in "water transportation," 1 in "air transportation," 4 in "local transportation," and 2 in "storage."

In trade there were 8 fatalities in "wholesale," and 7 in "retail."

Of the fatalities in service, 8 were in "public administration," 1 in "recreational," 2 in "custom and repair," and 2 in "professional establishments."

There was no serious disaster during the period under review. Accidents involving the loss of two or more lives were as follows:—

Three farmers lost their lives while engaged in operating a wood sawing machine near Dewberry, Alberta, on March 30, when the circular saw jammed.

An engineer and three snow shovellers were killed at Harper's Station, P.E.I., on February 21, when their snow train collided with a freight train.

Two workers with a coal company were buried under a coal slide at Montreal, Que., on March 4.

An engineer, a fireman and a conductor lost their lives near Lillooet, B.C., on March 28 when their train went through a trestle owing to a wash out.

*Supplementary List of Accidents.*—The supplementary list of accidents occurring during 1931, to be found after the main table of accidents, contains 40 fatalities, of which 3 were in logging, 1 in fishing and trapping, 4 in mining, non-ferrous smelting and quarrying, 12 in manufacturing, 9 in construction, 4 in transportation and public utilities, 2 in trade, and 5 in service. One of these accidents occurred in March, 2 in July, 3 in September, 6 in October, 8 in November and 20 in December.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1932

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCK-RAISING—</b>				
Farmer.....	Rang St. Augustin, Que.....	Jan. 3	65	Fell from hay loft to stable floor; fractured spine. Died Jan. 10.
Farmer.....	Near Kelvington, Sask.....	" 8	23	Thrown from load of wood.
Farmer.....	Near Wakefield, Que.....	" 8	28	Struck by falling tree.
Farm hand.....	Near Cochrane, Alta.....	" 10	23	Kicked by horse.
Farm hand.....	West Zorra, Ont.....	" 13	42	Fell down well. Died Jan. 15.
Farmer.....	St. Elie d'Orford, Que.....	" 13	58	Fell into well.
Farmer.....	Near Shediak, N.B.....	about " 14	60	Caught in threshing machine.
Farmer.....	Fraser Valley, B.C.....	" 21	42	Struck by falling tree.
Farmer.....	Canoe Cove, P.E.I.....	" 27	47	Struck by falling tree.
Farmer's son.....	Near Russell, Ont.....	" 30	15	Struck by flywheel of sawing machine when it flew off.
Farmer.....	Minudie, N.S.....	Feb. 2		Slipped on ice and was run over by sleigh.
Farmer.....	Near Wallaceburg, Ont.....	" 9	40	Slipped into water trough and was drowned.
Farmer.....	Silver Plains, Man.....	" 11		Lost in blizzard and was frozen.
Farmer's son.....	St. Victor de Tring, Que.....	" 13	16	Struck by piece of flywheel when it broke while cutting wood.
Farmer.....	Near Nesbitt, Man.....	" 20	56	Load of machinery upset on him in snow.
Farmer.....	Near Embro, Ont.....	" 20		Train struck his car on way to market.
Farmer.....	St. Anne de la Parade, Que.....	" 22	46	Buried by landslide in clay pit.
Farmer.....	Near Biggar, Sask.....	Mar. 4	45	Fell from roof of house. Died Mar. 5.
Farm hand.....	Near Melfort, Sask.....	" 8		Struck by falling tree.
Farmer.....	Oak Flats, Ont.....	" 15	60	Fell 20 feet from ladder.
Farmer.....	Near Chilliwack, B.C.....	" 20	78	Attacked by bull.
Farm hand.....	Near Dauphin, Man.....	" 23	12	Buried when roof of potato pit crashed in.
Farmer.....	Near St. Thomas, Ont.....	" 24	69	Dragged by run-away team.
Farmer.....	Near Kemptville, Ont.....	" 29	83	Trampled by cow. Died April 6.
<b>LOGGING—</b>				
Logger.....	Near St. Paulin, Que.....	about Jan. 5	55	Struck by falling tree.
Foreman.....	Stewiacke, N.S.....	" 13	61	Struck by falling limb; fractured skull.
Logger.....	Near St. Quentin, N.B.....	" 21	19	Crushed by falling tree.
Labourer.....	Thor Lake, Ont.....	" 23	54	Knocked off load by swinging log.
Logger.....	Hassand Twp., Ont.....	Feb. 1	30	Struck by falling snag.
Logger.....	St. Charles de Chicoutimi, Que.....	" 4		Struck by falling tree.
Labourer.....	Matane, Que.....	" 8	20	Fell from load of logs and run over by sleigh.
Teamster.....	Onion Lake, Ont.....	" 9	43	Fell from load of logs and was run over.
Logger.....	Near Van Alain, Que.....	" 13		Struck by falling tree.
Logger.....	Near Peterboro, Ont.....	" 17	55	Struck by falling tree.
Sawyer.....	Bloedel, B.C.....	" 23	42	Struck by falling tree.
Faller.....	St. Thomas, Que.....	" 23	34	Pinned under falling tree.
Bucker.....	Cheminais, B.C.....	Mar. 1		Struck by falling tree.
Teamster.....	Amos, Que.....	" 6	58	Load of logs upset on him when log got caught.
Teamster.....	Sheet Harbour, N.S.....	" 11	24	Fell from load and was run over.
Chaser.....	Joydon Bay, B.C.....	" 16	22	Struck on head by sapling.
Rigger.....	Minstrel Island, B.C.....	" 23	27	Struck by log at pile.
<b>FISHING AND TRAPPING—</b>				
Fisherman.....	Black Bay, Ont.....	Jan. 8	43	Fell through ice and was drowned.
Trapper.....	Batchawana River, Ont.....	about Jan. 19	30	Fell through ice and was drowned.
Trapper.....	Mississauga River, Ont.....	" 30		Broke through ice and was drowned.
Fisherman.....	Near Prince Rupert, B.C.....	about Feb. 23		Drowned when skiff capsized.
Trapper.....	Near Sudbury, Ont.....	about Feb. 26		Accidental discharge of his gun.
Trapper.....	Near Pelly, Sask.....	Mar. 23	35	Accidental discharge of his gun when he fell down hill.
Trapper.....	Rainbow Lake, Alta.....	" 30		Accidental discharge of his gun. Died April 8.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<b>Metalliferous Mining—</b>				
Miner.....	Schumacher, Ont.....	Jan. 7	55	Silicosis. First laid off May 22, 1930.
Shift boss.....	Kirkland Lake, Ont.....	" 9	39	Struck by sand train.
Miner.....	Flin Flon, Man.....	about Jan. 25	28	Fell down stope.
Timberman.....	Britannia, B.C.....	Feb. 15	29	Crushed by rock falling from roof.
Miner.....	Frood, Ont.....	" 16	23	Struck by falling rock.
Miner.....	Rouyn, Que.....	" 18	38	Fell from ledge in mine.
Miner.....	Kirkland Lake, Ont.....	Mar. 22	36	Fell 30 feet following collapse of platform.
<b>Coal Mining—</b>				
Rope rider.....	Coal Creek, B.C.....	Jan. 18		Struck his head while working on trip of cars.
Miner.....	East Coulee, Alta.....	" 19	30	Struck by falling rock. Died Feb. 24.
Miner.....	Diamond City, Alta.....	" 25		Crushed by fall of rock.
Miner.....	Nanaimo, B.C.....	" 29	59	Crushed by coal car.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MILLING, NON-FERROUS SMELTING AND QUARRYING—Con. Coal Mining—Con.</b>				
Miner.....	New Waterford, N.S.....	Feb. 1	45	Struck by string of boxes.
Miner.....	Dominion, N.S.....	" 3		Struck by box of coal. Died Feb. 6.
Miner.....	Foothills, Alta.....	" 5	38	Crushed under falling coal.
Miner.....	Coal Creek, B.C.....	" 5	21	Run over by trip of mine cars when coupling broke. Died Feb. 7.
Rock duster.....	Stellarton, N.S.....	" 8	62	Fell, striking his chest. Died Feb. 16.
Miner.....	Princeton, B.C.....	" 9	24	Struck by falling rock.
Miner.....	Foothills, Alta.....	" 15		Crushed by fall of coal.
Miner.....	Springhill, N.S.....	" 24	38	Crushed by falling stone.
Miner.....	Estevan, Sask.....	" 29	24	Crushed by falling timber. Died Mar. 1.
Loader.....	Shaughnessy, Sask.....	Mar. 28	39	Fall of rock. Died April 1.
<b>Non-metallic Mineral Mining and Quarry- ing, n.e.s.—</b>				
Worker in tale mine..	Madoc, Ont.....	Mar. 14	46	Crushed by falling piece of tale.
<b>Structural Materials—</b>				
Worker in stone quarry.....	Stony Mountain, Man.....	Jan. 4		Buried under crushed stone when chute opened.
Worker in gravel pit.	Near Galt, Ont.....	" 6	60	Run over by truck. Died Jan. 8.
Worker in gravel pit.	Heatherdown, Alta.....	Feb. 5	61	Chalcosis.
Quarry worker.....	Stony Mountain, Man.....	" 18	49	Struck by scoop of crane. Died Feb. 19.
Gravel pit worker..	Near St. Anne des Plaines, Que.....	Mar. 14	45	Struck by frozen block of gravel.
<b>MANUFACTURING—</b>				
<b>Vegetable Foods, Drink and Tobacco—</b>				
Foreman in sugar re- finery.....	St. John, N.B.....	Jan. 7	43	Fell while removing nut. Died Mar. 8.
Worker in starch fac- tory.....	Port Credit, Ont.....	" 8	43	Struck by elevator weight.
<b>Saw and Planing Mill Products—</b>				
Worker.....	Near Redwing, Ont.....	" 6	26	Fell over dam and was drowned.
Fireman.....	Minnehik, Alta.....	" 22	23	Broken arm while fixing engine; infection. Died Jan. 30.
Edgerman.....	Eastford, Ont.....	Feb. 12	21	Struck by piece of timber. Died Feb. 16.
Saw operator.....	Red Deer, Alta.....	Mar. 3		Injured when sleeve caught in saw. Died Mar. 4.
Sawmill worker.....	Weirdale, Alta.....	" 5	18	Drawn into saw when clothing caught in pulley wheel.
Saw operator.....	Richmond, N.S.....	Mar. 8	about 21	Struck by piece of flywheel when it burst.
Sawyer.....	Near Campbellton, N.B.....	" 21		Killed while operating sawing machine.
Lumberman.....	New Annan, N.S.....	" 24	31	Hurled against tree when boiler of portable saw-mill exploded.
Farmer.....	Near Meota, Sask.....	" 28		Drawn into flywheel while putting on driving belt.
Farmer.....	Near Dewsberry, Alta.....	" 30	25	
Farmer.....	Near Dewsberry, Alta.....	" 30	40	Injured when circular saw jammed. Third man died April 3.
Farmer.....	Near Dewsberry, Alta.....	" 30	33	
<b>Pulp, Paper and Paper Products—</b>				
Worker.....	Powell River, B.C.....	Feb. 26	35	Electric shock from switch in power house. Died Mar. 7.
Mill worker.....	Ste. Adele, Que.....	" 28	41	Struck by wooden joiner. Died Mar. 9.
Machine operator....	Three Rivers, Que.....	Mar. 5	22	Fell to concrete floor. Died Mar. 6.
Labourer.....	Kenogami, Que.....	" 8	46	Struck by tackle falling from crane. Died Mar. 10.
<b>Iron, Steel and Products—</b>				
Worker in machinery plant.....	Montreal, Que.....	Jan. 12	52	Struck by steel plate; fractured leg. Died Feb. 19.
Asst. rolls operator..	Welland, Ont.....	" 18	31	Caught in rollers. Died Jan. 21.
Power house operator at foundry.....	Merriton, Ont.....	Feb. 9	76	Fell into canal and was drowned.
Foundry labourer....	Walker ville, Ont.....	" 22	30	Fell into sand bin and was smothered.
<b>Non-Metallic Mineral Products—</b>				
Workman with asph- alt company....	Montreal, Que.....	Mar. 4	25	Poisoned by gas from asphalt.
<b>Chemical and Allied Products—</b>				
Worker in fertilizer plant.....	Warfield, B.C.....	Feb. 7	36	Caught in conveyor belt.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—</b>				
<i>Buildings and Structures</i>				
Labourer.....	Montreal, Que.....	Jan. 7	32	Thrown from dump truck to pavement. Died Jan. 8.
Shingler.....	Vancouver, B.C.....	Mar. 2	48	Fell from roof.
Painter.....	Montreal, Que.....	" 18	55	Fell from scaffold.
<i>Highway and Bridge—</i>		about		
Labourer.....	Clear Lake, Man.....	Jan. 1	.....	Buried under cave-in of earth at excavation.
Worker on street tunnel construction....	Montreal, Que.....	" 6	45	Struck by falling beam; fractured skull. Died Jan. 11.
Labourer.....	Near Kenora, Ont.....	" 12	35	Struck by piece of rock from blast; fractured skull.
Road worker.....	Near Naughton, Ont.....	" 20	39	Injured during blasting operations. Died Feb. 4.
Labourer.....	Sharbott Lake, Ont.....	" 28	30	Struck by rock from blast.
Road worker.....	Shabakwa, Ont.....	Feb. 13	41	Injured during blasting operations. Died Feb. 17.
Labourer.....	Hudson Bay Jct., Sask.....	" 23	40	Struck by falling tree.
Gravel foreman.....	Wawa, Michipicoten, Ont.....	" 29	47	Killed by dynamite blast.
Labourer.....	Saskatoon, Sask.....	Mar. 10	32	Fell 30 feet down chute into steaming concrete.
Workman.....	Yarmouth, N.S.....	" 17	42	Crushed between belt and pulley of stone crusher.
Workman.....	Rutter, Ont.....	about	.....	Buried in gravel slide.
Labourer.....	Near Markstay, Ont.....	Mar. 19	33	Collapse of frozen wall of gravel pit.
<b>Miscellaneous—</b>				
Labourer on sewer construction.....	Halifax, N.S.....	Jan. 4	65	Collapsed while digging sewers.
Watchman on sewer construction.....	Montreal, Que.....	" 12	70	Explosion from attempting to light fire with kerosene.
Watchman on dredge	Toronto, Ont.....	" 20	52	Fell into basin and was drowned.
Worker on sewer construction.....	North Bay, Ont.....	Jan. 21	35	Struck by piece of rock during blasting operations.
Worker on power canal construction.	Beauharnois, Que.....	Feb. 13	43	Electrocuted when power line broke and fell on him.
Carpenter on pier construction.....	Champlain, Que.....	" 24	33	Struck on head by falling plank.
<b>ELECTRIC LIGHT AND POWER—</b>				
Lineman.....	Near Thamesville, Ont.....	Feb. 26	26	Electrocuted when he fell on high tension wire.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways—</i>				
Yardmaster.....	Gravenhurst, Ont.....	Jan. 6	53	Run over by train.
Brakeman.....	Toronto, Ont.....	" 10	61	Fell from train. Died Jan. 11.
Sectionman.....	Near Belleville, Ont.....	" 19	35	Jigger on which he was riding was derailed.
Shedman.....	Vercheres, Que.....	" 20	32	Injured arm. Died Jan. 27.
Sectionman.....	Three Hills, Alta.....	" 22	30	Slipped from car and was run over. Died Jan. 30.
Car repairer.....	Fort William, Ont.....	" 25	58	Fell from top of car. Died Jan. 26.
Brakeman.....	Moose Jaw, Sask.....	" 25	51	Run over by train.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1932—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—<i>Concluded</i></b>				
<i>Water Transportation—</i> Boatswain.....	Port Alberni, B.C.....	Feb. 10	42	Pulled overboard by slipping chain and was drowned.
Stevedore.....	Near North Sydney, N.S....	" 14	36	Caught in winch. Died Feb. 14.
<i>Air Transportation—</i> Pilot.....	Lake Kagainagami, Ont.....	Mar. 12	35	Killed in plane crash.
<i>Local Transportation—</i> Teamster.....	Montreal, Que.....	Jan. 7	42	Street car struck his wagon.
Teamster.....	Toronto, Ont.....	" 9	67	Kicked by horse.
Truck driver.....	Near London, Ont.....	Mar. 6	25	Injured when his truck swerved off highway.
Truck driver.....	Quebec, Que.....	" 15	30	Struck by train.
<i>Storage—</i> Millwright at grain elevator.....	Vancouver, B.C.....	Feb. 24	59	Injured when carried under loaders on belt on Dec. 21, 1929.
Elevator worker.....	Port Colborne, Ont.....	Mar. 2	45	Fell 90 feet in bin.
<b>TRADE—</b>				
<i>Wholesale—</i> Tank wagon driver for petroleum company.....	Edmonton, Alta.....	Jan. 15	60	Scratched hand; infection. Died Jan. 28.
Traveller.....	Near Tilbury, Ont.....	" 23	39	Drowned when his car ran into dredge cut.
Worker in lumber yard.....	Toronto, Ont.....	" 26	62	Struck by piece of lumber falling from pile.
Salesman for shoe company.....	Drummond, Que.....	Feb. 10	46	Slipped on ice on stepping from train. Died Mar. 7.
Grain buyer.....	Edmonton, Alta.....	Mar. 4	65	Leg injured on Dec. 17, 1923; hardening of arteries.
Worker with coal company.....	Montreal, Que.....	" 4	18	Buried under coal slide.
Worker with coal company.....	Montreal, Que.....	" 4	24	
Salesman for soap manufacturers.....	Near Newcastle, Ont.....	" 22	20	Skull fractured when truck skidded into ditch. Died Mar. 24.
<i>Retail—</i> Merchant.....	Toronto, Ont.....	Jan. 4	46	Crushed against pole by car wheel cleaning windows.
Store proprietor.....	London, Ont.....	" 12	68	Shot by hold-up man in store.
Auto dealer.....	Quyon, Que.....	" 12	37	Drowned when his car broke through ice.
Dairy driver.....	Pembroke, Ont.....	Feb. 1	29	Pinned against building when horse ran away. Died Feb. 4.
Bakery driver.....	Ottawa, Ont.....	" 17	27	Thrown from rig against auto when horse ran away. Died Feb. 21.
Workman with ice merchants.....	Montreal, Que.....	" 29	50	Fell from scaffold.
Auto salesman.....	Near Dundas, Ont.....	Mar. 29	47	Injured when his car crashed into fence.
<b>FINANCE—</b> Bank manager.....	Arundel, Que.....	Jan. 3	32	Accidental discharge of revolver while cleaning it.
<b>SERVICE—</b>				
<i>Public Administration—</i> Watchman in Government greenhouse.....	Winnipeg, Man.....	Jan. 12	.....	Overcome by coke gas fumes from furnace.
Municipal labourer.....	Burnaby, B.C.....	" 13	31	Struck on head by hammer. Died Jan. 25.
Constable.....	Rat River, N.W.T.....	" 30	30	Shot in attempt to capture demented trapper.
Watchman.....	Toronto, Ont.....	Feb. 4	52	Fell on icy street; broken leg. Died Mar. 1.
Elevator operator at Customs House.....	Winnipeg, Man.....	" 17	52	Fell down elevator shaft.
Street labourer.....	Montreal, Que.....	" 26	45	Struck by truck.
City foreman.....	Montreal, Que.....	Mar. 2	69	Fell into concrete cellar. Died Mar. 6.
Park worker.....	Guelph, Ont.....	" 11	35	Fell from tree.
<i>Recreational—</i> Employee at Turkish baths.....	Toronto, Ont.....	Jan. 9	63	Scalded when he fell into pit of boiling water.
<i>Custom and Repair—</i> Garage mechanic.....	Saskatoon, Sask.....	Jan. 13	38	Pinned against pole by truck.
Blacksmith.....	London, Ont.....	Mar. 10	.....	Kicked by horse. Died Mar. 15.
<b>Professional Establishments—</b>				
Furnaceman at hospital.....	Montreal, Que.....	Jan. 4	18	Crushed when caught in automatic stoker.
Lawyer.....	Kensington, P.E.I.....	Feb. 20	43	Explosion on pouring gasoline into stove.

# SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>LOGGING—</b>				
Labourer.....	Laviolette, Que.....	Oct. 8	42	Fell down rollway, striking log when his hook slipped.
Farmer.....	Pass Lake, Ont.....	Dec. 10	24	Injured when hand caught in gasoline engine. Died Jan. 27, 1932.
Chokerman.....	Bloedel, B.C.....	" 28	24	Struck on head by snag.
<b>FISHING AND TRAPPING—</b>				
Trapper.....	Lake Nipigon, Ont.....	Dec. 31		Broke through ice and was drowned.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<i>Metaliferous Mining—</i>				
Lineman.....	Premier, B.C.....	Dec. 2	31	Struck by ore bucket on line. Died Jan. 23, 1932.
Labourer.....	Timmins, Ont.....	" 19	37	Injured during blasting operations. Died Dec. 20.
<i>Coal Mining—</i>				
Miner.....	Blakeburn, B.C.....	Mar. 12	41	Spine injured by falling roof. Died Feb. 13, 1932.
Miner.....	Glace Bay, N.S.....	Oct. 13	30	Back injury from fall of coal. Died Mar. 3, 1932.
<b>MANUFACTURING—</b>				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Labourer at cannery.	Aylmer, Ont.....	July 21	49	Injured spine while taking down shafting. Died Nov. 25.
Carter for tobacco factory.	Quebec, Que.....	Dec. 1	53	Injured thumb while carting wood boxes; infection. Died Jan. 14, 1932.
<i>Leather, Fur and Products—</i>				
Machinist for tannery	Joliette, Que.....	Dec. 17	27	Leg crushed between tub and pillar. Died Dec. 18.
<i>Rubber Products—</i>				
Electrician.....	Shefford, Que.....	Nov. 19	44	Car struck by train; fractured skull.
<i>Pulp, Paper and Paper Products—</i>				
Carpenter.....	Montreal, Que.....	Nov. 21	46	Fell on track and flat car ran over him.
Labourer.....	Temiskaming, Que.....	Nov. 26	30	Drowned from boat in rapids.
Labourer.....	Temiskaming, Que.....	Dec. 8	20	Broke through ice on lake and were drowned.
Labourer.....	Temiskaming, Que.....	" 8	36	
<i>Non-Metallic Mineral Products—</i>				
Marble cutter.....	Labelle, Que.....	July 25	66	Heavy stone fell on his leg; infection. Died Oct. 1.
Labourer at refinery.	Montreal, Que.....	Oct. 23	45	Caught in machinery while tightening loose key in bearing. Died Nov. 14.
Labourer at glass factory.....	Hamilton, Ont.....	Nov. 26	81	Knocked down by case falling from pile. Died Jan. 4, 1932.
<i>Chemical and Allied Products—</i>				
Explosives mixer....	Argenteuil, Que.....	Dec. 21	44	Explosion of rim fire priming composition.
<b>CONSTRUCTION—</b>				
<i>Buildings and Structures</i>				
Labourer.....	Montreal, Que.....	Sept. 27	44	Infection from nail wound in shoulder. Died Nov. 13.
Watchman.....	Montreal, Que.....	Oct. 14	59	Fell into hole. Died Dec. 1.
Plumber.....	Chicoutimi, Que.....	Dec. 29	47	Fell 24 feet with scaffold. Died Jan. 16, 1932.
<i>Highway and Bridge—</i>				
Labourer.....	Deux Montagnes, Que.....	Oct. 8	25	Struck by horse.
Labourer.....	Sheet Harbour, N.S.....	Nov. 26	54	Injured by slide of gravel. Died Dec. 26.
Labourer.....	Chicoutimi, Que.....	" 27	28	Drawn under tractor while driving it on hill.
Supervisor on road construction.....	North Bay, Ont.....	Dec. 29	62	Jammed thumb between wheelbarrow and post. Died Jan. 9, 1932.
<i>Miscellaneous—</i>				
Yardmaster on power development.....	Beauharnois, Que.....	Dec. 17	45	Caught and buried in sand chute.
Pitman on dam construction.....	Fraserdale, Ont.....	" 19	35	Caught between dipper of shovel and caterpillar.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Water Transportation—</i>				
Stevedore.....	Quebec, Que.....	Nov. 2 about	51	Injured arm. Died Jan. 11, 1932.
Mate on tug.....	Vancouver, B.C.....	Dec. 15	38	Drowned.

**SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING  
DURING 1931—Concluded**

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<b>Con.</b>				
Local Transportation—				
Carter.....	Quebec, Que.....	Nov. 18	21	Electrocuted by wire.
Telegraphs and Telephones—				
Messenger.....	Near London, Ont.....	Oct. 10	19	Collision of milk truck with his motorcycle.
<b>TRADE—</b>				
Wholesale—				
Salesman for food				
products.....	London, Ont.....	Dec. 22	68	Collision of his car with street car; fractured skull.
Worker with lumber				
dealer.....	Labelle, Que.....	" 31	54	Infection from slivers of wood in wrist. Died Feb. 2, 1932.
<b>SERVICE—</b>				
Public Administration—				
Caretaker, Public				
Works Dept.....	Edmonton, Alta.....	Sept. 19	54	Myocarditis from injury. Died Mar. 10, 1932.
Traffic constable.....	Montreal, Que.....	" 22	28	Collision of truck with his motorcycle.
Teamster for Gov-				
ernment dept.....	Capreol Twp., Ont.....	Dec. 8	68	Wagon ran over him when team ran away. Died Dec. 15.
Watchman.....	Quebec, Que.....	" 10	85	Struck by car; fractured skull. Died Dec. 13.
Municipal labourer..	Cochrane, Ont.....	" 31	24	Crushed under cave-in of embankment. Died Jan. 30, 1932.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Liability for Servant's Negligence depends on Terms of Hiring

A salesman employed by a motor car company in British Columbia, while driving to a certain destination for the purpose of his business, deviated from the direct route in order to take to their destination two passengers whom he had volunteered to carry. While he was thus off his route his car collided with another car, causing injuries to its driver. The injured driver brought an action against the company, the salesman's employer, to recover damages for an injury sustained in consequence of the fault of their servant. Mr. Justice Morrison, Chief Justice of the Supreme Court of British Columbia, who heard the case without a jury, found that the employer was liable under the circumstances and this judgment was later affirmed, on appeal by the company, by the British Columbia Court of Appeal. Reference was made by the latter court to the case of *Battistoni versus Thomas* (LABOUR GAZETTE, April, 1932, page 472), in which, following a similar accident, it was decided that the driver of a milk delivery truck who caused an accident "while on a frolic of his own," was not acting in the course of his employment, and that the employer was therefore not liable. In the present case, however, the Appeal Court considered that the agent's terms of

hiring were different, and that he was not restricted in the use of the car: "he had general authority to use it for his own purposes as well as to advance his employer's interest. The decisive feature is that this general and unrestricted commission at large was given for the master's benefit. It is never known at what time, or under what circumstances, a sale may be effected. That may be gathered from the evidence of Wilson, a witness for appellant. . . . He was permitted to operate it 'at all time of night and day on the company's business or for his own private and personal use.' In other words, he had a roving commission. While on a pleasure jaunt a sale might be made. Where pleasure was indulged in business naturally would be combined with it. He was definitely on his master's business when he invited the respondent to ride with him."

The defendant's appeal was therefore dismissed.

*Jarvis versus Southard Motors Limited* (British Columbia), 1932, *Dominion Law Reports*, volume 2, page 218.

### Female "Student" Employees Covered by Minimum Wage Orders

A female "student-employee" signed a contract with her employer, binding herself to work for three months in an office at Ottawa

without salary, in order that she might obtain experience in office work. The contract contained the following clause:—"It is expressly stipulated that the student-employee offers her services absolutely free for the benefit to be derived from the use of the office equipment, etc." Another clause forbade her to try to obtain remuneration by legal action. She received \$3 a week while she was so employed, the manager of the firm stating that these payments were in the nature of bonuses in appreciation of the work of the "student." The Minimum Wage Board of Ontario charged the employer in the police court with having failed to pay the employee less than \$10 per week, this being the minimum rate established by the Board for inexperienced office workers. The magistrate imposed a fine of \$20, being the minimum fine fixed by the Act.

#### Question of Damages under Fatal Accidents Act

In 1920 the Hydro-Electric Commission of Hamilton installed wires in the premises of an engraving company for the supply of power. Subsequently the company installed a fire escape with an iron ladder close to the wires; and the insulation of the wires having become worn, this ladder became charged with electrical current. On a certain day in 1930 a young man employed by the engraving company, whose duty it was to see that the doors and window of the factory were closed, having locked up and left the premises, noticed that the door at the head of the fire escape was not closed, and attempted to reach it by means of the ladder outside the building. In touching the ladder he received a severe shock, from the effects of which he died later. The young man's father brought an action under the Fatal Accidents Act of Ontario for damages, alleging that his son had been killed through the negligence of the Commission (the statutory agent of the City of Hamilton), and he was allowed \$1,500 by the trial judge. As far as the Commission was concerned, the question at issue was whether the Commission had ever received from the company notice as to the defective condition of the wire. The trial judge found that such notice had been given by telephone, but on appeal by the defendant, the Appeal Court

reached the conclusion that the evidence was not adequate to support the finding of the trial judge on that point; and negligence on the part of the Commission not having been established, the judgment against its principal, the City of Hamilton, was set aside.

*Wilson versus City of Hamilton* (Ontario), 1932, *Ontario Weekly Notes*, vol. 41, page 51.

#### Right to Commission after Termination of Employment

An agent was employed by a collection agency in Manitoba in soliciting commissions on a commission basis, the commission which it was agreed the agent would receive being 50 per cent of that earned by his employees on any business which he introduced. After working for the company for ten months, during which he had considerable success in obtaining payments of money, the agent left the company and joined another company, finally starting in the same business himself under a title similar to that of the agency which had originally employed him. After he had left the employment of this agency he brought action against it, claiming payment of the commission on money which came in to the firm after he had left. The County Court judge allowed the claim, but on appeal, this decision was reversed by the Court of Appeal. The question at issue was as to the period during which it was understood that the commission would be paid. No period was mentioned in the agreement of employment, but the evidence of the manager of the company was that the plaintiff was to be paid a commission "while he was in our employment." Mr. Justice Robson, in the course of his judgment in the Court of Appeal, said:—

"From a practical standpoint, I cannot see how it can ever have been contemplated that such a percentage as 50 per cent with the defendant providing all office accommodation and staff force should continue indefinitely after the plaintiff had withdrawn from the service of the defendant and from active contribution to the labours to the success of the business. To my mind on the facts disclosed the plaintiff had no cause of action whatever."

*Swartz versus Shragge* (Manitoba), 1931, *Western Weekly Reports*, vol. 1, page 797.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed practically no change at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 7,882 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 799,944 persons, as compared with 799,544 in the preceding month. The employment index (with the average in the calendar year 1926, as the base, equal to 100) stood at 87.5, the same as on April 1, as compared with 102.2 at the beginning of May last year. In the preceding ten years, the indexes for May 1 were as follows: 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3 and 1921, 85.1.

At the beginning of May, 1932, the unemployment percentage reported to the Department of Labour by local trade unions was 23.0, contrasted with 20.4 per cent at the beginning of April, 1932, and with 14.9 per cent at the beginning of May, 1931. The May percentage was based on the reports compiled by the Department of Labour from an aggregate of 1,806 labour organizations embracing a membership of 178,076 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed declines in the volume of business transacted by these centres during April, 1932, when a comparison was made both with the previous month and also with the corresponding month last year, the major decline in the former instance being in the construction and maintenance group, while in the latter case, decreases occurred in all divisions except farming. Vacancies in April, 1932, numbered 34,961, applications 57,830, and placements in regular and casual employment 33,744.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$6.90

at the beginning of May as compared with \$7.22 for April; \$8.54 for May, 1931; \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again lower at 67.7 for May, as compared with 68.4 for April; 73.0 for May, 1931; 89.7 for May, 1930; 93.4 for May, 1929; 98.5 for May, 1922; 164.3 for May, 1920 (the peak); and 64.2 for May, 1914.

The loss in working time caused by industrial disputes in Canada during May showed a slight decrease from that recorded for the previous month, but was greater than in May, 1931. Thirteen disputes were in progress at some time during the month, involving 1,521 workers and resulting in a loss of 31,905 working days. Corresponding figures for April, 1932, were: 11 disputes, 1,413 workers and 34,556 working days, and for May, 1931, 14 disputes, 1,184 workers and 14,045 working days.

### Old Age Pensions in Canada in first quarter of 1932

This issue contains the quarterly report of operations under the Old Age Pensions Act, giving particulars as to the pensioners, the amount of payments, etc., during the first three months of the current year. The proportion of the total expenditure on pensions which is borne by the Dominion Government is now 75 per cent, the amendment to the Act which was made by Parliament last year being now in effect. The Act is now in operation in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia and in the Northwest Territories.

### Old Age Pensions as relief plan in Montreal

The unemployment relief committee of the Montreal City Council submitted to the Council during May a proposed plan for establishing old age pensions in the city during the depression. It is estimated that by this plan \$20 a month would be pro-

vided for 5,000 people over 69 years of age, who are either unemployed, or employed in positions which might be filled by younger heads of families. The plan was outlined in the *Montreal Gazette*, May 28, as follows:—

"Out of direct relief money now being spent by the city of Montreal itself, \$10,000 a month would be diverted into a special 'old age pensions fund.' The Quebec government would be asked to allow Montreal to divert, from the direct relief moneys that government contributes here, a sum of \$15,000 a month. With that \$25,000 a month in hand, Ottawa then would be asked to give Montreal \$75,000 a month for the pensions fund making a total of \$100,000 a month. The argument to the city administration and to the Quebec Government would be that no additional money is being asked, and that diversion alone is being sought in the proportions that city and provinces would pay were old age pensions officially in vogue here. To Ottawa, Montreal would say: 'Other provinces and other cities in other provinces are suffering less from aged unemployed because of the old age pensions law. We have no old age pensions law in Quebec. But you have a blank cheque law to do as you please to aid in relieving the jobless. Therefore, we ask you to give us what would be the Federal contribution to monthly old age pensions totalling \$100,000. It is relief, but we of the city of Montreal will create our own special old age pension scheme for the time being and all the while you will contribute out of relief funds.'"

#### **Question of validity of provincial compensation Acts**

Among the "Recent Legal Decisions affecting Labour" at the end of this issue will be found an outline of an important decision by Mr. Justice de Lorimier in the Superior Court at Montreal. The Court declared that the Provincial Legislature had exceeded its constitutional authority in enacting the recent legislation establishing a workmen's compensation commission having judicial powers, on the ground that this legislation was contrary to section 96 of the British North America Act, by which the right to appoint judges belongs exclusively to the Governor-General of Canada. It is stated that this judgment will be the subject of an appeal by the Provincial Government. The progress of this appeal will be watched with interest throughout Canada.

While this issue has not so far been brought directly before the Courts, the validity of several of the provincial Workmen's Compensation Acts, and the authority of the provincial

boards, have been recognized in existing judgments by the Judicial Committee of the Privy Council, the Supreme Court of Canada, and some of the provincial Supreme Courts, during the past twelve years. Passages from some of these judgments are reproduced in an article in this issue. Of special interest is the judgment of the Privy Council in 1920, in the case of the B.C. Workmen's Compensation Board and the Canadian Pacific Railway Company. In this case Viscount Haldane declared that the workman's right to compensation "is the result of a statutory condition of employment made with a workman resident in the province, for his personal benefit and for that of members of his family dependent on him..... This right arises, not out of tort, but out of the workman's statutory contract, and their Lordships think that it is a legitimate provincial object to secure that every workman resident within the province who so contracts should possess it as a benefit conferred on himself as a subject of the province..... The scheme of the Act is not one for interfering with rights outside of the province. It is in substance a scheme for securing a civil right within the province."

#### **Canadian National Railways Rehabilitation Committee**

Under the union-management plan of industrial relations which was established on the C.N.R. system on January 1, 1925 (*LABOUR GAZETTE*, May, 1928, page 489, and previous issues) provision has been made recently for rehabilitating injured employees. The following information in regard to this work has been supplied by Mr. D. F. McGraw, chief claims officer of the railways.

For many years there existed on the Central Region of the Canadian National Railways a committee known as the Committee on Physical Requirements, composed of between twenty and twenty-five officers chosen from different departments. This Committee met periodically and made recommendations as to the class of work for which an employee permanently partially disabled in the service was fitted. It was felt, however, that the function of this committee did not go far enough, in that no steps were taken by the Committee to find suitable employment for such injured workmen. At the first meeting of the Canadian National Railways Safety Council, held in Montreal, October 15, 1930, Mr. McGraw proposed that the Safety Council should absorb the work of the then existing Committee on Physical Requirements, and appoint a committee to be called the Rehabilitation Committee, which would, in addition to carrying on the work of the Physical

Requirements Committee, undertake the task of rehabilitating employees permanently partially disabled in the service. The Safety Council approved of the proposal and a Sub-Committee, consisting of Mr. M. S. Blaiklock, assistant chief engineer, Dr. J. McCombe, chief medical officer, and Mr. McGraw, was appointed, to be known as the Rehabilitation Committee. At the second meeting of the Safety Council held on December 10, 1930, Mr. R. J. Tallon, president of Division No. 4, Railway Employees' Department, and Mr. G. A. Stone, general chairman, Brotherhood of Locomotive Engineers, were appointed members of the Rehabilitation Committee. The Committee at first confined its efforts to the Central Region, but on May 10 this year, the scope of the Committee was enlarged to take in the Atlantic and Western Regions, and representatives were appointed to the Committee from those regions. The personnel of the Committee at the present time is: Mr. M. S. Blaiklock, Chairman, Dr. J. McCombe, Mr. R. J. Tallon, Mr. H. B. Chase, Mr R. E. Linden, Mr J. H. Parkinson, Mr. E. E. Stevens and Mr. D. F. McGraw, Secretary.

Obviously, a workman who has been permanently partially disabled in any industry finds it well-nigh impossible to go out into the open labour market and obtain suitable work, and in most cases it is not desirable from the employer's standpoint to lose the experience of the injured man. The task of the Rehabilitation Committee is therefore, first, to determine the type of work at which such a man may be safely employed, and, finally, to find him such employment.

During the six months between November, 1931, when a meeting of the Rehabilitation Committee was held, and the May, 1932, meeting, eighteen such men were rehabilitated. In one or two cases the men were reinstated at their former employment as a result of their being encouraged to make the necessary painful effort to accustom themselves to the handicap caused by their injury, and through the co-operation of the employing officer in lightening for a time their duties. In the majority of cases, however, the men were placed at entirely different work.

When the Committee determines the class of work for which a man is fitted and recommends that he be placed at work suitable to his condition, a list is prepared and forwarded to the vice-president in charge of operation, who in turn broadcasts it with the request that employing officers refrain from filling positions which might be handled by partially disabled workmen until they have communicated with the secretary of the Committee, so that the list of partially disabled men may be studied and a suitable man appointed

to fill the vacancy. The Pension Committee also co-operates with the Rehabilitation Committee by advising when men are being retired whose positions might be filled by partially disabled workmen.

### **Vocational rehabilitation in United States**

The Federal Board of Vocational Education (Washington), in a recent pamphlet entitled "Reclaimed," describes the work that is being carried on in the United States under a national program for placing physically handicapped men and women in useful employment. Casualties of industry and victims of disease are being provided with jobs to suit their reduced physical condition, and are now employed in such occupations as watch-making, lens grinding, barbering, tailoring, linotype operating, window dressing and show card writing, photography, stenography, shoe repairing, and other trades. "These persons," it is stated, "disabled through infantile paralysis, deafness, loss of arms and legs, tuberculosis, and other handicaps of accident and disease, are examples of the thousands of persons who have been rehabilitated under the national vocational rehabilitation program and fitted for employment in which they are self-supporting and happy." The economic significance of vocational rehabilitation, appears in the statement that the average cost of rehabilitating a disabled person is \$300 as compared with an average annual cost of from \$300 to \$500 for maintaining him at public expense.

### **Joint Council of Trail Mining and Smelting Company**

A joint council representing the workers and the management was formed in the industry carried on at Trail, B.C. by the Consolidated Mining and Smelting Company, shortly after the English "Whitley Commission" had made their report. An account of the achievements of the Council during the fifteen years of its existence was given at a recent social gathering by Mr. S. G. Blaylock, the general manager of the Company. "Let us look," he said, "at just a few of the advances in workmen's security and comfort which have been made possible by this co-operation:—comparative security of work by the open transfer system; the insurance scheme; the pension scheme; the housing scheme; the shareholders' scheme; the hospitals; and all the hundred and one mutual advantages and concessions." (References to these various schemes have been made from time to time in the LABOUR GAZETTE). "The co-operative committee," the manager continued, "is a committee representing each de-

partment to help the management to run the plants of the company in the most economic and efficient way, taking into account the interests of both the men and the company. As I have already said, they have exceeded every expectation. It is comparatively easy for a committee such as ours to function in boom times, but while it is not so easy it is much more important that it should do so when the skies are clouded. Shortly after its inception we went through the critical years just after the war. It was during these years that the full values of this means of close communication between the men and the management was demonstrated. I would feel far more sure of the future if every industry had a committee like ours. There would then be neither any need nor danger of the boat being rocked by unfair treatment of the employees by the companies, or of this whole system being wiped out by revolutions of men who thought they had no other way to help themselves in the reconstruction."

Mr. Blaylock stated that there was no idea at any time that the Joint Council should supersede labour unions.

#### **Quantity of manufacturing production in Canada 1923-1929**

Under this title the Dominion Bureau of Statistics has published a pamphlet which measures the trend of the physical volume, or quantity, of manufacturing production in Canada in recent years. It is pointed out that, owing to the practice of measuring production in terms of prices, the fluctuations in prices have tended to obscure the increase in actual quantities—"for it is, after all, the quantity, rather than the value of production that satisfies human needs." The study covers the production of the seven years from 1923 to 1929, when the manufacturing industries of the Dominion were generally expanding; and the middle year of the period, 1926, was chosen as affording a normal and representative base for the index. Next, the different industries were weighted according to the value added by the manufacture in those industries in 1926, as indicating their relative importance. Finally the quantity of each product of each industry was secured and their relative importance calculated for the base year and for the other years covered.

The Dominion Statistician, in an introductory note, anticipates that the usefulness of the index will be even more clearly apparent when the method is applied to the manufacturing production of 1930 and 1931. "Then in all probability it will be found that the anticipated declines in the money value of

production in most industries, as the result of the general fall of prices, will not mean a corresponding reduction in the quantity of manufactured products available for domestic consumption or for export. Thus the new index will do away with many misconceptions and contribute materially toward a better understanding of the position of the manufacturing industries in the national economy."

"The physical volume of production," it is stated, "increased 50.2 per cent between 1923 and 1929. When it is recalled that the population of Canada increased only 10.8 per cent from 9,083,000 in 1923, to 10,068,000 in 1929, an increase of 50.2 per cent in the volume of manufacturing production is indeed remarkable. Part of this advance was owing to an increase in the domestic demand due to an increased population and a rise in the standard of living, and part to the increased demand abroad for Canadian manufactured products. . . . "With the exception of a slight recession in 1924, the expansion was continuous. As might be expected, not all groups expanded to the same extent. The non-ferrous metal group led with an increase of 90.3 per cent while the animal products group recorded the lowest increase, viz. 17.2 per cent. The slight recession in volume experienced in 1924 was not general—textiles, wood and paper, iron and its products and non-metallic mineral products were the only groups affected. The textile and wood and paper groups recovered in the following year, while in the case of iron and its products and non-metallic minerals, the recovery was not complete until 1926.

"Although this report covers only seven years, yet the general trend of Canadian manufacturing production as a whole is clearly shown. With the passing of time, the index of the volume of production will become more and more valuable in analysing the trend of production, both as regards the volume as well as the substitution of one product for another."

#### **Higher cost of 6-hour Day on Railways in United States**

By recent Congressional resolution the Interstate Commerce Commission was directed to investigate the question of the probable effects of applying to the railways in the United States the principle of the 6-hour working day, and to report their findings to Congress by December 15, 1932. Hearings before the Commission opened during May, evidence being given on behalf of some of the railway companies and of organized labour. On behalf of the Association of Railway Labour Executives it was

stated that the 6-hour day would enable railway employees to enjoy a better standard of living, and bring an end to the existing unemployment situation in the railway industry.

The secretary of the Bureau of Information of the Eastern Railroads told the commission that, under the eight-hour day now in effect, overtime accrues on approximately 41 per cent of the service rendered by the railroads in the eastern region; but if the six-hour day was placed in effect, overtime would accrue on about 65 per cent of the service, and there would be an increase in the eastern region alone of more than 24 per cent in payroll. The eastern railroads, according to the same witness, paid a total compensation to their employees of \$3,290,689 for the week of August 10 through August 16, which was made up of \$2,868,249 in straight time pay, \$394,890 on overtime pay and \$27,549 in additional payments, under the eight-hour schedule. If the six-hour principle had been applied to this week, he said, the compensation would have been \$4,085,496, made up of \$2,868,278 in straight time, \$1,188,877 in overtime, and \$28,341 in additional payments, or an increase in the total of \$794,807 or 24.2 per cent.

The superintendent of the Philadelphia Division of the Pennsylvania Railroad introduced an exhibit for the weeks April 1 to April 14, showing an increase of 554 employees and \$74,204 in compensation resulting from a switch from the eight-hour to the six-hour basis on that division for the weeks indicated. The principle of the six-hour day could be applied without difficulty, he said, if the question of expenses was left out of the picture.

**Six-hour day recommended by railway labour in U.S.A.**

The Railway Labour Executives' Association (U.S.A.) formulated in the *Railroad Trainman*, June, 1932, their views on the 6-hour day question in connection with the investigation by the Interstate Commerce Commission, to which reference is made in the preceding note.

"In urging the application of the principle of a six-hour day before the Interstate Commerce Commission," they say, "we will lay down as our foundation principle that the primary service and the primary obligation of every industry is to furnish a livelihood to those who have invested their lives in that industry. It is the failure to recognize or apply this principle which in our judgment is the major cause of the present terrible depression in business. This depression has proved with unhappy force that interest can

only be made on money investments, and that property values can only be maintained, through the productive power and purchasing power of millions of workers who must be kept employed. This is the first demand which must be met by those who control industries and government. If this demand is not met, destitution for masses of the people and wholesale losses to property owners are inevitable. . . . It is time to call a halt upon industrial, financial and political policies that are not only inhuman but are essentially unsound. We believe that the economic powers of our industrial leadership, the financial powers of our banking institutions, and the political powers of government should all be exerted in the utmost effort to provide directly for the employment of the millions of our now unemployed wage earners. Millions of our people are in need of food and clothing and shelter. Millions can be put to work producing and transporting the products for which millions are in want. The railroads and other industries are now borrowing millions of dollars with the aid of the credit of the national government in order to meet their financial requirements. The railroads and other industries could employ several million men now idle if they could obtain credit with which to meet the human requirements of their workers. . . . It is the desire to increase employment that has united the railway workers with other organized labour groups in promoting the principle of the six-hour day. The hope of the future lies, not in reducing the number of men employed, and not in reducing the payrolls of industry, but in increasing the number of men employed and increasing the payrolls of industry; so that the tremendous productive power of our industries can be maintained by an equivalent purchasing power in the hands of the masses of the people."

**National Bureau of Economic Research (U.S.A.)**

Note was made in the *LABOUR GAZETTE*, June, 1931, page 673, of the official recognition that was given to this United States organization last year when the President's Committee on Economic Changes asked the National Bureau to prepare a special report on recent developments in the field of their inquiry. The Bureau's annual report for 1931, recently published, shows the nature of its researches. The National Bureau of Economic Research, Incorporated, was organized in 1920 in response to a growing demand for exact and impartial determination of the facts bearing upon economic, social and industrial problems. The leading economic surveys

conducted so far have been the series on the national income of the people of the United States and that on recent economic changes. The latter work described economic developments of the post-war period during which radical and possibly enduring transformations in economic structure and functions were taking place.

The subjects of studies now in progress, and to be continued during the coming year, are as follows: (1) The amount and distribution of national incomes; (2) business cycles; (3) seasonal fluctuations in industry; (4) prices and price structure; (5) economic tendencies, aspects of pre-war and post-war changes; (6) social and economic aspects of the American labour market; (7) the measurement of unemployment; (8) the trend of corporation profits, 1921-1929.

New studies are being undertaken into the subjects of (1) national savings and the investment of capital; (2) the state of competition in the United States; and (3) the physical volume of production in the United States, and the flow of goods from producer to consumer.

Sales of radio sets in Manitoba last year numbered 19,340, compared with 11,689 the year before. Sales in Alberta rose from 8,492 to 13,849; in Saskatchewan from 6,034 to 7,158, and in British Columbia from 17,705 to 23,902.

Industrial accidents in manufacturing in the United States decreased in frequency but increased in severity in 1930, as compared with 1929, according to the 1930 accident survey by the Bureau of Labour Statistics. Similarly, for the 5-year period 1926 to 1930, the total severity rate increased 7.6 per cent although the frequency rate decreased 4.5 per cent.

The average daily farm wage in the United States on April 1, 1932, was \$1.35 without board and \$0.97 with board, as shown by data gathered by the United States Department of Agriculture. There was a wide range in rates between different sections of the country, running from \$0.90 without board and \$1.60 with board in the North Atlantic. The supply of labour, taking the country as a whole, was 122.2 per cent of normal and the demand 63.2 per cent of normal. The supply ranged from 113.6 per cent of normal in the South Atlantic section to 129.1 in the Far Western and the demand from 62.7 per cent in the North Central to 72.1 in the North Atlantic.

According to the latest official record, British Columbia has 35 salmon canneries, 35 dry-salteries, nine pilchard reduction plants, 19 herring dry-salteries and one pilchard cannery.

"Following the most remarkable health year the United States and Canada have ever experienced, the first quarter of 1932 has registered a lower death rate than ever previously recorded for any winter season." This is shown by the mortality statistics of the many millions of the Metropolitan Life Insurance Company's industrial policyholders, who constitute a large cross-section of the populations of both countries, and whose health, more than that of any other group of the population, would be expected to feel the unfavourable effects of business depression and widespread unemployment.

#### **Employment in Chemical Industry in Canada in 1930**

According to a report recently published by the Dominion Bureau of Statistics, production of chemicals and allied products was valued at \$119,969,637 in 1930. This output was 13.4 per cent below the corresponding figure of \$138,545,221 for 1929 and 3 per cent below 1928, but was higher than the value for any previous year since 1918. The average number of persons employed in the manufacture of chemicals and allied products in Canada during 1930, including both salaried employees and wage-earners, was 15,503. This figure represented a decrease of 1,191 or 7 per cent from the number employed in the previous year. Plants in Ontario gave work to 8,403 people; in Quebec, 5,521 people; in British Columbia, 575; Manitoba, 581; Nova Scotia, 227; New Brunswick, 69; and Saskatchewan and Alberta, 127. The 4,423 salaried employees were paid \$9,339,815 during the year, and the average of 11,080 wage-earners received a total of \$11,701,974, making a total amount of \$21,041,789 expended for salaries and wages by the various companies.

The trend of employment, as reflected by the records of the total number of wage-earners on the rolls as at the fifteenth of each month, showed 11,194 wage-earners (excluding salaried employees) on the rolls in January, from which the number declined slightly to 11,094 in March, rose to the maximum of 11,381 in April, then declined steadily to close the year at 10,039. The average for the year was 11,080.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

**I**NDUSTRIAL conditions as affecting the employment situation throughout Canada at the end of May were reported by the superintendents of the Employment Service of Canada to be as follows:—

In Nova Scotia farmers were reported as busy on the spring seeding. Good catches of all seasonable fish were being made, while the logging industry showed very little activity. Manufacturing appeared to be fairly active, although business in the iron and steel line was slack. Not much construction was being proceeded with although some local relief works still in hand were providing employment in various localities. Transportation was reported as fair. Coal mining production still showed considerable curtailment, with the mines only working a few days a week. The demand for women domestic workers continued in fair volume.

New Brunswick farmers had practically completed their spring seeding. Fishing in this province reported fair catches, with indications for an exceptionally good year for lobsters. Apart from a small amount of pulpwood being peeled in the Saint John area, the logging and allied lines showed very little activity. Manufacturing was quiet in the City of Saint John, while fair at Moncton, with some of the seasonal lumbering industries getting into production in the Chatham district. The volume of construction throughout the province was not large although public works continued to relieve unemployment. Transportation showed fair activity, while trade likewise was fair.

A seasonal increase in the number of farm placements was noted at the employment offices of the Province of Quebec. Logging continued quiet, while mining did not show any improvement during the month. Manufacturing was reported as improved in the City of Hull, but in Montreal, leather, textiles, clothing and metals were all stated to be quiet. In Quebec factories continued to operate on reduced time, while Sherbrooke plants showed some slight declines, but at Three Rivers a minor improvement in the manufacture of paper was reported. Building and construction showed quite an improvement, with an increased number of placements of mechanics in this line. Transportation showed a slight improvement. Trade was a little better. The employment situation as affecting women domestic workers was improved, due to some extent to the approaching tourist season.

No considerable demand for farm help had yet found its way to the offices of the Em-

ployment Service in Ontario, most centres commenting on this situation as being only fair. Apart from North Bay, Port Arthur and Sudbury little activity was shown in the logging industry. Some slight improvement, resulting in a small additional number of men being given work, was reported from the mining industries of Northern Ontario. A general slackness was still evident in manufacturing throughout this province, although some bright spots appeared here and there. No improvement was shown in the automobile trades, although some manufacturers in miscellaneous lines in the City of Toronto were known to be very busy. Apart from relief work and short jobs there was very little demand for building tradesmen. The demand for women domestic workers, though stimulated to some extent by the opening up of golf clubs and summer hotels, was not particularly brisk.

With seeding operations practically completed in the Province of Manitoba the demand for farm workers showed signs of slackening off. Outside of Winnipeg very little construction was going forward in the province; in Winnipeg, although the value of building permits was down by comparison with last year, a permit for nearly \$900,000 on an upper portion of a new auditorium had just been issued, which promised some assistance in relieving the situation amongst building trades' workers in that city. The demand for women domestic workers was fairly quiet. Generally speaking, the employment situation in Manitoba did not show material change during the month of May.

Most centres in Saskatchewan reported decreases in the numbers of farm workers being sent out to jobs, largely owing to the completion of seeding. The demand for construction workers was fairly small, since the volume of work of this nature underway was not large. Nominal demands for women domestic workers were registered. The general employment situation in Saskatchewan remained quiet, the only material difference which occurred being incidental to the spring activities of the farming industry.

Such orders for farm workers as were received in Alberta were easily filled, but rains had interfered with work on the land, and this fact was reflected in the relatively small number of requests for farm workers received at the employment offices. Except for Edmonton, where an increase in the volume of building permits issued to date over the same period last year was reported, very few con-

(9) Including lines east of Quebec.

(10) MacLean's Building Review.

struction jobs were going forward in Alberta; consequently there was not much demand for workers in this industry, apart from those incidental to relief work. Relatively few vacancies for women domestic workers were being reported, with applicants still greatly in excess of vacancies. General comments on the situation in the province indicated that no important change had occurred during the month, with employment conditions still stated to be very quiet.

Logging in British Columbia showed a few minor jobs opening up here and there, but generally speaking there was no demand for workers in this industry. Farming, insofar as it affected demands for labour, was also rather quiet. Construction was stated to be quiet at most centres although one or two points, notably Nelson, showed some improvement. The despatch of men to the relief camps tended to reduce the unemployed lists at some centres. As is customary at this time of year, railway points in British Columbia reported a considerable number of transients from various parts of the country as calling in search of employment. While the mining industry continued to show reasonable activity no new workers were being taken on. As in the case of the Prairie Provinces, British Columbia still showed a very quiet employment situation.

The Dominion Bureau of Statistics tabulated returns from 7,882 firms who reported practically no general change in employment on May 1; the payrolls of these employers aggregated 799,944, as compared with 799,544 in the preceding month. This gain was not sufficiently large to alter the index number for the preceding month, which, on May 1 as on April 1, stood at 87.5, as compared with 102.2 at the beginning of May last year. The index on May 1 in the ten preceding years was as follows: 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3 and 1921, 85.1.

Heightened activity was recorded in Quebec, the Prairie Provinces and British Columbia, while the Maritime Provinces and Ontario showed declines. In the Maritime Provinces, manufacturing, coal mining, transportation and railway construction reported curtailment, while logging, building and highway construction and hotels and restaurants recorded important gains. In Quebec, large increases were reported in transportation and building construction, while trade and logging were also busier, the latter on account of river drives. On the other hand, manufacturing, highway and railway construction showed declines. In Ontario, building construction, trade and trans-

portation reported increases, but the movement was downward in manufacturing and highway construction, the latter as a result of the cessation of unemployment relief work. In the Prairie Provinces, communications, trade and construction showed heightened activity, while reductions were reported in manufacturing, logging and mining. In British Columbia, logging, highway and railway construction were decidedly busier, but manufacturing and transportation were not so active.

Quebec City and Ottawa showed improvement, but the tendency was downward in Toronto, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver, while Montreal firms, on a whole, indicated practically no change. In Montreal, transportation recorded a considerable seasonal advance, and trade and building construction were also busier, but manufacturing and road construction afforded less employment. In Quebec, most of the improvement took place in shipping and construction. In Toronto, building construction, trade and transportation reported increases in personnel, but manufacturing and highway construction were slacker. In Ottawa, manufacturing was quieter, but transportation and construction reported improvement. In Hamilton, manufactures were slacker, while construction and transportation showed increased activity. In Windsor and the adjacent Border Cities, moderate curtailment was noted, chiefly in automobile factories. In Winnipeg, retail trade was rather brisker, but factories reported losses in personnel. In Vancouver, manufacturing was not so active, while construction registered an increase.

An analysis of the returns by industries shows that there was a falling-off in manufacturing, particularly in iron and steel plants. In the non-manufacturing division, logging, transportation, services, trade and building and railway construction registered increases in employment, while coal and metallic ore mining and highway construction released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1932.

TRADE UNION REPORTS.	Unemployment among local trade unions, which had shown slight abatement during February and March, again increased in volume during
----------------------------	---

April according to the returns tabulated from an aggregate of 1,806 labour organizations, embracing 178,076 members. Of these, 40,936 were reported without work on the last day of the month, a percentage of 23.0, compared with 20.4 per cent of idleness in March. Much

quieter conditions prevailed than in April, 1931, when 14.9 per cent of inactivity was noted. Responsibility for the less favourable conditions shown from March rested chiefly with unions in the Province of Quebec, where the manufacturing industries, particularly the garment and iron and steel trades, suffered severe curtailment, but in Ontario also recessions on a smaller scale, though noteworthy, were reported. Nova Scotia, New Brunswick, Manitoba, Alberta and British Columbia unions also contributed, in a smaller way, to the total unemployment increase. The situation in Saskatchewan tended toward greater activity, though the gain was fractional only. Quebec, Ontario and Manitoba unions reported extensive contractions in the volume of work available from April, 1931, particularly in the building and manufacturing industries. New Brunswick and Alberta unions also indicated substantial employment losses during the month reviewed and declines of more moderate proportions occurred among Nova Scotia, Saskatchewan and British Columbia unions.

A more detailed report on unemployment among local trade unions at the close of April, 1932, will be found on another page of this issue.

During the month of April, 1932, the offices of the Employment Service of Canada made 35,517 references of persons to positions and effected a total of 33,744 placements. The placements in regular employment were 12,066, of which 8,373 were of men and 3,693 of women, while those in casual work were 21,678 in number. Applications for work reported at the various centres numbered 57,830, of which 45,793 were from men and 12,037 from women workers. Employers advised the Service of 34,961 vacancies during April, 26,882 for men and 8,079 for women. A gain over March was shown in applicants registered, but a decline in vacancies offered and placements effected, while in comparison with the corresponding month a year ago, declines were reported in all divisions, the records for March, 1932, showing 35,275 vacancies offered, 55,271 applications made and 34,275 placements effected, while in April, 1931, the records show 39,194 opportunities for service, 59,202 applications for work and a total of 37,474 placements in regular and casual work. A report in greater detail of the work of the Employment Offices for the month of April, 1932, appears elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during April, 1932, was \$4,237,160, as compared with \$3,323,602 in the preceding month and with \$13,495,165 in April, 1931.

The *MacLean Building Review* states that the May total for contracts awarded in Canada showed a forty per cent increase over the April figure. Each group, Residential, Business Buildings, Industrial and Engineering, enjoyed a better month. Contemplated new work, reported for the first time, increased over April totals also. The total value of construction contracts awarded during May was \$14,186,000. Over half of the May awards related to work in the Province of Quebec. That province took care of 52.2 per cent of all contracts, the value being \$7,390,000. Ontario shared the May awards to the extent of 29.3 per cent on a valuation of \$4,167,900. Ten per cent is shown for the Prairie Provinces, which have \$1,417,100 worth of new work. \$873,500 was the total for British Columbia, or 6.1 per cent, while the Maritime Provinces took care of \$337,500 worth, or 2.4 per cent. The largest portion of the May awards related to engineering work, which was valued at \$4,968,000, or 35 per cent of the Dominion total. Business Buildings had 31.5 per cent, the total being \$4,463,900. Twenty-five per cent applied to Residences and Apartments, valued at \$3,541,800. The portion for Industrial amounted to \$1,212,300, or 8.5 per cent.

#### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 640.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that despite gains in several important industries, industrial operations in Canada were at a slightly lower level during April than in the preceding month. After showing greater activity in March, the primary iron and steel and automobile industries operated at reduced rates in the month under review. The output of pig iron was 16,898 long tons compared with 17,989 tons in March, and the production of steel ingots and direct castings was 36,030 tons compared with 43,572 tons. The output of motor cars was only 6,810 compared with 8,318 in March, whereas

#### EMPLOYMENT OFFICE REPORTS.

#### INDUSTRIAL PRODUCTION.

a considerable gain would normally be expected in April. Imports of crude rubber and crude petroleum, suggestive of preparations for operations in the tire and oil industries, failed to hold at the levels of March, even after adjustment for seasonal tendencies. The production of newsprint in April amounted to 176,660 tons compared with 166,758 tons in March, a gain after seasonal adjustment of more than 6 per cent. A favourable feature of the month's operations was the excess of shipments over production. Shipments in April were 186,443 tons, the excess over production being 9,783 tons. Mill stocks, which had been 63,548 tons at the end of March were reduced to 53,904 tons at the end of April. Exports of planks and boards were 42,515,000 feet compared with 77,552,000 in March, indicating a considerable decline even after seasonal adjustment.

Mineral production in April was featured by the excellent showing made by the gold mines. Receipts of gold at the Mint during the month reached a new high total of 260,353 fine ounces valued at \$5,381,984. The corresponding receipts in March were 198,332 ounces valued at \$4,099,892. Notable gains were shown by the Porcupine and Kirkland Districts, which shipped 92,910 ounces and 98,216 ounces, respectively. Shipments of silver and base metals showed gains in April after seasonal adjustment, exports of nickel amounting to 2,428,200 pounds. The decline in the value of exports of merchandise was less than normal for the season, the total at \$27,455,000 showing a gain of nearly 15 per cent after the elimination of the seasonal factor. The outstanding feature of the trade of Canada in the month of April was the large increase in exports to Great Britain, the gain being from \$6,185,000 in April, 1931, to \$7,276,000 in April last.

The freight movement showed a moderate gain in April, after seasonal adjustment, loadings of 180,177 cars showing a gain of more than 5 per cent.

During the past five weeks there has been a decided improvement in the movement of wheat from Canada and the United States, over 9½ million bushels being cleared during the week ending May 14.

**Coal.**—Coal production in Canada during April totalled 734,500 tons, a decline of 35·2 per cent from the 1927-1931 average for the month of 1,133,810 tons. Bituminous coal produced during April amounted to 573,828 tons, sub-bituminous coal, 37,933 tons, and lignite coal, 122,739 tons. Nova Scotia's output was recorded at 288,936 tons or 35·0 per cent below

the April, 1931, total of 444,542 tons. Alberta mines produced 253,153 tons, a decrease of 7·5 per cent from the output in the corresponding month of last year. An advance of 10·4 per cent was shown in the production of coal in British Columbia; the month's total was 150,137 tons as compared with 135,976 tons produced in April, 1931. Saskatchewan's output of 32,618 tons was 8·3 per cent above the tonnage raised in the corresponding period last year. New Brunswick mines produced 9,656 tons in April as against 14,177 tons mined a year ago.

Imports of coal into Canada declined 25·9 per cent to 542,398 tons from the five-year average for the month of 731,941 tons. Anthracite coal imported totalled 179,029 tons, made up of 122,000 tons from the United States and 57,029 tons from Great Britain. Importations of bituminous coal consisted of 357,788 tons from the United States and 5,530 tons from Great Britain. Fifty-one tons of lignite coal were received from the United States during the month. Canadian coal exports amounted to 12,576 tons, a 46·2 per cent falling off from the April, 1927-1931 average of 23,372 tons. Coal made available for consumption in Canada totalled 1,264,322 tons, a decrease of 31·4 per cent from the five-year average for April of 1,842,379 tons. Canada's April coal supply was obtained from the following sources: Canadian mines, 57·1 per cent; the United States, 33·0 per cent; and Great Britain, 4·9 per cent. The month's supply included 924,954 tons of bituminous coal, 179,029 tons of anthracite coal, 122,406 tons of lignite coal, and 37,933 tons of sub-bituminous coal.

#### EXTERNAL TRADE

A summary of Canadian trade in April, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$29,794,296 as compared with \$57,437,184 in the preceding month and with \$51,189,376 in April, 1931. The chief imports in April, 1932, were: iron and its products, \$5,819,916; non-metallic minerals and products, \$5,566,985; fibres, textiles and textile products, \$4,601,133.

The merchandise exported from Canada during April, 1932, amounted to \$26,975,756 as compared with \$39,749,307 in the preceding month and with \$33,935,075 in April, 1931. The chief exports in April, 1932, were: wood, wood products and paper, \$9,691,974; agricultural and vegetable products, mainly foods, \$7,158,423; non-ferrous metals and their products, \$2,707,611.

### Strikes and Lockouts

The time loss due to industrial disputes showed a slight decrease from that recorded for the previous month owing to the cessation toward the end of May of two of the four strikes of coal miners in western Canada which had commenced early in 1932. In comparison with the figures for May, 1931, while one strike less was recorded, the time loss and the number of workers involved showed substantial increases, due chiefly to the above-mentioned strikes of coal miners. There were in existence during the month thirteen disputes involving 1,521 workers, and resulting in a time loss of 31,905 working days, as compared with eleven disputes, involving 1,413 workers and resulting in a time loss of 34,556 working days in April. In May, 1931, there were on record fourteen disputes, involving 1,184 workers and resulting in a time loss of 14,045 working days. At the end of the month there were on record four disputes involving approximately 600 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$6.90 at the beginning of May, as compared with \$7.22 for April; \$8.54 for May, 1931; \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. The decrease was due mainly to substantially lower prices for eggs and butter, while the prices of beef, veal, pork, milk, tea and potatoes were also lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.45 at the beginning of May, as compared with \$17.09 for April; \$18.82 for May, 1931; \$21.49 for May, 1930; \$21.21 for May, 1929; \$20.57 for May, 1922; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. Fuel was slightly lower due to a seasonal decrease in the price of anthracite coal. Considerable decrease in rent was reported from several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 again showed a decrease at 67.7 for May as compared with 68.4 for April; 73.0 for May, 1931; 89.7 for May, 1930; 93.4 for May, 1929; 98.5 for May, 1922; 164.3 for May, 1920 (the peak); and 64.2 for May, 1914. In the classification according to chief component materials seven of the eight main groups were lower and one

was unchanged. The groups which declined were: the Vegetable and Vegetable Products group because of lower prices for barley, corn, flax, rye, bran and shorts which more than offset increases in the prices of oats, wheat, flour, oatmeal and rolled oats; the Animals and their Products group, because of lower quotations for hides, leather, hogs, butter and eggs which more than offset advances for canned salmon, lambs and fresh meats; the Fibres, Textiles and Textile Products group, due to lower prices for raw cotton, jute, silk and wool; the Wood, Wood Products and Paper group, mainly because of decreased prices for lath and certain lines of lumber; the Non-Ferrous Metals and their Products group, because of declines in the prices of antimony, copper, lead and zinc; the Non-Metallic Minerals and their Products group, because of lower prices for imported bituminous coal, which more than offset advances in the prices of gasoline, coal oil and anthracite coal; and the Chemicals and Allied Products group, because of declines in the prices of borax and copper sulphate. The Iron and its Products group was unchanged.

### Correspondence Lessons in Coal Mining and Surveying in British Columbia

Coal mining and mine surveying are among the subjects for which correspondence courses are provided by the Education Department of British Columbia. According to the 60th annual report of the Public Schools of the provinces for 1930-31, this work is conducted to prepare men for the examinations demanded by the Department of Mines in the interest of public safety. The courses are as follows:— No. 1 Preparatory mining course for boys over 15 years of age who have left school; No. 2. Course in arithmetic and mathematics; No. 3. Course for fireboss, shiftboss, or shot-lighter's papers (third class); No. 4. Course for overmen's papers (second class); No. 5. Course for mine manager's papers; No. 6. Course in mine-survey work. The enrolment in the mining courses numbers eighteen, and the lessons are so arranged that a boy on leaving school can continue his studies until he reaches the age of 23, at which age he is permitted to compete for his Provincial mining papers. Course No. 1, is divided into six separate sections of carefully graded work, and regular application will fit a young man thoroughly for the examinations held for shot-lighters. With a continuance of his studies his papers as overman will not be difficult to obtain, and following these two the aspiring coal-miner may rise to the highest position in his calling.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT FOR THE MONTH OF MAY

**D**URING the month of May an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour from certain employees in western Canada of the Canadian Pacific Railway and Canadian National Railways, respectively, being machinists, boilermakers, blacksmiths, electricians, moulders, carmen, their helpers and apprentices, and other employees, most of whom are stated to be members of the One Big Union. The applicants claim the right to

negotiate with the managements of the railways in question, directly or through the Railway Association of Canada, certain changes in the wage agreement already in effect between the Railway Association of Canada and Division No. 4, Railway Employees' Department of the American Federation of Labour; also to negotiate upon the ten per cent wage reduction which was recently put into effect. Approximately 8,000 employees are stated to be directly affected by the dispute. The application was under consideration at the close of the month.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING APRIL AND MAY, 1932

**T**HE last issue of the *LABOUR GAZETTE* (page 493) contained a report giving details of the conciliation work carried on by the Department of Labour during the fiscal year ending March 31, 1932. The present article brings this information up to the end of May. Conciliation proceedings are carried on for the most part under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the

Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

*Halifax, N.S.*—On March 11 the Constructive Mechanical Trades Exchange, Halifax, N.S., gave notice to the building trades group, namely the bricklayers, plasterers, plumbers and steamfitters, electricians, carpenters and painters, that, effective May 1, the wages rates for these trades would be reduced approximately 20 per cent, and specified the rates that would be effective from this date. The president of the Halifax Trades and Labour Council immediately gave notice that the proposed reduction would not be acceptable. Subsequent negotiations between the interested parties resulted in a deadlock, and the Minister was so advised by the secretary of the Halifax Trades and Labour Council under date of April 24. Following this notification both parties to the dispute were informed that the department would be glad to render any assistance possible to solve the difficulty, which offer was acceptable to those concerned. The Eastern Representative of the Department stationed at Halifax arranged for a conference between the committees representing the men and the Constructive Mechanical Trades Exchange for the following Thursday night, April 28. At the conference the committee representing the Trades and Labour Council offered to accept a 10 per cent reduction in the higher paid classifications and a lesser reduction in the lower paid classifications, the employers agreeing to bring this offer before their Association on the following Saturday night. As a result of the Saturday meeting the employers offered certain concessions,

which actually amounted to splitting the difference between their original offer and the proposal of the Trades and Labour Council committee. This offer, however, did not prove acceptable, the carpenters, painters, plumbers and steamfitters deciding to continue working under protest pending further negotiations, while the plasterers, electrical workers and bricklayers went on strike Monday morning, May 2. Anticipating the arrival in Halifax on Tuesday night of the Chief Conciliation Officer of the Department, the representative of the Department arranged for a further conference between the interested parties for Wednesday night, May 3. Prior to this conference the Chief Conciliation Officer had interviews with the president of the Trades and Labour Council, as well as a committee of the Constructive Mechanical Trades Exchange, and discussed fully the various matters at issue. The general meeting which followed, and at which the Departmental officers were present, paved the way for an amicable adjustment, new agreements being signed and those on strike returning to work.

*Edmonton, Alta.*—A dispute having arisen between the Edmonton Builders' Exchange and the United Brotherhood of Carpenters and Joiners of America and the Amalgamated Carpenters of Canada as to wages rates from May 1, the Western Representative of the Department of Labour, who visited Edmonton on May 20, interested himself in the matter. Several conferences had taken place between the interested parties without results. On the suggestion of the Departmental representative a further conference was arranged for the afternoon of May 23, but when the officer again visited Edmonton on the 27th the matter had not been adjusted. Further conferences with the interested parties were held and suggestions were made as to the basis of settlement. The Department was informed under date of May 30 that an agreement had been reached.

On the occasion of the final visit of the conciliation officer a strike of plumbers had been in progress since May 9, a reduction in wages from \$1.20 to \$1 per hour having been proposed by the employers, the union refusing to accept a reduction of more than 10 per cent making the rate \$1.08. The officer arranged a conference the following day at which it was agreed that the rate should be \$1.05 per hour, the same as at Calgary.

*Toronto, Ont.*—Fur factory workers employed by the Menkes Fur Company, Toronto, ceased work on May 17 due to the dismissal of one of the employees. On Friday morning, May 19 a representative of the employees called upon the Toronto representative of

the Department of Labour and requested that the Department interest itself in a settlement of the dispute. Our Toronto officer thereupon held interviews with the manager of the Company and endeavoured to find a solution of the difficulty. The manager, however, would not agree to reinstate the employee who had been dismissed but was willing to have the question dealt with by a board of arbitration and to be bound by the findings of such board. This arrangement, however, was not acceptable to the employees' representative. Subsequently the employee was reinstated and the strike terminated on May 27, the employees returning to work on the morning of May 28.

*Winnipeg, Man.*—On March 14, 1932, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received from the Civic Federation of Employees of the City of Winnipeg, including electricians, drivers, chauffeurs, labourers, electric operators, apprentices, meter readers, instructors, trimmers and fuel plant operators, protesting against a 10 per cent reduction in wages made effective by the City of Winnipeg as from March 1. It developed in subsequent correspondence that the wages committee of the City Council entertained doubt as to whether all the groups included in the application were engaged in industries connected with public utilities, and that therefore the application might not come within the scope of the statute. As it seemed difficult to obtain the full facts of the situation through correspondence it was decided to have the Western Representative of the Department, who was in Ottawa at the time, visit Winnipeg on his return to the West and endeavour to clarify the situation or adjust the difficulty. Upon reaching Winnipeg the Western Representative, accompanied by the Winnipeg representative, on numerous occasions had conferences with the committees representing the civic employees and representatives of the City of Winnipeg over a very considerable period. Finally a new agreement was reached providing for a wages reduction of ten per cent. The agreement declares that "such reduction is made necessary in part by reason of the fact that the city finds itself in a difficult financial position with relation to its revenue and expenditure and that such reduction is not to be regarded as necessarily permanent." It further provides that "all employees of the City of Winnipeg shall be governed by the employment conditions for the several classes of service in which they are respectively employed." The classifica-

tions referred to are set forth in the agreement. The application for a board was therefore withdrawn.

*Calgary, Alta.*—When the Western Representative of the Department visited Calgary on or about May 23 a dispute was in existence between the United Brotherhood of Carpenters and the Calgary Builders' Exchange in regard to the wages rates, etc., to be effective for the present year. The former rate had been \$1 per hour and the Exchange had given notice of a reduction to 85 cents. Further conferences were held on the suggestion of the departmental officer and it is understood

that the representative of the carpenters agreed to accept the 85 cent rate proposed, but insisted upon a 5-day week rather than the 5½-day week heretofore in effect, also that time and one-half should be paid for any work done on Saturday mornings. The representative of the Exchange consented to the 5-day week, with the reservation that Saturday mornings would be worked in cases of necessity, but he declined to agree to the penalty overtime request. A further meeting of the carpenters' union was called for June 9 to discuss the situation, and it was anticipated that the matter will be amicably disposed of.

### Settlement of Dispute as to Wage Reduction for Coal Miners in Nova Scotia

The proceedings following the report of the Royal Commission on Coal Mining in Nova Scotia, appointed by the Provincial Government, were outlined in the issues of the LABOUR GAZETTE for April and May, the text of the Commission's report having appeared in the March issue. The miners had voted on March 14 against accepting a reduction in wages of ten per cent for those paid by the day and twelve and one-half per cent for those paid by the ton, yard, etc., as recommended by the Commission for the employees in the mines of the Dominion Steel and Coal Corporation (successor to the British Empire Steel Corporation). The reduction was made effective March 15. A special district convention was summoned for April 18 at New Glasgow. The executive was authorized to negotiate again with the employer for a wage increase and to take a strike vote if the

negotiations should be unsuccessful. Early in May the executive met the officials of the corporation and were informed that the wage reduction must remain in effect. A ballot of the miners in the various locals was taken on May 26 and resulted in a majority in favour of accepting the reduction, the totals being 5,198 for and 1,298 against. Only one local gave a majority against acceptance. Three important locals in the Glace Bay sub-district, having about 3,000 members, under the constitution of the union, were debarred from voting owing to being in arrears for dues, but prominent members of these locals stated to the press that the majority in these locals would have voted against a strike. Early in June the district officers met the officials of the corporation to sign the new agreement on the basis of the recommendation of the Commission.

### Arbitration in Disputes as to Wage Reductions for Clothing Workers in Toronto and Hamilton

Under the terms of the agreements between employers and the union, the Amalgamated Clothing Workers of America, two disputes as to wage reductions were settled recently by arbitration, Mr. H. G. Fester, member of the Ontario Minimum Wage Board, being Impartial Arbitrator, under the terms of the agreements.

In Hamilton the dispute involved one firm and the local branch of the union, the employer proposing reductions in piece-rates on certain operations owing to keen competition in a slack market. The union contended that certain concessions had already been made and that further reductions would impair the standard of living of the workers. The

Arbitrator decided upon a revised scale which lowered the rates for approximately one-half of the operations, many of the reductions being ten per cent, while in a few cases the change was greater and in a number very slight. In one instance the rate was increased. The revised scale became effective from April 23, 1932.

In Toronto the dispute involved the members of the Associated Clothing Manufacturers of Toronto and the Toronto locals of the union. The Arbitrator decided that conditions in the industry warranted a reduction in wages of ten per cent on all operations, effective June 6, 1932, the decrease to be not greater in any

instance and in no case should the reduction be applied to operations engaged in by females whose normal full time earnings did not exceed the legal minimum wage levels established for Toronto by the Ontario Minimum

Wage Board. The Arbitrator also decided that the rates established by the arbitration should continue in force until May 1, 1933, and that no further general reduction was to be requested during such period.

## ALBERTA LABOUR DISPUTES ACT

### Report of Board of Conciliation and Investigation in Dispute in the Printing Industry at Calgary

**I**N the matter of The Labour Disputes Act, and in the matter of a dispute between the Albertan Publishing Company, Limited; Caniff-O'Brien Printing Company; S. Burnand; A. J. Davis Printing Company, Limited; John Dishmont; A. F. Hickey; Phoenix Press Company; West Printing Company, Limited; Western Printing and Lithographing Company, Limited; and Examiner Press; and Typographical Union No. 449, Calgary, Alberta, and in the matter of a certain Board of Conciliation and Investigation, members: Angus J. Morrison, of Calgary, Alberta, representative appointed by the Employees, J. W. Dingle, Calgary, Alberta, representative appointed by the Employers, and Leonard W. Brockington, Esq., K.C., Chairman.

On the 4th of March, 1932, there was set up a Board of Conciliation and Investigation to consider the dispute between the above-mentioned employers and Typographical Union No. 449, Calgary.

The dispute centred around the failure of the parties to negotiate a renewal of a certain agreement between them respecting wages and working conditions which agreement expired on the 28th day of January, A.D., 1932.

The Board held three public meetings, and a considerable number of private meetings with representatives of both parties, and sometimes with representatives of the individual parties. At the public hearings the employers, while formally asking for a reduction of 15 per cent in wages, expressed their willingness to accept a reduction of 10 per cent. According to the evidence submitted, the printing industry faces adverse conditions due to the general depression and to the special economic conditions of the industry itself. The special condition is due largely to a threefold disastrous competition, and the failure to obtain any reduction in the price of materials. The competition consists, firstly, of extreme price cutting between employers themselves; secondly, of the alleged and admitted ability of what are called "one man shops" to take advantage of the situation;

and, thirdly, of successful canvassing from extra-provincial points.

The Board is happy to announce that the parties have agreed, after representations, to settle their present difficulties on the following terms:—

1. The establishment of a basic minimum wage of 92 cents. This represents a reduction of 8 per cent from the previous wage schedule.

2. The fixation of the wage basis retroactively from the 2nd of May.

3. An agreement for an indeterminate period subject to thirty days' notice from either side.

4. As an evidence of mutual goodwill, and with a desire for mutual co-operation, the parties have agreed to set up a joint committee consisting of three from each side, which committee will meet periodically, and suggest plans and remedies for the mutual protection and the advancement of the interests of both employer and employee. As a result of the Board's investigation, it is strongly of the opinion that something can and should be done along these co-operative lines to rescue the industry from its present precarious position.

A. J. MORRISON,  
Employees' Representative.

J. W. DINGLE,  
Employers' Representative.  
LEONARD W. BROCKINGTON,  
Chairman.

During the month of May a total of 2,889 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 12 of which were fatal cases; in Schedule 2 industries 178 accidents were reported including 4 fatal cases; and 218 accidents to employees of the Crown, 2 of which were fatal, were reported during the month making in all 3,285, of which 18 were fatal.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1932

THE following table shows the number of disputes, workers involved and time loss for May, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1932...	13	1,521	31,905
*Apr. 1932....	11	1,413	34,556
May, 1931....	14	1,184	14,045

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Little change appears in the number of disputes and in the number of workers involved, and the increase in time loss shown for April and May, 1932, was due to strikes involving some 1,400 coal miners in the Crow's Nest Pass District of Alberta.

Nine disputes, involving approximately 1,300 workers, were carried over from April. A dispute involving carpenters at Toronto, Ont., was reported as terminated too late to be so recorded in the figures for April, and information as to a dispute involving plumbers at Saskatoon, Sask., was received too late for inclusion in the May issue of the LABOUR GAZETTE. Four disputes commenced during May. Of the thirteen disputes in progress during the month nine were recorded as terminated, five being in favour of the employers involved, two in favour of the workers concerned and two resulting in compromises. At the end of May, therefore, there were four disputes recorded as strikes or lockouts in progress, namely: coal miners, Blairmore, Alta., coal miners, Bellevue, Alta., lithographers, Toronto, Ont., and motion picture projectionists, Winnipeg, Man.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo-engravers, Toronto, Ont., March 23, 1931, one employer; photo-engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Montreal, P.Q., August 27, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; and compositors, Saskatoon, Sask., December 14, 1931, one employer. The dispute involving sawmill workers at Barnet, B.C., which commenced September 23, 1931, in the establishment of one company, which has been carried in the above list since January, 1932, is recorded as having lapsed by the end of May. The dispute involving lumber workers employed by one firm near Campbell River, B.C., commencing December 3, 1931, and carried in the above list since March, 1932, is similarly reported to have lapsed by the end of the month.

A cessation of work involving about 60 coal miners in one colliery at Joggins, N.S., about the end of May, owing to a wage reduction, has been reported, but particulars have not yet been received.

A strike of carpenters in Toronto, Ont., employed on one building, commencing on April 20, 1932, to secure overtime rates on Saturday mornings as under the agreement providing for the forty-hour week, was reported in the May issue of the LABOUR GAZETTE as being unternminated at the end of April. Information was received later in May that the dispute had terminated on April 27, 1932, the strikers having secured their demands.

A number of disputes were reported during the month involving men on unemployment relief work, who were in all cases receiving subsistence for which some work was performed or might be required. As no relation of employer and employee was involved, these are not included in the record. No disputes involving unemployment workers, employed at stated wages, have been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

LUMBER WORKERS, CAMPBELL RIVER, B.C.—  
The strike of lumber workers employed by one firm operating near Campbell River, B.C., commencing on February 6, 1932, is recorded as having lapsed during May, no informa-

tion being available that employment conditions were still affected. Early in the dispute the employer claimed that a number of the strikers had returned to work and that others had been replaced.

### STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to May, 1932.			
LOGGING— Lumber workers, Campbell River, B.C.....	50	250	Commenced Feb. 6, 1932; for increase in wages and reduction in board; lapsed by May 31, 1932.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Blairmore, Alta..	300	7,800	Commenced Feb. 23, 1932; against dismissal of worker; untermiated.
Coal miners, Bellevue, Alta...	330	8,580	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore Feb. 23; untermiated.
Coal miners, Coleman, Alta...	325	6,825	Commenced Mar. 18, 1932; against alleged unfair distribution of work; terminated May 26, 1932; in favour of employer.
Coal miners, Coleman, Alta...	300	6,300	Commenced Mar. 19, 1932; in sympathy with miners on strike at Coleman Mar. 18; terminated May 26, 1932; in favour of employer.
MANUFACTURING— Textiles, Clothing, etc.— Cap and millinery workers, Montreal, P.Q.....	7	70	Commenced Apr. 9, 1932; against reduction in wages; terminated May 12, 1932; in favour of employer.
Printing and Publishing— Lithographers, Toronto, Ont...	8	200	Commenced Apr. 15, 1932; against reduction in wages; untermiated.
CONSTRUCTION— Buildings and Structures— Plumbers, Saskatoon, Sask....	7	42	Commenced Apr. 11, 1932; against alleged violation of agreement; terminated May 9, 1932; in favour of workers.
Carpenters, Toronto, Ont.....			Commenced Apr. 20, 1932; for overtime rates after 40 hours work according to agreement; terminated Apr. 27, 1932; in favour of workers.
SERVICE— Recreational— Motion picture projectionists, Winnipeg, Man. ....	3	78	Alleged lockout; commenced Feb. 27, 1932; re union working conditions; untermiated.
(b) Strikes and Lockouts Commencing during May, 1932.			
MANUFACTURING— Fur, Leather and Other Animal Products— Fur factory workers, Toronto, Ont.....	31	310	Commenced May 17, 1932; against discharge of worker; terminated May 27, 1932; in favour of workers.
CONSTRUCTION— Buildings and Structures— Electricians, bricklayers and plasterers, Halifax, N.S.....	65	500	Commenced May 2, 1932; against reduction in wages; terminated May 12, 1932; in favour of employer.
Plumbers, Calgary, Alta. ....	45	450	Commenced May 2, 1932; against reduction in wages; terminated May 15, 1932; compromise.
Plumbers, Edmonton, Alta....	50	500	Commenced May 9, 1932; against reduction in wages; terminated May 20, 1932; compromise.

**COAL MINERS, BLAIRMORE AND BELLEVUE, ALTA.**—As reported in the last issue of the *LABOUR GAZETTE*, negotiations for a settlement of these disputes, commencing on February 23, 1932, and February 24, 1932, at Blairmore and Bellevue respectively, were arranged for May 6. It was reported that the management refused to negotiate with the committee of the union to which the strikers belonged, the Mine Workers Union of Canada, but stated its willingness to sign an agreement with a purely local union providing for the same wages as before. A disagreement occurred, however, in regard to a clause proposed by the management governing the layoff of men when necessary to reduce staff. The miners contended that work should be equally divided among all employees, a demand said to be connected with the cause of the dispute at Blairmore which was the dismissal of one employee, the dispute at Bellevue being sympathetic. An announcement that the mine was closed indefinitely was posted at the entrance to the Bellevue Mine. On March 13 five persons arrested in connection with a disturbance on May 4 were committed for trial on charges of assault and unlawful assembly, and were released on bail. The union organizer was arrested on a charge in connection with the same disturbance. At the end of the month no termination had been reported.

**COAL MINERS, COLEMAN, ALTA.**—The two strikes commencing March 18, 1932, and March 19, 1932, involving employees of two mining companies at Coleman, Alta., terminated on May 26. The operators had refused to negotiate with representatives of the Mine Workers' Union of Canada which had called these strikes in violation of the existing agreement. A number of the miners broke away from the union and organized a local union under the name of the Coleman Miners' Association. Agreements were then signed between each company and a committee of its employees which provided for the renewal of the wages and working conditions in force prior to the strike until March 31, 1934, with the following additional clause: "That the check-off shall be for a maximum amount of fifty cents per pay period; and that such check-off funds shall be used for local purposes only; and the two foregoing provisions shall be subject to change only by mutual agreement and arrangement between the parties hereto." As a result of a disturbance at a meeting of miners on May 17 three men were arrested and charged with assault.

**CAP AND MILLINERY WORKERS, MONTREAL, P.Q.**—This dispute commencing on April 9, 1932, in one establishment in Montreal, the workers protesting against a reduction in wages, was terminated early in May, the union having reported it lapsed.

**PLUMBERS, SASKATOON, SASK.**—Plumbers employed on one building in Saskatoon ceased work on April 11, 1932, in protest against a reduction in wages from \$1.30 per hour to \$1, contrary to the agreement between the union and the master plumbers' organization. Work was resumed on May 9, 1932, the employer, an outside firm, agreeing to abide by the local agreement.

**FUR FACTORY WORKERS, TORONTO, ONT.**—A number of employees in one establishment ceased work on May 17, 1932, following the discharge of one employee. The resident conciliation officer of the Department was asked to mediate and later the dispute was settled by negotiations between the parties, all the strikers being reinstated, as well as the worker over whom the dispute arose, and work was resumed on May 28. An account of the dispute appears in another article.

**ELECTRICIANS, BRICKLAYERS AND PLASTERERS, HALIFAX, N.S.**—A strike involving electricians, bricklayers and plasterers in Halifax, commencing May 2, 1932, against reductions in wages was settled as a result of conciliation by officers of the Department. An account of this appears in another article. The bricklayers resumed work on May 6, the plasterers on May 9, and the electricians on May 12, 1932, at the rates offered by the employers immediately before the strike, the employers having agreed that in 1933 negotiations would be on the basis of the 1931 wage scale.

**PLUMBERS, CALGARY, ALTA.**—Plumbers and steamfitters employed by members of the master plumbers' organization in Calgary ceased work on May 2, in protest against a reduction in wages from \$1.25 per hour to \$1 per hour proposed by the employers for the new agreement. On May 16 work was resumed, an agreement having been reached providing for a rate of \$1.05 per hour for one year with the five-day week, and eight-hour day as in the previous year.

**PLUMBERS, EDMONTON, ALTA.**—Plumbers and steamfitters in all plumbing shops in Edmonton ceased work on May 9, 1932, protesting against a decrease in wages from \$1.20 per hour to \$1 proposed by the master plumbers for the new agreement. On May 20, following mediation of the conciliation officer of the Department of Labour, work was resumed under an agreement for one year providing for \$1.05 per hour and the forty-four hour week as before.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

Revised figures for the year 1931 show the number of disputes beginning in the year as 420, the number of workers involved in all disputes in progress during the year as 491,800, with a time loss of 6,983,000 working days for the year.

The number of disputes beginning in April, 1932, was 35 and 11 were still in progress from the previous month, making a total of 46 disputes in progress during the month, involving 12,500 workers and resulting in a time loss of 58,000 working days for the month.

Of the 35 disputes beginning in April, 15 were over wage reductions, 10 over other wage questions, one over a question of working hours, 4 over questions respecting the employment of particular classes or persons, 4 on other questions of working arrangements and one was a sympathetic dispute. Settlements were reached in 29 disputes, of which 5 were in favour of workers, 15 in favour of employers and 9 ended in compromises. In three other disputes, work was resumed pending negotiations.

### Czechoslovakia

The dispute in the North-West Bohemian coalfield, which began March 23 and was mentioned in the last issue of the LABOUR GAZETTE, was terminated April 19. The immediate cause of this dispute had been the proposed closing of a certain mine, but employers agreed to postpone this until the end of the year and also agreed that no large number of miners were to be dismissed until that time.

### Denmark

About 4,000 employees of bacon factories were involved in a lockout from April 29 to

May 11, when work was resumed with a reduction in wages of approximately 3 per cent.

### France

Several thousand workers in the wool textile industry at Vienne, Isère, were on strike from March 1, to April 22, against proposed reductions in wages. It was agreed to reduce wages 6.85 per cent with this reduction to apply only to employees working 30 hours per week or more.

### Japan

During 1931, the number of disputes reported was 2,146, involving 141,685 workers, as compared with 1,823 disputes and 122,413 workers in the year 1930.

### United States

The number of disputes beginning in March was 48 and 38 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 13,737, with a time loss of 792,362 working days.

No reports have been received of settlements of the disputes in the bituminous coal mining industry in Illinois, Indiana, Ohio and West Virginia, which were reported in the LABOUR GAZETTE, April and May.

A strike of about 30,000 building trades workers in New York City was in progress from May 2 until May 18, against proposed reductions in wages. Agreements were then signed which were to be in effect until December 31, 1933, and which provided for wage reductions of from 20 to 30 per cent.

Operations have commenced at the new plant of the Domestic Winery and By-Products, Limited, Kelowna, British Columbia, and the first samples of the various beverages turned out are stated to be quite up to expectations. Cull apples, of which a plentiful supply is available in the Okanagan Valley, are used to obtain the juices, and the blending and colouring is done with wine made from Concord grapes. The machinery for the new plant was imported from Italy and the wine is being made under the Italian Monti process. An Italian chemist is in charge of operations. The production of wine is expected to be an important factor in utilization of Okanagan apple crops.

## OLD AGE PENSIONS IN CANADA

### Statistical Summary of Administration during First Three Months of 1932 and Since Inception of the System

THE accompanying tables give particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the first three months of 1932, and since these Acts became severally effective. Similar tables, bringing the statistics down to December 31, 1931, were given in the LABOUR GAZETTE, February, 1932. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted and given effect to special legislation for this purpose.

These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has

TABLE I.—FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31, 1932

	Alberta — Act effective Aug. 1 1929	British Columbia — Act effective Sept. 1, 1927	Manitoba — Act effective Sept. 1, 1928	Ontario — Act effective Nov. 1, 1929	Saskatche- wan — Act effective May 1, 1928	Northwest Territories — Order in C. effective Jan. 25, 1929	Totals

resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

### Increase in Dominion Contribution

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-

half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure. Accordingly new agreements between the Dominion and Provincial Governments under the provisions of the amending Act were completed recently, as stated in the last issue of the LABOUR GAZETTE, page 517. That issue also contained the text of the Old Age Pensions regulations, as recently revised. Table 1, which follows, shows that arrears resulting from the increase of the Dominion contribution were paid to the provinces back to November 1, 1931; and

A recommendation of the civic fair wage officer, of Toronto, that 60 cents an hour be the standard minimum rate paid workers employed by firms on city contracts was rejected on June 8 by the Board of Control. A minimum rate of 50 cents was suggested by the board in referring the schedule back for re-drafting.

## International Federation of Trade Unions

An economic congress was held at Geneva during April, under the auspices of the International Federation of Trade Unions, to deal with the present world-wide depression and unemployment. Representatives of 21 affiliated national organizations, including Canadian, and seven non-affiliated national organizations, attended the Congress. The President of the I.F.T.U., Mr. W. M. Citrine, in his opening address, stated that the principal object of the Congress was to draw up a program for dealing with the crisis, the essential points of which would be the creation of work for the unemployed and the establishment of a 40-hour week, with the maintenance of wage standards.

It was resolved to publish a manifesto addressed to the workers of the whole world, a summary of which is given below.

In view of the extent and intensity of the depression and of unemployment, and in view of the obvious impotence of capitalism to remedy the position, the application of the immediate and future solutions demanded by the organized world proletariat is becoming more and more urgent.

Special emphasis is laid on the reduction of hours of work to 40 in the week, the maintenance of wages, and the increase of the consuming capacity of the masses. Special importance is also attached to an extensive scheme of national and international public works for the provision of work for millions of unemployed persons. A proper organization and strict supervision of international credit policy, in conjunction with the efforts to put an end to the senseless waste of armaments expenditures, should provide the necessary means of financing these proposals.

The betterment of the economic position cannot be achieved as long as the serious political questions of Reparations and international debts have not received a final and satisfactory solution requiring the responsible States to initiate a system of scientific organization of the principal branches of production and international trade, with the co-operation of the workers' organizations. This necessary transformation requires a simultaneous development of the influence of public authorities in every field of economic life, and also an effective supervision by the democratic organs of the community.

The Congress also emphasized its unanimous desire to struggle for all the measures necessary to protect and relieve the masses suffering from the depression. Unemployed persons must have the benefit of unemployment insurance in all countries and without exceptions. Attacks against social insurance must be vigorously resisted. The workers' organizations must everywhere be entitled to develop in freedom their activities for the defence of the workers. Freedom of association and freedom of opinion are among the methods of action of the proletariat, and are at the basis of any true improvements in the conditions of the working class.

## LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND THE LEGISLATURES OF BRITISH COLUMBIA, MANITOBA AND ALBERTA IN 1932

### Parliament of Canada

THE following is a short summary of the principal measures relating to labour matters which were passed by the Parliament of Canada during its recent session. The session began on February 4 and closed on May 25, 1932.

#### Unemployment Relief

The Relief Act, 1932, authorizes the Governor in Council to enter into agreement with the provinces respecting relief measures therein, and to pay out of the Consolidated Revenue Fund the sums necessary to meet obligations created by such agreements; to provide for special relief work in the national parks and in the drought stricken areas of Saskatchewan; to assist in defraying the cost of the products of field, farm, sea, river and mine; to make loans to, and guarantee repayment of money loaned to, provinces or public corporations and undertakings; and generally to assist the provinces in the relief of distress. The text of the Act was given in the last issue of the LABOUR GAZETTE at page 505.

The Unemployment and Farm Relief Continuance Act, 1932, provides that the Unemployment and Farm Relief Act, 1931, which expired on March 31, 1932, shall be deemed to have continued in force until May 1, 1932.

#### Trade Marks and Union Labels

The Unfair Competition Act is designed to carry into effect the provisions of an International Convention for the Protection of Industrial Property, signed by Canada at The Hague in 1925. The measure deals with trade marks and trade names and repeals the sections of the Trade Mark and Design Act which relate to trade marks and union labels, with the exception of those dealing with criminal proceedings in relation to the improper use of such labels. The new statute, which includes union labels in the definition of "trade mark," provides for the registration of trade marks, and for continuing the existing register under the Trade Mark and Design Act as part of the register maintained under the new law. A design mark may be registered if it is not identical with or similar to one already registered for use in connection with similar wares; is not likely to mislead dealers in and users of the wares as to their character or

quality, or as to the conditions of or the persons employed in their production, or as to their place of origin; or is not such that, by reason of one of the principal characters being a representation of something which obviously suggests a word mark already registered for use in connection with similar wares, it is likely that such word mark, or some word resembling the same, would be used to describe or define the wares in connection with which the design mark is used. Certain specified exceptions are made to these rules. Application for registration must be made to the Registrar and must contain a statement of the date from which the applicant, or named predecessors in title, has used the mark for the purposes defined in the application, and of the countries in which the mark has been principally used since that date; a statement that the applicant considers that, having regard to the provisions of the Act, he was and is entitled to adopt and use the mark in Canada in connection with the wares described; and the address of the applicant's principal office or place of business in Canada or, if he has none, the address of his principal office or place of business abroad and an address in Canada to which correspondence, etc., may be sent. If the mark is intended to indicate that the wares in association with which it is used have been produced under defined working conditions or by a defined class of persons, the application shall so indicate, and shall contain a statement that the applicant is not engaged in the manufacture, sale, leasing or hiring of wares, similar to any wares in association with which the mark is used; and an exact definition of what the use of the mark, in association with wares is intended to indicate in respect of the working conditions under which or the class of persons by whom they have been produced. An application by a trade union for the registration of a trade mark shall contain, or be accompanied by, evidence that its existence is not contrary to the laws of the country in which its headquarters are situate. A registered trade mark may not be assigned or transmitted except in connection, and concurrently, with the good-will of the business carried on in Canada in association with the wares for which such mark is registered. Provision is also made for cancellation of registration.

### **Fraternal Organizations**

The Insurance Act was repealed and replaced by three statutes dealing respectively with the Department of Insurance, British and Canadian insurance companies, and foreign insurance companies. The Foreign Insurance Companies Act provides for the registration and inspection of, and deposit of securities by, foreign insurance companies doing business in Canada. The Act contains a clause exempting from its provisions any society or organization of persons which was exempted under Subsection 2 of Section 3 of the Insurance Act. Subsection 2 authorized the Treasury Board to exempt any society or organization of persons for fraternal, benevolent, industrial or religious purposes, granting life, accident, sickness or disability insurance to its own members exclusively.

An amendment to the Act incorporating the Frontier College was summarized in the *LABOUR GAZETTE*, May 1932, page 527.

### **Wage Deduction for Government Employees**

An Act to provide for the deduction from Compensation in the Public Service makes provision for a deduction of ten per cent from the salaries or wages of employees in the public service for the fiscal year ending March 31, 1933. Exception is made of the Governor General, the Lieutenant-Governors of the provinces, members of the judiciary, the naval, military, and air forces and the Royal Cana-

dian Mounted Police. Members and employees of all Government Commissions, Boards, etc., are included, with the exception of the Canadian National Railways. Indemnities of Members of the House of Commons and Senate for the Session just ended are also reduced by ten per cent. By an amendment to the Income War Tax Act, however, members of the judiciary and members of the naval, military and air forces and of the Royal Canadian Mounted Police, other than enlisted men, are liable to a special tax of ten per cent on salaries paid them by the Dominion of Canada for the fiscal year ending March 31, 1933.

A Bill which was introduced but was not passed would have amended the Railway Act to forbid a company to make any change in the routing of traffic, or to run crews through divisional points where their homes are established, or to make any other change involving the removal of employees, without the consent of the Board of Railway Commissioners. Thirty days' notice to employees of any such change was provided for as well as such compensation for financial loss as the Board deemed fit. The Railway Act already provides for compensation to employees for loss occasioned by the removal, closing or abandonment of any station or divisional point or the creation of a new divisional point.

A resolution relating to the Eight-Hour day Convention adopted on February 17 was given in the *LABOUR GAZETTE*, March, at page, 251.

### **British Columbia**

The Legislature of British Columbia which was in session from February 17 to April 13, 1932, enacted legislation dealing with unemployment relief, workmen's compensation, hours of labour in shops, weekly half-holiday and mothers' pensions.

#### **Unemployment Relief**

The Unemployment Relief Act validates an agreement dated August 19, 1931, between the Dominion government and the government of the Province, making provision for the relief of unemployment, pursuant to the Unemployment and Farm Relief Act passed by the Parliament of Canada in 1931. Agreements between the Provincial government and certain municipalities for the same purpose are also validated. Such municipalities are authorized to borrow, without a vote of the electors, such moneys as are necessary to meet the cost of relief within the scope of the agreement, the money so borrowed to be repaid upon receipt by the municipality of the contributory shares of the Dominion and the Province

toward the cost of relief. Provision is made for the borrowing of money by the Province from the Dominion for expenditure on unemployment relief. The agreements which are set forth in the Schedule to the Act provide that a maximum work day of eight hours shall prevail on works and undertakings carried on thereunder, unless a modification of this requirement is previously agreed to by the Minister of Labour, and for the payment of fair and reasonable rates of wages by the Province and the municipalities, not exceeding the rates required to be paid by the Federal government for the character or class of work in the district. Provision is also made for the use of Canadian materials when available, and the employment of Canadian construction firms. Not less than forty per cent of the amounts expended for public works and highways is to be expended for labour unless a modification of the rule is agreed to by the Minister of Labour. Persons employed must be residents of Canada, and, so far as is practicable, of the locality where the work is

being performed. Discrimination in the employment of any person because of political affiliation, race or religious views is forbidden.

### **Workmen's Compensation**

The Workmen's Compensation Act was amended to empower the Workmen's Compensation Board to assess an industry or plant at a special rate to correspond with the relative accident cost or hazard therein, and to adopt a system of experience-rating or schedule rating, or a combination of these, to take account of the peculiar accident cost or hazard of the individual plant or undertaking of each employer. The Board is authorized to pay for medical aid rendered to a workman on proof of the accident and injury without formal claim being filed by the workman. The Lieutenant-Governor in Council is given power to appoint a competent person to make an actuarial valuation of the assets and liabilities of the Accident Fund and report thereon, the remuneration of such person to be paid by the Board. The Board is authorized to charge any class, sub-class or employer with the cost of any expenditure made under the Act for their benefit, including the cost of investigation, inspections, and other services rendered for the prevention of accidents.

### **Working Hours and Holidays in Shops**

An amendment to the Shops Regulation Act limits the hours of employment of young persons to eight per day and forty-eight per week. Formerly an eleven-hour day was allowed with thirteen hours on Saturdays and a week of sixty-six and one-half hours. A "young person" is defined by the Act as a "boy or girl under the age of 16 years." An application to a municipal council for a by-law fixing a weekly half-holiday must be signed by at least three-fourths of the "licensed occupiers of shops within the municipality under municipal licences issued in respect of those shops." Formerly such petition was required to be signed by three-fourths of the "occupiers of shops within the municipality entitled to vote at municipal elections." A further amendment provides that in every by-law requiring the closing of automobile garages, automobile service or repair shops or gasoline service stations, the municipal council shall make due provision for the accommodation of the public in respect of service required after the hour of closing.

The Weekly Half-Holiday Act was amended to extend the power of the Lieutenant-Governor in Council to revoke or alter any appointment of a day to be observed as a half-holiday in a shop or shops in unorgan-

ized territory. Remembrance Day was added to the list of public holidays enumerated in the Act.

### **Mothers' Pensions**

The Mothers' Pensions Act was amended as from April 1, 1932, to provide that in municipalities the cost of pensions shall be divided between the Province and the municipality. Municipalities having an estimated revenue from assessed taxes on land and improvements of less than \$5,000 per annum are exempt. An applicant for an allowance residing in a municipality must submit her application to the clerk of the municipality.

### **Superannuation Act**

The Superannuation Act was amended to restore the privileges of the Act to contributors who have been dismissed and re-employed within a period of three years. Superannuation of Civil Servants is to remain unaffected by temporary reduction of salary. In the granting of a guaranteed allowance for a term of years provision may be made that, in the event of the death of the contributor before the expiration of the term, payment of the allowance for the remainder of the term shall be made to a person nominated by the contributor prior to the granting of the allowance. In such case if the person nominated survives the contributor the allowance does not form a part of the latter's estate.

### **Housing**

An amendment to the Companies Act authorizes companies to make loans to employees for the purchase or erection of dwelling houses for their own occupation, and for the purchase of shares in the company.

### **Workers' Income Tax**

The Income Tax Act contains a section requiring employers to deduct one per cent from the wages of their employees and forward the amount to the Commissioner of Income Tax, together with a return showing the amount of wages paid employees, the amount deducted therefrom and any other information required by the Commissioner. The amounts deducted are considered to be part payment of the income tax of the employee, and if the income is not taxable or the deduction is in excess of the tax a refund will be made. No deduction is made from the wages of occasional employees employed in connection with the employer's domestic establishment if the wages paid during the period of employment do not exceed \$5.

### **Chauffeurs' Licences**

An amendment to the Motor Vehicle Act provides for suspension of a driver's licence for certain offences pending proof of financial responsibility. Where a person whose licence has been suspended was, at the time of the

accident from which his liability for damages arose or the offence for which he was convicted, employed as a chauffeur or otherwise and is not himself the holder of an owner's licence, proof of financial responsibility may be accepted from the owner.

## **Manitoba**

The Manitoba Legislature which was in session from February 29 to May 7, 1932, enacted a number of laws of labour interest, including a new statute dealing with unemployment relief, and amendments to acts relating to Workmen's Compensation, builders and workmen, old age pensions, and chauffeurs.

### **Unemployment Relief**

An Act respecting Unemployment Relief ratifies an agreement, dated September 1, 1931, between the Dominion Government and the Government of the Province providing measures of unemployment relief pursuant to the Unemployment and Farm Relief Act, 1931, enacted by the Parliament of Canada. Provision is made for the borrowing of money by the Province from the Dominion for expenditure for unemployment relief purposes, including loans to municipalities in order that their share of the cost of direct relief may be paid. A number of Orders in Council for raising and expending money are also confirmed. Municipalities are empowered to borrow money by by-law for the purpose of paying their share of relief. The Lieutenant Governor in Council is authorized to make further agreements with the Government of Canada, whether pursuant to the Unemployment and Farm Relief Act or not, for the purpose of relieving distress and providing employment. The Schedule to the Act contains the agreement of September 1, 1931, which is similar in form to that contained in the Schedule to the Unemployment Relief Act of British Columbia described under that heading.

### **Workmen's Compensation**

The section of the Workmen's Compensation Act relating to hernia was amended by the addition of a clause which provides that in case of pre-existent hernia which becomes strangulated by strain or accident arising out of and in the course of the employment, or in case there has been excusable failure on the part of the workman to make the required report, the Board may order payment of a claim if it be of the opinion that it is a just one and ought to be allowed.

### **Building Trust Funds**

An amendment to the Builders' and Workmen's Act provides that all sums received by a builder, contractor, or sub-contractor on account of the contract price shall constitute a trust fund for the benefit of the proprietor, builder or contractor, sub-contractors, Workmen's Compensation Board, workmen, and persons who have supplied material on account of the contract. The builder, contractor or sub-contractor is the trustee of all sums so received by him, and until all workmen and suppliers of material and all sub-contractors are paid for the work done or material supplied and the Workmen's Compensation Board is paid assessments, the trustee may not appropriate any part of the moneys to his own use or any use not authorized by the trust.

### **Old Age Pensions**

An amendment to the Old Age Pensions Act authorizes the Lieutenant-Governor in Council to enter into an agreement with the Governor General in Council for the payment by the Dominion of an increased proportion of the amount payable for old age pensions. In case the proportion paid by the Dominion is increased, the levies to be made upon the municipalities and school districts in unorganized territories shall be correspondingly reduced.

### **Wages and Hours for Public Motors**

New sections were added to the Highway Traffic Act dealing with public service and commercial vehicles and giving certain powers to the Municipal and Public Utility Board including the regulation of hours of employment and rates of wages of employees of motor carriers of public service vehicles and to fix the maximum hours of employment and minimum rates of wages of such employees.

### **Pensions for the Blind**

Two resolutions dealing respectively with unemployment insurance and pensions for the blind were given in the LABOUR GAZETTE for May at page 542. A further resolution

was adopted by the Legislature on April 5 as follows:—

Resolved that whereas the Legislature of Manitoba has petitioned the Federal Government each year since the year 1926 to inaugurate a pension fund for needy blind persons; whereas in the session of 1930 the Legislature petitioned the Federal Government to amend the Old Age Pensions Act so as to apply to blind persons at an earlier age and in more liberal amount than sighted persons; thereby undertaking to pay its share of said pension fund; whereas on February 24, 1931, the Legislature again petitioned the Federal Government to immediately grant a pensions scheme either by amending the Old Age Pensions Act, or by the passing of a Blind Persons Pension Act, so that pensions for the blind might become a reality without delay; and whereas Premier R. B. Bennett, speaking in Parliament, July 20,

1931, stated in part as follows: "As far as the blind are concerned I think there is a universal feeling that if the provinces treated them as being eligible for pension before the age of seventy (70) and asked for co-operative action on the part of the Dominion, such action would be taken, but no province has made that request or taken the initial step of providing for such pensions, although there lies the liability." Therefore be it resolved, that the Legislature of Manitoba again forward a memorial to His Excellency the Governor General of Canada, urging upon His Excellency the increasing urgent necessity for such a pension scheme, financed in whole or in part by the Federal Government; and praying that His Excellency may be pleased to cause such legislation as may be necessary for the granting of such a pension scheme to be brought before the Parliament of Canada at the earliest possible moment in the present session.

## Alberta

The Alberta Legislature was in session from February 4 to April 6, 1932, and enacted laws dealing with unemployment relief, workmen's compensation and child welfare.

### Unemployment Relief

The Unemployment Relief Act, 1932, validates an agreement between the Dominion Government and the Government of the Province as to unemployment relief pursuant to the Unemployment and Farm Relief Act, 1931, passed by the Government of Canada. The Lieutenant-Governor in Council is empowered to enter into similar agreements with the Government of Canada at any time before the next session of the Legislature and to provide for the payment of any expenses incidental thereto, and also to enter into any agreements with the municipalities required by, or incidental to that entered into with the Government of Canada. A municipality is authorized to borrow against any contributory share payable under any agreement between the municipality and the province. The schedule to the Act contains the agreement between the Dominion Government and the Government of the Province, which is similar to those contained in the Unemployment Relief Acts of British Columbia and Manitoba, noted above.

### Workmen's Compensation

The Workmen's Compensation (Accident Fund) Act was amended following the report of a Special Committee of the Legislature appointed during the previous session (LABOUR GAZETTE, April, 1931, page 389). Provision is made for a super-assessment, not exceeding 33½ per cent of the ordinary assessment, on an employer whose account shows an amount

chargeable in excess of a sum equal to the amount of his ordinary assessment plus five per cent. Every company must include upon the payroll every person employed as a workman even if it is under no obligation to pay such person any wages or salary, and the Board is authorized to fix a sum not exceeding \$2,000 per annum, representing the wages or salary of such person.

A police officer sustaining personal injury by accident while journeying from his place of abode to any place for the purpose of reporting for duty, or *vice versa*, is deemed to have sustained such injury by accident arising out of and in the course of his employment.

The Board is authorized to enter into agreements with the Boards of other provinces providing for compensation to workmen whose work is performed partly in Alberta and partly in another province.

Sundays and legal holidays are excluded from the computation of the period of seventy-two hours within which notice is required to be given in hernia cases.

When a workman has been permanently disabled and desires to be trained for a new vocation or to submit himself to special treatment for the purpose of removing any handicap resulting from his injuries which prevents him from following his original vocation, the Board may take such measures and make such expenditures as it may deem necessary or expedient. Such expenses are to be paid from the Accident Fund, the total amount paid in any one year being limited to \$20,000. Where the workman has been awarded compensation for permanent disability and takes advantage of the benefits of the above provision the compensation payable to him shall be subject to diminution if his earning power

is substantially increased. Provision is made for the repair, maintenance and renewal of apparatus furnished to injured workmen, the cost after one year being defrayed out of the medical aid fund.

Where the Board advances a lump sum to a workman, as provided in the Act, such sum is to be chargeable against the compensation payable to the workman.

When application is made by a dependant or by a workman suffering from permanent partial disability to commute payments for the purpose of residing outside of Canada, the Board may, in lieu of commuting the full capitalized value of the payments, award such lesser sum as, according to the conditions and cost of living in the proposed place of residence, will, in the opinion of the Board, maintain such dependants or workman in the same degree of comfort as they would enjoy had they remained in the province and received full compensation.

Compensation for permanent total disability sustained on or after April 1, 1932, shall be a weekly payment for life equal to 66⅔ per cent of the average weekly earnings of workmen employed at similar work in the same occupation as shown by the records of the Board for the eight consecutive years immediately preceding the first day of January preceding the date of injury. Compensation for permanent partial disability sustained after April 1, 1932, shall be a weekly payment for life equal to 66⅔ per cent of the difference between the average weekly earnings of workmen employed at similar work in the same occupation as shown by the records of the Board for the eight consecutive years immediately preceding the first day of January preceding the date of injury, and the average amount which he is earning, or is able to earn, after the accident. In temporary total disability compensation shall be a weekly payment of 66⅔ per cent of the average weekly earnings of the workman.

Employers are required to keep records of all cases in which first aid treatment has been given to a workman for injuries.

Restaurants and retail shops are added to the schedule of industries covered by the Act, and the Board is given power to decide whether any establishment is or is not a restaurant or a retail store as so defined.

#### Child Welfare, Etc.

An amendment to the Child Welfare Act extends the term "neglected child" to include any girl, any boy under 12 years of age, and any boy between 12 and 14 years of age, unless

he has the consent of parent or guardian, who is found peddling or selling newspapers or other articles or distributing advertising matter for hire or reward in any street or public place at any time, day or night. The term "truant child" has been extended to include any child between the ages of seven and fifteen years who does not attend school regularly.

The Game Act requires guides to be licensed and authorizes the Lieutenant-Governor in Council to make regulations for the issuing of guides' licences.

The Income Tax Act provides that the income of labour organizations shall not be liable to taxation thereunder.

#### Resolutions

Resolutions adopted by the Legislature (dealing with unemployment and health insurance and with mothers' allowances, and coal mining) were given in the April and May issues of the LABOUR GAZETTE at pages 411 and 541 respectively. A further Resolution was unanimously adopted on April 6 as follows:

That in the opinion of this Assembly the Government should request the Dominion Government to so amend The Old Age Pensions Act so as to make provision for pensions for the blind.

The *Contract Record and Engineering Review*, published by the Canadian Construction Association, calls attention in its issue for June 8 to a recent statement by president T. H. Cutler, of the American Road Builders' Association, that 9,000 men can be given employment for a year by the expenditure of one million dollars on road work. "Figures of the United States Bureau of Public Roads indicate that in 1931 direct employment on state road undertakings was equivalent to 3,000 men per year for each million dollars spent. The additional 6,000 men for whom work is available would be indirectly employed on the basis of Mr. Cutler's contention that 'it is a commonly accepted figure that two men are employed in the preparation of materials, transportation and similar activities occasioned by highway work in progress for each man labouring directly on the roads.'"

## JURISDICTION OF WORKMEN'S COMPENSATION BOARDS DISCUSSED IN VARIOUS DECISIONS BY HIGHER COURTS

IN view of the recent decision of Mr. Justice de Lorimier declaring the Quebec Legislation establishing a Workmen's Compensation Commission, to be *ultra vires* of the Quebec Provincial Legislature, it may be convenient to refer to some of the cases in which the higher courts have dealt inferentially with the jurisdiction of the Provincial Boards. This jurisdiction has been recognized from time to time in various decisions by the Judicial Committee of the Privy Council and by the higher Canadian courts. It may be noted that the Dominion Parliament clearly recognized the powers of the Provincial Boards by the Act of 1931 amending the Government Employees' Compensation Act, which placed all the salaried employees of the federal government under the jurisdiction of the Workmen's Compensation Board of the province where they are employed.

Some previous decisions are as follows:

### Privy Council

*B.C. Workmen's Compensation Board (appellants) and Canadian Pacific Railway (respondents)* (1920 *English Appeal Cases*, page 184)—

In this case the judgment of the British Columbia Court of Appeal (Mr. Justice McPhillips dissenting) was reversed by the Judicial Committee of the Privy Council. The respondent company was incorporated by a Dominion statute and owned a steamship which plied between ports in British Columbia and ports in the United States. The steamship sank with all hands in waters outside British territory. Under Pt. 1 of the Workmen's Compensation Act of British Columbia (R.S.B.C., 1916, c. 77) compensation was payable by the appellant Board out of an accident fund thereby established to the dependants (whether resident in the province or not) of drowned seamen who had been engaged while resident in the province. The respondents by the Act were contributors to the fund on the basis of the pay-roll of their employees who were within the scope of the Act.

The Privy Council held that the provisions of the Workmen's Compensation Act whereby the compensation was payable were *intra vires* the Provincial Legislature; that they did not derogate from the respondents' right to limit their liability under s. 503 of the Merchant Shipping Act, 1894 (Imp.); and were not inconsistent with the provisions of s. 215 of the Canada Shipping Act (R.S. Can., 1906, c. 113) with regard to the duty of the owner of a Canadian foreign seagoing ship towards injured seamen.

In the course of his judgment Viscount Haldane said: "In their Lordships' opinion, this is not a case in which it is sought to enact any law giving a right to arise from a source outside the province. The right conferred arises under s. 8, and is the result of a statutory condition of the contract of employment made with a workman resident in the province, for his personal benefit and for that of members of his family dependent on him. Where the services which he is engaged to perform are of such a nature that they have to be rendered both within and without the province, he is given a right which enures for the benefit of himself and the members of his family dependent on him, not the less that the latter may happen to be non-resident aliens. This right arises, not out of tort, but out of the workman's statutory contract, and their Lordships think that it is a legitimate provincial object to secure that every workman resident within the province who so contracts should possess it as a benefit conferred on himself as a subject of the province. When he enters into this contract, it also appears to them to be within the power of the province to enact that, if the employer does not fully contribute to the accident fund out of which the payment is normally to be made, the employer should make good to that fund the amount required for giving effect to the title to compensation which the workman acquired for himself and his dependents. The scheme of the Act is not one for interfering with rights outside of the province. It is in substance a scheme for securing a civil right within the province."

*Peter (appellant) and Yorkshire Estate Company, Limited, and another (Respondents)* (1926 *English Appeal Cases*, page 513).

In this case the Judicial Committee of the Privy Council affirmed the judgment of the Court of Appeal of British Columbia.

By Section 12, subsection 3 of the Workmen's Compensation Act of the Province jurisdiction is given to the Board to determine whether an action brought by a workman against "an employer" is one the right to bring which is taken away by Part 1 of the Act. The Court held, on the construction of the Act, that the words "an employer" in the sub-section include any employer within the scope of the Act, whether or not he is the employer of the workman who brings the action.

Viscount Cave, in his judgment, said:—

"The plaintiff, the present appellant, appeared before the Board under protest, and contended, first, that he was not within the Act at all, because he was a travelling salesman and not exposed to the hazards incident to the nature of the work carried on in the industry; secondly, that the defendants were not employers within the meaning of the Act so as to fall within the provisions of s. 12, sub-s. 3; and, thirdly, that in any case s. 12, sub-s. 3, did not on its true construction apply to an action brought by a workman against a person who was not his employer, although he was an employer within the meaning of the Act. The Board decided all those questions against the present appellant. In consequence of that decision the appellant's action has been stayed by the Court of Appeal of British Columbia, and it is against that stay that the present appeal is brought.

"The appellant has raised again, as he was entitled to do, the points which have been mentioned. Their Lordships are plainly of opinion that the first two of these points were finally determined by the decision of the Compensation Board. An affidavit has been filed, but it is subject to objection, and their Lordships do not really know exactly on what material the Board came to its decision on the questions of fact; but whatever the materials before the Board may have been, the Board finally decided, as they were entitled to decide, both that the appellant did come within the scope of the Act, and that the respondents were employers falling within the statute. Those points, therefore, are closed beyond dispute . . ."

"Upon the whole their Lordships are of opinion that the words 'an employer' there occurring (i.e. in s. 12, sub-s. 3) include any employer who falls within the purview of the Act. That view is supported by the circumstance that the Board is by the same subsection authorized to determine whether an action is one the right to bring which is taken away 'by this Part,' that is to say, by any section of this Part of the Act, including s. 11, sub-s. 4. That is the view which was taken by the Court of Appeal of British Columbia, and their Lordships do not see their way to differ from the conclusion of the Court. It follows that this appeal must be dismissed with costs, and their Lordships will humbly advise His Majesty to that effect."

### Supreme Court of Canada

*Lawrence Scotland (plaintiff), appellant, and the Canadian Cartridge Company (defendants), respondents vol. 59, Supreme Court Reports, page 471).*

The plaintiff, working in a munition factory, claimed damages from his employers for injury to his health, caused, as he alleged, by inhaling gas fumes in doing his work. He claimed compensation under the "Workmen's Compensation Act" but the Board held that the injury was not caused by "accident" and that it therefore was without jurisdiction. He then brought an action in which the jurisdiction of the Board was made an issue. On the trial the evidence was conflicting as to whether or not the illness of the plaintiff was caused by poisonous gases, some doctors testifying that it was impossible, others that there could be no other cause. The jury found in favour of the plaintiff and judgment was entered for him for \$3,500. The Appellate Division reversed this judgment and dismissed the action.

The Supreme Court allowed the appeal with costs and restored the judgment of the trial judge.

Mr. Justice Duff in the course of his judgment said: "I refrain from expressing any opinion on the question whether a claim for compensation having been rejected by the Board on the ground that the facts out of which the injury arose did not bring the case within the category of accident, it is open to the employer to allege in an action by the employee based upon the charge of negligence that the same facts did constitute an accident bringing the case within the operation of the provisions of the Act, including subsec. 1 of sec. 15 which on that hypothesis would afford an answer to the employee's action, if such a contention were open to the employer.

"It is unnecessary to pass upon this because, for the reasons given by the Chief Justice, I think the respondents' contention independently of the Board's decision must fail."

Mr. Justice Anglin: "By sec. 6 (1) of the 'Workmen's Compensation Act' the Board is given exclusive jurisdiction to determine all matters and questions arising under Part 1 of the Act. That part deals with workmen's rights to compensation. By sec. 64 the Board is empowered to determine, if an action is brought by a workman against the employer in respect of an injury, whether the workman is entitled to maintain the action or only to compensation under the statute.

"By an amendment (5 Geo. V, ch. 24, sec. 8 (2)), any party to an action is enabled to apply to the Board for adjudication and determination of the question of the plaintiff's right to compensation or as to whether the action is one the right to bring which is taken away by Part 1; and such adjudication and determination is declared to be final and conclusive. The re-consideration by the Board of the plaintiff's application for compensation was at the instance of the present defendant, and I agree with the learned Chief Justice of the Common Pleas that the Board's conclusion that the plaintiff's claim was not founded on a personal injury by accident within the meaning of the Act is binding on the defendant and not open to review in this action."

*Dominion Cannery (appellant) and Horace Costanza and others (respondents)*  
(1923 S.C.R., page 46).

In this case the Supreme Court of Canada dealt with the question of the "exclusive jurisdiction" conferred upon the Workmen's Compensation Board by section 60 of the Ontario Act. The plaintiffs (Costanza, etc.) sued for damages in consequence of having contracted typhoid fever from drinking water supplied by their employers (the defendants). The trial judge held that the injury was not caused by "accident," and that plaintiffs could not proceed under the Workmen's Compensation Act. The Supreme Court stayed proceedings on the appeal to permit of an application being made to the Board under section 15 (2) for its "adjudication and determination . . . as to whether the action is one the right to bring which is taken away" by Part 1 of the Workmen's Compensation Act.

Some of the passages in the judgment of the Court, which deal with the powers conferred upon the Board by the Act, are quoted below:—

*Mr. Justice Anglin.*—"It seems to be quite clear that the question of the plaintiffs' right to bring and maintain this action 'arises under' Part 1 and also that it is 'a matter or thing in respect to which power, authority or discretion is conferred on the Board.'

"In my opinion by giving to the Board exclusive jurisdiction to examine into, hear and determine all such matters and questions the legislature intended to oust and did oust the jurisdiction of the ordinary courts to entertain them, and required that they should be examined into, heard and determined solely by the board.

"In reaching this conclusion I have not forgotten that the jurisdiction of superior courts

is not taken away unless by express language in, or necessary inference from, a statute. I find here a positive and clear enactment that the jurisdiction of the board shall be 'exclusive'—and nothing to warrant a refusal to give to that word its full effect.

"The purpose of the legislature apparently was to secure uniformity in the determination of what classes of cases fall within the operation of the Compensation Act by having a single tribunal deal with that question, and also to ensure that no workman injured in the course of his employment should find himself in the position of having been denied damages by the courts because he was, in their opinion, entitled to compensation under the Act, and refused compensation by the board because he was, in its view, not so entitled . . . .

"The Board in determining that the right of action asserted by a plaintiff has or has not been taken away by s. 15 (1) of the Act or that a plaintiff is or is not entitled only to compensation under the statute, whether on application made under s. 15 (2) or under s. 64 (4), acts judicially. It is empowered to adjudicate upon and finally to dispose of certain rights of the parties."

*Mr. Justice Duff.*—"The autonomy of the board is, I think, one of the central features of the system set up by the Workmen's Compensation Act. One at least of the more obvious advantages of this very practical method of dealing with the subject of compensation for industrial accidents is that the waste of energy and expense in legal proceedings and a canon of interpretation governed in its application by refinement upon refinement leading to uncertainty and perplexity in the application of the Act are avoided. The purport of subsection 1 of section 60 (ascribing to the words their minimum scope) seems to be that as regards any proceeding before the board and for the purpose of any such proceeding in relation to a matter in respect of which jurisdiction is given to the board, that jurisdiction is exclusive and the mastery of the board over its own proceedings is supreme. The act or decision of the board in such a case, to use the language of the section, shall not be open to question or review in any court. Language could not be plainer. . . .

"Nobody indeed can too strongly assert the importance of observing the rules of natural justice in all legal proceedings. Nobody could imagine for a moment that the legislature contemplated the possibility of the board in exercising its judicial or quasi-judicial functions disregarding the rudimentary dictates of fair play. But what seems per-

fectly clear is that the legislation proceeds upon a confident assurance that a tribunal constituted by the Government for the purposes of the Act could be relied upon not to disregard such principles in its proceedings. And I can hardly believe that any tribunal composed of professional men is likely in discharging responsibilities such as those cast upon the board to fail to appreciate the importance of preserving a judicial temper and of performing its duties 'conscientiously with a proper feeling of responsibility.'

"It is quite true that when an action is brought by a workman against his employer in a particular case the question whether or not the action is excluded by the statute is in that particular case a question which concerns the workman and the employer alone; that is to say, it is a question and solely a question whether or not the workman is entitled to be paid and the employer is bound to pay a sum of money. On the other hand, if the question as to what does or does not constitute an 'accident,' if the question whether on a given state of facts an accident has or has not occurred in the course of the workman's employment, or whether the accident does or does not arise out of the workman's employment, if such questions are generally to be passed upon by the Supreme Court with the usual concomitants by way of appeal, it is easy to see the possibility of a jurisprudence arising marked by the not very happy characteristics of that which has grown up out of the English Workmen's Compensation Act. Add to that the possibility of conflict between the decisions of the courts and those of the board and you have potentialities which, at all events, could not be supposed to add to the favourable prospects of the system set up by the statute. Without elaborating the matter further I think there are excellent practical reasons for assuming that the legislature did not contemplate such a duplication of jurisdiction in respect to these questions.

"On the other hand I am quite unable, with great respect to those who take a different view, to escape the conclusion that the statute as originally framed put upon the defendant, the employer, the responsibility of taking necessary steps to enable him to raise the defence. In other words, that the onus was upon him to invoke the jurisdiction given by section 64, subsection 4. There is not a syllable in the statute which suggests that a defendant raising the question by plea, for example, could thereby deprive the Supreme Court of jurisdiction to dispose of the action. The statute gave the defendant the right to get a decision upon the issue raised by such a defence from the board and it would be the

duty of the Supreme Court obviously to give the defendant due opportunity to exercise his right. But the general jurisdiction of the court over the action remains untouched, in my opinion. The statute declares that in given circumstances the action does not lie, not that the courts have no jurisdiction to deal with it, an obviously different thing."

*Mr. Justice Idington.*—"I am decidedly of the opinion that in face of the decision of the board, already made, the matter ends, or should end. And I most respectfully submit that we have no right to criticize or assume that such decision was, or even may have been, arrived at without duly considering the question at every angle, merely because their methods of investigation do not follow our legal forms of doing so. It was to get away from such like forms and methods, and all implied therein, that the statute was enacted.

"The past experience of the members of the board, no doubt, was sufficient guide and we should at least give them credit therefor, and knowledge, by this time, of the Act, superior, I imagine, to ours."

*The Sincennes-McNaughton Lines Limited (defendant) appellant, and Joseph Bruneau (plaintiff) respondent (1924 S.C.R. page 168).*

Chief Justice Sir Louis Davies stated that "the substantial question in this case is whether the Workmen's Compensation Act of the Province of Quebec, so far as it relates to the liability of shipowners to their workmen employed in transportation by water, is *ultra vires* of the Provincial Legislature as being in conflict with the Canada Shipping Act."

The Supreme Court declared that Sections 7321 and 7323 of the Quebec Act, in so far as they affect "workmen, apprentices and employees engaged . . . in any transportation business . . . by water" are *intra vires* the provincial legislatures, as they are not in their operation necessarily in conflict with the provisions of the Canada Shipping Act contained in sections 915 to 921.

#### Exchequer Court

*The Ship Catala (defendant) appellant, and Martha Dagsland (plaintiff) respondent, 1928 Exchequer Court Reports, page 83.*

A workman was killed in a collision between the *Catala* and a boat in which he, with another man, was engaged in fishing. The wife of the deceased (the plaintiff) applied to the Board, under the Workmen's Compensation Act (B.C.) for compensation under

the Act. Payments were made to her from the date of her husband's death until about the time of the trial of this action, which she accepted. After judgment the Board ceased making payments pending the final results of this action.

Upon application of the owners of the *Catala* under sec. 12 (3), the Board "adjudicated and determined" that the owners were employers within the scope of Part 1 of the Act; that the deceased was a workman in an industry covered by and within the scope thereof; that the accident arose out of and in the course of the employment; that plaintiff was one entitled to compensation under the Act, and that the action was one concerning which the right to bring was taken away by part 1 of the Act. After the application aforesaid, plaintiff took action *in rem* in the Exchequer Court in Admiralty to recover damages arising out of the death of her husband as above mentioned.

The Exchequer Court (reversing the judgment appealed from) held that in view of the adjudication by the Workmen's Compensation Board the Exchequer Court had no jurisdiction to hear and determine the present action; and that even if it had jurisdiction, the plaintiff, having elected to claim compensation under the Workmen's Compensation Act (B.C.) and having accepted it, could not thereafter renounce it and resort to an alternative remedy once open to her.

In the course of his judgment the President of the Court, the Hon. Mr. Justice Maclean, observed: "The point has been raised and it is therefore proper for me to say, that under the provisions of the Workmen's Compensation Act of British Columbia, and the principles of common law, it would appear that the respondent is bound by her election to claim compensation under that Act. The act itself is remedial legislation and as such must receive such a beneficent interpretation by the courts as will enable the intention of the legislation to be effectively attained, and I do not think it was the intention of the legislature that a dependent could elect to apply for and receive compensation under the Act, and at the same time pursue a common law remedy. The remedies are alternative and not cumulative."

Elsewhere his Lordship said: "The learned trial judge in his reasons for judgment said it must be conceded that if the Board had

the power to make the adjudication mentioned, this Court could not exercise any further consideration in the action because, it is not only 'forever stayed' but the 'right to bring' the action itself is taken away by the Workmen's Compensation Act. Even if it could be said that the Maritime Conventions Act, and the Admiralty Court Act, 1861, together give jurisdiction to entertain an action, under the provisions of the Families' Compensation Act, then in that view, I think the issue is concluded by *Peter v. Yorkshire Estate Co., Ltd.*, and the right of action if existent at all, is taken away. In that case the Judicial Committee of the Privy Council held that the decision of the Workmen's Compensation Board, that an employee who had brought an action was a workman to whom the British Columbia Workmen's Compensation Act applied, and that the defendant was an employer within the scope of the Act so as to fall within the provisions of s. 12 (3), which took away the right of action, was final and not open to review."

#### Manitoba Court of Appeal

*Foster versus the Canadian Pacific Railway Company* (1926 *Manitoba Law Reports*, vol. 36, page 61).

In the Manitoba Court of Appeal, appeal was taken from the judgment of Mr. Justice Galt, staying an action under Lord Campbell's Act, against the employer of the plaintiff's father. The Court dismissed the appeal with costs, Mr. Justice Fullerton stating as follows:

"By sec. 46 (1) of our Act the Board is given exclusive jurisdiction to examine into, hear and determine all matters and questions arising under the Act and such exclusive jurisdiction includes '(b) the existence of dependency.'

"Sec. 46 (1) of our Act also provides that the action or decision of the board thereon shall be final and conclusive and shall not be open to question or review in any court and no proceedings by or before the board shall be restrained by injunction, prohibition or other process or proceeding in any court or be removable by *certiorari* or otherwise into any court.

"The jurisdiction of this Court to review or interfere with the determination of the board as to the existence of 'dependency' is thus definitely excluded."

## WORKMEN'S COMPENSATION IN ONTARIO AND MANITOBA IN 1931

### Ontario

According to the annual report of the Workmen's Compensation Board of Ontario, accidents during 1931 (the period under review) continued to show a decrease, which is attributed mainly to the decrease in employment in industry throughout the province. The accidents reported in 1931 totalled 52,894 as compared with 69,267 in 1930, a decrease of nearly 24 per cent. All months indicated a decrease, though the greatest number of accidents in any month during the year occurred during July, when 4,945 were reported. Death claims on account of fatal accidents also showed a very substantial decrease from 427 in 1930, to 266 in 1931. Confirming the decreased employment in industry, the provisional payrolls reported to the Board in the industries classed under Schedule 1\* also showed a substantial decrease, being \$409,260,000 for 1931 as compared with \$485,262,000 for 1930. There are no similar data for Schedule 2 and Crown industries as in these the employers pay for the accidents to their own workmen and are not required to make payroll returns or pay assessments on them as under Schedule 1. The Board estimates, however, that the payroll would probably be about one-third of Schedule 1. The number of employers listed in Schedule 1 decreased from 23,912 in 1930, to 23,138 at the end of 1931.

The allowed claims in 1931 numbered 48,882 as against 61,795 in 1930. Out of 43,611 accidents paid for during 1931 in Schedule 1, 22,802 involved medical aid only; 18,271 were temporary disability cases; 2,329 were permanent partial disability cases; 17 were permanent total disability cases; while there were 192 death claims paid. As mentioned previously, death claims paid for fatalities in industries under Schedules 1 and 2 and Crown cases totalled 266 during the year.

**Benefits.**—The total amount of benefits awarded under the Act during the year 1931 was \$6,021,392.10, as compared with \$7,423,018.82 in 1930. Out of the benefits so awarded in 1931, compensation amounting to

\$3,917,045.43 and medical aid amounting to \$1,060,763.01 was awarded in Schedule 1, \$527,758.32 in Schedule 2 industries, and \$515,825.34 in Crown cases. The total benefits awarded from the commencement of the Act to the end of 1931 amounted to \$91,924,617.85, and the total accidents reported during the same period were 928,571.

**Average Rates of Assessment.**—Based on the estimated wage expenditure, the average rate of assessment in all classes in Schedule 1 amount to \$1.22, as compared with an estimated rate of \$1.40 in 1930, and an average of \$1.18 since the commencement of the Act.

**Administration.**—The administration expenses for the year showed a slight increase, the amount for 1931 being \$350,491.05, as compared with \$346,999.73 in 1930, or an increase of \$3,491.32. It was explained that this increase was not due to increase in salaries, as payment for the salaries of the regular staff was decreased, the extra amount being due to payment for special statistical service, which amount was refunded to the Board.

All the administration expenses are now paid by the employers under the Act, without any governmental assistance, and the amount is distributed among Schedule 1, Schedule 2, and Dominion and Provincial Crown cases, in accordance with the work done in each of these classes. The amount charged to the Silicosis Fund was \$41,781.56; to Mine Rescue Work, \$3,193.34; to Schedule 1 employers, \$249,238.86; to Schedule 2, \$28,066.83; to Dominion Crown, \$16,280.79; and to Provincial Crown, \$11,929.67. The total administration expenses for 1931, less expenses of supervising work in connection with silicosis and mine rescue stations (not properly administrative work) and handling claims for silicosis, were 5.07 per cent of all benefits awarded, being 5.01 per cent of benefits awarded in Schedule 1 and 5.39 per cent in Schedule 2 and Crown Cases.

**Funds.**—No further assessment has been required during the year for the Disaster Reserve Fund which was created by the deduction of one per cent from all assessments paid by employers in Schedule 1 so that it might be applied to the relief of any class which might otherwise be too heavily burdened in any year by reason of some catastrophe or heavy disaster. This fund at the end of the year amounted to \$257,303.05

\* Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen, but being assessed to provide a general fund out of which accidents occurring in the several classes of industries throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of accidents are under Schedule 1.

as compared with \$269,498.16 at the end of 1930. It was pointed out that "during the year the only charges made against this fund were for the purpose of relief of the classes affected by injuries to previously injured workmen, the intention being to remove the objection of employers to re-employment of their injured and disabled workmen by putting them in the same position as they would have been had the workmen been uninjured, and charging against the Disaster Reserve Fund the additional cost of carrying such hazard. It is felt by the Board that everything should be done to encourage the re-employment of workmen who have been injured in connection with industry. The amount so charged during the year in respect of pensions charged to the various classes was \$24,966.33."

The amount now standing to the credit of the Pensions Reserve Funds in the different schedules is as follows: Schedule 1, \$19,160,312.72, Schedule 2, \$3,413,358.42, which "represents the actuarial liability outstanding in connection with the pensions which have been actually granted by the Board, and assures to all pensioners the ultimate payment of their claims in full."

The Accident Fund has been maintained at an amount sufficient to set aside the amounts required for the Pension Fund and to meet all payments by way of medical aid and temporary disability payments awarded by the Board or due to workmen, and also to provide sufficient funds to meet the estimated costs of all accidents which have happened and in respect of which permanent disability awards have not yet been made, or in which temporary disability awards may be continuing. The Board shows on hand as a provisional balance at the end of 1931, \$1,690,273.77 in connection with the Accident Fund from the commencement of the Act, which is deemed sufficient to cover any outstanding and unsettled claims and to provide a reasonable margin of safety.

*Merit-Rating.*—The system of merit rating was outlined in the Board's report for 1927 (LABOUR GAZETTE, June, 1928, page 608). Briefly, it is the system whereby individual distinction between employers even in the same industry is made according to their accident experience. The report states that the amount refunded in connection with merit-rating in 1931 was \$92,333.55 as compared with \$123,661.83 in 1930.

*Accident Prevention.*—The report states that "further increase has been made in

connection with grants to safety associations, the total during the year being \$164,499.03, as compared with \$146,929.22 in the year 1930. Part of this increase is due to the first budget being received from the Class 5 Accident Prevention Association in the mining class, which has started safety work in connection with mining operations. There was also an increase of \$9,399.81 in connection with the Industrial Accident Prevention Associations, which was partly due to statistical work in connection with the individual accident experience of the different employers in the classes and the endeavour of the associations through the cost ratio cards of the individual employers to bring home to those who have a bad accident experience the necessity for more intensive safety work in their individual plants." The amounts paid to each of the safety associations are as follows: Lumbermen's Safety Association, \$26,900; Ontario Pulp and Paper Makers' Safety Association, \$12,100; Class 5 Accident Prevention Association, \$6,500; Industrial Accident Prevention Associations, \$110,399.03; and Electrical Employers' Association of Ontario, \$8,600.

The Board has, in furtherance of the provisions of The Mining Act and the First Aid provisions of The Workmen's Compensation Act, provided a third mine rescue station at Kirkland Lake, which completes for the present the erection of such stations, those now in operation being at Sudbury, Timmins, and the present one at Kirkland Lake, which has just been completed at a cost of \$9,925. There was spent during the past year in connection with these rescue stations, for the erection and maintenance, the sum of \$22,087.03.

*Rehabilitation.*—The Board reports that it has continued its rehabilitation work, spending the sum of \$3,965.57, slightly less than the preceding year, but this is accounted for by the decrease in the number of disabled workmen.

The Board has under consideration the establishment of a physiotherapy department for the purpose of decreasing the time during which the workman is disabled and lessening the severity of the permanent disability of the workman by furnishing him with suitable physiotherapy treatment early in the course of his disablement while such treatment will be more effective.

The accompanying table indicates the total income and expenditure for the various industrial classes in Schedule 1 for 1931.

Class of Industry	Total Income (actual and estimated)	Total Expenditure (actual and estimated)
	\$ cts.	\$ cts.
Lumbering.....	386,535 96	402,693 70
Pulp and paper mills.....	165,836 93	125,152 74
Furniture manufacturing, etc....	66,213 06	59,753 66
Planing mills, etc.....	135,873 50	106,766 21
Mining and explosives.....	650,907 44	683,619 02
Brick manufacturing, quarry- ing and glass works.....	206,912 23	233,470 24
Rolling mills, etc.....	61,906 84	60,900 94
Foundries, etc.....	117,104 09	148,089 38
Fabrication structural steel, etc.	221,317 74	154,563 63
Metal articles, jewellery, manu- facturing, etc.....	227,874 20	226,518 99
Agricultural implements, etc....	192,723 41	193,721 48
Gas, petroleum, paint, drugs, soap, etc.....	168,589 12	165,613 40
Milling.....	106,740 71	120,564 72
Abattoirs, etc.....	47,285 79	46,776 37
Bakeries, canning, liquors and tobacco.....	226,026 42	236,683 52
Tanneries, leather and rubber goods.....	102,978 84	103,394 14
Textiles.....	87,639 50	89,621 50
Clothing, power laundries, etc..	90,222 42	13,162 96
Printing and stationery.....	65,255 46	67,402 16
Teaming, cartage, coal and wood yards, etc.....	207,889 41	206,290 20
Road construction, etc.....	384,446 34	392,560 88
Electric power, etc.....	108,988 48	119,635 01
Steel construction, railway and canal construction, dredging, fishing, etc.....	245,761 32	274,290 33
Building.....	972,924 08	1,020,397 85
Total.....	5,247,953 29	5,402,643 03

The Board's statistics indicate a provisional balance of \$1,690,273.77 in connection with the Accident Fund from the commencement of the Act, this being considered a sufficient amount to provide a reasonable margin of safety.

**Legislation.**—Dealing with legislation the report makes reference to the fact that there were two amendments to the Act during the session of 1931—Chapter 37, by which the provisions relating to miners' phthisis was struck out of the Act in view of the fact that this is covered by the provisions with reference to silicosis; and Chapter 38 called The Blind Workmen's Compensation Act, passed for the purpose of inducing or removing the objections to the employment of blind workmen in industry under proper restrictions (LABOUR GAZETTE, May, 1931, page 531). Reference was also made to the amendment to the Government Employees Compensation Act whereby its provisions were extended to include all Federal government employees, exclusive of military, naval and air services (LABOUR GAZETTE, May, 1931, page 505.)

### Completed Statistics for 1930

In a special chapter of the report are detailed the operations for 1930 containing information which was not available when the

report for that year was made. The final figures for the fifteen-year period from 1915 to 1930 inclusive indicate a total of 723,139 accidents. Of this number, 5,548 were fatal; 39,053 were cases of permanent disability; 394,039 were cases of temporary disability and 284,499 entailed medical aid only.

The report makes a comparison of accident frequencies by correlating the number of accidents with the total number of full year workers, data for this being available, however, only in schedule 1. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are as follows:—

Year	Temporary Disability	Permanent Disability	Death	Totals
1915.....	3.63	.58	.12	4.32
1916.....	4.99	.79	.10	5.88
1917.....	5.78	.72	.07	6.57
1918.....	5.81	.66	.07	6.54
1919.....	5.81	.68	.07	6.56
1920.....	6.23	.67	.07	6.97
1921.....	6.25	.60	.06	6.90
1922.....	5.82	.52	.06	6.40
1923.....	6.02	.51	.05	6.58
1924.....	6.08	.54	.06	6.68
1925.....	5.94	.51	.05	6.50
1926.....	5.84	.54	.05	6.43
1927.....	5.94	.53	.05	6.52
1928.....	5.85	.58	.07	6.50
1929.....	5.80	.61	.06	6.47
1930.....	5.08	.66	.07	5.81

The total cost of all accidents in Schedule 1 for 1930 was \$5,925,502.17, of which \$4,678,678.58 was for compensation (including payments for rehabilitation), and \$1,246,823.59 was for medical aid.

Of the \$4,678,678.58 compensation cost, \$1,188,012.29 was for temporary disability cases, \$2,512,537.25 was for permanent disability cases, and \$978,129.04 was for death cases.

The average cost of temporary disability cases was \$33.38, of which \$55.09 was for compensation and \$28.29 was for medical aid, the average in 1929 being \$96.51, and in 1928, \$97.18.

The average cost of permanent disability cases was \$1,064.88, of which \$265.49 was for temporary disability, \$637 was for permanent disability, and \$162.39 for medical aid.

The average cost of death cases, where there were dependents, was \$4,375.88, and the average cost of all death cases was \$3,407.37, of which \$16.64 was for temporary disability, \$116.52 for burial expenses, \$69.05 for medical aid, and \$3,205.16 for death benefits.

The average cost of all cases in which compensation was paid was \$233.80, of which

\$189.88 was for compensation and \$43.92 for medical aid, as compared with \$210.63 for 1929, and \$203.46 for 1928.

The average cost of medical aid in medical aid only cases was \$5.67, as compared with \$5.70 in 1929, and \$5.54 in 1928.

In nearly 45 per cent of the cases the disability terminated in from one to two weeks. In 7 cases the disability lasted more than a year.

During 1930 there were 8,752 cuts, lacerations, and punctures; 6,657 bruises, contusions, and abrasions; 3,364 fractures; 2,259 sprains, strains, twistings, and wrenchings; 1,918 crushes; 1,079 scalds and burns; 920 injuries to eyes; 197 dislocations; and 211 herniæ, among the temporary disabilities.

Among the 3,147 permanent disabilities were 22 permanent total disability cases and 366 cases exceeded 10 per cent of working capacity.

There were 76 industrial disease cases, of which 2 involved medical aid only, 27 were temporary disability cases, 40 were permanent disability cases, and 7 were death cases. Included in these totals are 29 cases of lead poisoning, 41 cases of silicosis, 4 cases of caisson disease, and 2 cases of benzol poisoning.

Machinery was responsible for 11,724 out of a total of 58,343, or 20.10 per cent of all cases, as compared with 19.56 per cent in 1929, and 20.70 per cent in 1928.

The average weekly wage of workmen receiving compensation in 1930 was \$23.23 as compared with \$23.85 for 1929 and \$23.65 for 1928; while the average age of such workmen was 34.74.

The total time loss in temporary disability cases was 566,750 days or an average of 22.13 days, as compared with an average of 21.07 days in 1929 and 21.01 in 1928.

## Manitoba

The annual report of the Manitoba Workmen's Compensation Board for 1931, indicates another substantial reduction in accidents during the period covered. In that period the Board received reports of 8,274 accidents, as compared with 10,329 during 1930, thus showing a reduction of 19.9 per cent. Fatal accidents decreased 17.3 per cent, there being 41 fatalities reported during 1931 as compared with 52 during 1930. The decrease in accidents was most marked in the steam railways group, which reported 30.4 fewer accidents during 1931 than in 1930. In Group "G" (general body of employers) the reduction in accidents was 20.6 per cent less than in the previous year.

A comparison of the accidents in the various groups during the years 1930 and 1931 is indicated in the accompanying table:

INDUSTRIAL ACCIDENTS IN MANITOBA, 1930-31

Group	1930	1931
Steam Railways.....	1,600	1,114
Province of Manitoba.....	246	340
City of Winnipeg.....	414	369
General body of Employers.....	7,380	5,853
Winnipeg Electric Company.....	129	126
Dominion Government.....	560	467
	10,329	8,274

At the close of 1931, the Board had on its books 574 dependants of workmen killed in industry during the period March 1, 1917, to December 31, 1931, making a net addition of 15 dependants during 1931.

"During 1931," it is stated, "employers to the number of 79 had their operations brought under Part One of the Act by application approved by the Board. As of December 31, 1931, there were 489 employers whose operations had been brought under the Act in this manner. Twenty employers made application to the Board during 1931, and were permitted self-coverage for themselves and their dependants. At December 31, 1931, there were 101 employers carrying this protection."

During 1931, the actual cash disbursed by the Board amounted to \$980,959.89 as compared with \$1,024,982.90 disbursed during 1930, a decrease of \$44,023.01. The number of cheques issued by the Board during the year totalled 32,779 as compared with 35,585 issued during 1930, a decrease of 2,806.

The value of the Board Orders passed during 1931, for the payment of compensation, including orders respecting Dominion Government employees, and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases was \$1,020,534.80, as compared with \$1,236,824.04 for the year 1930, a decrease of \$216,289.24.

*Final Statistics for 1930.*—These figures indicate that 10,263 accidents were reported to the Board as having occurred during that year. Of this total 80.9 per cent involved payment of compensation either for medical aid only or for compensation for time loss and medical aid, while in 19.1 per cent of cases no expense was entailed.

The revised statistics also showed that the total actual payroll for all classes during 1930 was \$72,671,922.40, while the average weekly wage of injured workmen in all classes was \$25.51, the average age of such workmen being 32.93 years.

Of the 4,822 cases in which compensation was awarded in 1930, the largest group was that of accidents caused by handling objects, under which classification there were 1,379 workmen injured. Falls of persons accounted for 656 accidents, stepping on or against objects resulted in 528 accidents, while falling objects caused 443 accidents. The totals under the remaining classification of

accident causation in 1930 were: working machines, 382; tools, 325; moving trains, vehicles, etc., 322; dangerous substances, 240; prime movers (shafting, belting, chains, gears, etc.), 121; hoisting apparatus, 69; runaways and animals, 69; all other causes, 288.

Other information presented in tabular form respecting 1930 accidents relate to number of accidents by classes, nature of disability, time loss, month of occurrence, week of termination of temporary disability, nature of injuries (temporary disability cases), permanent disability cases, death cases, sex, marital conditions of claimants, nativity of claimants, etc.

### Workmen's Compensation in Alberta

Following an amendment to the Workmen's Compensation Act (Accident Fund) by the Alberta Legislature, at its session in 1932, providing for the inclusion of restaurants and retail stores among the occupations covered by the Act, the Board issued Regulation No. 19 during May, defining these terms as employed for the purpose of administration.

#### REGULATION No. 19

(a) "Restaurant" is an establishment operating in a city or incorporated town, where meals are available for the purchase by the general public, and is of such size as to necessitate the constant employment of one or more workmen therein (apart from the employer and members of his family, and temporary part-time employees, all of whom are specifically excluded).

(b) "Retail store" shall mean an establishment, trade, or business, operating in a

city or incorporated town, wherein merchandise or commodities are offered for sale to the public, and is of such size as to necessitate the constant employment of one or more workmen therein (apart from the employer and members of his family, and temporary part-time employees, all of whom are specifically excluded). Without limiting the list of the types of business excluded or in any way limiting such exclusions, the following types of business shall not be deemed to be within the scope of the foregoing definition, i.e.: Barber Shops; Beauty and Shoe-shine Parlours; Surgical; Medical; Veterinary or Dental Work; Auctioneers; Undertakers; Architects; Photographers; Service Stations (without garage in connection); Commission Agents and Salesmen; Pedlars (with or without vehicle); and in addition, all those whose trading or business is of an itinerant nature.

Earlier regulations were given in the last issue of the LABOUR GAZETTE (page 540), and in previous issues.

### NOTES ON INDUSTRIAL SAFETY AND HEALTH

#### Accident Record Competition of Ontario Pulp and Paper Industry

At the annual general meeting of the Ontario Pulp and Paper Makers' Safety Association, held recently at Toronto, Mr. A. P. Costigane, secretary of the Association, announced that the Accident Record Competition for 1931 had been decided as follows:

**Class A**—Winners, Spruce Falls Power and Paper Company, Ltd. Kapuskasing, Ont., with a record of 14 non-fatal accidents, involving 262 days lost time, equal to .133 days lost time per 1,000 hours exposure to hazard;

Runners-up, Abitibi Power and Paper Company, Ltd., Smooth Rock Falls, Ont., with a record of 11 non-fatal accidents involving 127.5 days lost time, equal to .135 days lost time per 1,000 hours exposure to hazard;

**Class B**—Winners, E. Pullan, Ltd., Toronto, with a perfect record of no lost time accidents;

Runners-up, Abitibi Power and Paper Company, Ltd., Espanola, Ont., with a perfect record of no lost time accidents.

The winners of the first aid contest were reported as Alliance Paper Mills, Ltd., Merriton, Ont., with a score of 93 points, and the runners-up as Howard Smith Paper Mills, Ltd., Cornwall, Ont., with the score of 95 points. The winning team received the cup trophy, together with individual medals, and the running-up team individual medals.

It was reported that no mill group meetings had been held in the year, owing to conditions existing in the industry. All operating mills in Ontario had been visited, at one time or another, during the year, and the report stated that, with few exceptions, the physical hazards

are well taken care of, and that suggestions for improvement have been quickly adopted.

Mr. W. C. Millar's report on woods operations stated that these had been on only about a fourth of a normal year's scale during 1931.

In order to ascertain which companies were responsible for the assessment increases, which had mounted during the four previous years, Mr. Costigane and Mr. Millar were supplied with comprehensive cost analyses by Mr. Norman Dean. These have given the desired results in showing high-accident-cost firms, and, in addition, have laid the foundation for a system whereby the causes responsible for high accident costs will be eliminated.

### Coal Mine Fatalities in United States during February

Accidents at coal mines in the United States in February, 1932, resulted in the death of 129 men, according to information received from state mine inspectors by the U.S. Bureau of Mines. This was 37 more than in the preceding month and 16 more than in February, 1931; the increases were due to a major disaster in February. February production was 32,032,000 tons, an increase of 243,000 tons over January and a decrease of 4,767,000 tons from the record of February, 1931. The death rate per million tons of coal mined in February, 1932, was 4.03 against 2.89 in January, and 3.07 in February, 1931. One major disaster—that is, a disaster in which five or more lives were lost—occurred during February, 1932. This was an explosion in a mine at Boissevain, Virginia, February 27, in which 38 men lost their lives. No major disasters occurred in February a year ago. Thus far in 1932 there have been two major disasters causing the death of 44 men, while in the corresponding period of 1931 there were three major disasters and 41 deaths. Based exclusively on these disasters, the death rates per million tons were 0.689 and 0.503 respectively.

### Standard Code of Industrial Hygiene

Having already issued the results of studies of special and specific dangers to industrial workers the International Labour Office (Geneva) has now published under the above title (Studies and Reports No. 14, Series F—Industrial Hygiene) a short text book dealing with the more general problems of industrial hygiene. The code is designed to set forth the principles on which any system of general regulation should be based, and to submit rules which might prove suggestive to industrial states, and serve as a guide for those concerned with maintaining healthful conditions of work.

The Code is divided into four main heads, as follows:—(1) *Working Premises situated at ground level or above ground.* Standard rules are given relating to licensing, height and space, roofing and flooring; windows and doors; cleanliness and sanitation; refuse; ventilation; lighting; temperature; drinking water, etc.; (2) *Working Premises situated below the ground level.* Additional rules are given for premises under such conditions; (3) *Work under Shelters, Pent houses, etc.;* (4) *Work involving special Health Risks: Offensive Trades.*—The special risks dealt with are those resulting from steam or fumes; humidification; smoke, asphyxiating fumes or gases; dust; large furnaces; drying-rooms and stoves; noise; vibration and shocks; and toxic substances.

The Code is supplemented by explanatory notes which enlarge upon the suggested rules.

### Safety Codes for Prevention of Dust Explosions in U.S.A.

The United States Department of Labour has published in its Safety Code Series a new bulletin (No. 562) entitled "Safety Codes for the Prevention of Dust Explosions." The codes, which have been approved by the American Standards Association are for the following types of establishment respectively: Starch factories; flour and feed mills; terminal grain elevators; pulverizing systems for sugar and cocoa; spice-grinding plants; wood-flour manufacturing establishments; installation of pulverized-fuel systems, and coal pneumatic cleaning plants. The final code is for the use of inert gas for fire and explosion prevention.

*Other Industrial Codes.*—Among the codes sponsored by the Bureau of Standards are the American logging and sawmill safety code; the safety code for elevators, dumbwaiters and escalators; and the national safety code for the protection of the heads and eyes of industrial workers. The Bureau has also participated in the work of committees preparing and revising a number of other nationally recognized industrial safety codes. Some of these which have been completed are the code for mechanical refrigeration, textile safety code, code for window washing, code for floor openings, railings and toeboards, and factory lighting code. The following codes are among those yet incomplete: code for walkway surfaces, code for conveyors and conveying machinery, and code for cranes, derricks and hoists.

All of these mechanical safety codes have been developed under the procedure of the American Standards Association, which is a federation of technical societies, trade organizations and Federal Government departments.

Under its procedure, standards may be initiated by any responsible group. Representative technical committees are appointed to study and formulate the standards, and in this way when it is found that the predominating opinion of members of the specific committee is favourable, the code developed becomes either a "recommended practice," an "American tentative standard," or an "American standard."

### Compensable Diseases in Great Britain

An interim report has been published by a committee appointed by the British Home Secretary to inquire into proposals to extend the list of industrial diseases under the Workmen's Compensation Act by including (i) poisoning by turpentine; and (ii) papilloma occurring in workers liable to mule spinner's cancer. The question of amending the description of the disease at present described as "dope poisoning (that is, poisoning by any substance used as, or in conjunction with, a

solvent for acetate of cellulose) or its sequelae" was also referred to the Committee during the course of their sittings.

In regard to turpentine poisoning the committee found that no case had been made out. With the reference to papilloma, they suggest the addition to the schedule—so far as regards workmen employed as minders or piecers in connection with cotton spinning by self-acting mules, and subject to various safeguards—of a condition to be defined as "a localized new growth of the skin, papillomatous or keratotic, due to mineral oil."

On the question of dope poisoning, they report they have come to the conclusion that it would not be right, on the evidence at present available, to add to the schedule poisoning by any particular substance used as, or in conjunction with, a solvent for nitro-cellulose, or poisoning by such solvents generally. They also consider that the item "dope poisoning" in the schedule has ceased to serve any useful purpose, and is in fact a source of confusion.

## LABOUR AND INDUSTRY IN ONTARIO IN 1930-31

### 12th Annual Report of Provincial Department of Labour

THE twelfth annual report of the Ontario Department of Labour reviews industrial conditions in the province during the fiscal year ending October 31, 1931. Included in the duties of the Department is the administration of the following Acts:—The Sanitary and Hoisting Engineers Act; The Factory, Shop and Office Building Act; The Employment Agencies Act; The Steam Boiler Act and the Apprenticeship Act. The report also deals with the activities of the Ontario Government Offices of the Employment Service of Canada.

Dealing with employment conditions during the year, the report notes the greatly reduced volume of industrial employment as compared with the previous year. It states that in no month was the level of the corresponding month of 1930 reached: Reports of employers to the Dominion Bureau of Statistics indicated that the volume of employment for the year (with 1926 as the base year, as 100) is represented by the index number of 103.1 as compared with 117.1 for 1930. Practically all divisions of the manufacturing industries contributed to this general shrinkage, the most pronounced reductions being in the iron and steel group. Also, drastic curtailment of operations was reported in logging camps. The remaining industrial groups—communication,

trade, transportation, mining and services—all reported decreases in employment.

*Employment Service.*—A cross section of industrial conditions during the year is shown in the work of the provincial employment offices of the Employment Service of Canada. The year 1931 was regarded as the most difficult in the history of the Employment Service. The number of applicants—414,735—registered at the various offices was higher than ever before and the total placements in industry—261,243—reached the lowest point since 1921. Placements in casual employment, however, were very much in excess of any other year since the Service was organized in 1917. This is explained by the fact that many of the municipalities assigned to the local office of the Employment Service complete responsibility for the selection and placement of men on municipal unemployment relief projects. Of the total of 261,243 placements, 188,819 or approximately 72 per cent, were in casual employment and 72,424 in regular employment. The total number of vacancies during the year was 270,961.

In addition to its regular function, the Employment Service was assigned the task of recruiting and transferring men for highway construction and other relief work. Respect-

ing this phase, the report of the general superintendent of the provincial offices observes: "Men engaged in highway construction work receive thirty cents an hour for an eight-hour day and are charged five dollars and sixty cents per week for their board and accommodation. If five times as many jobs had been available, it would have been a simple matter to fill the camps as the vast numbers of unemployed workers of the province are earnestly seeking work even though it involves leaving their homes and enduring the hardships of the winter in Northern Ontario."

A new problem arising out of the unusual conditions is dealt with as follows in the superintendent's report as follows:—

"One of the most important problems facing the Employment Service during the year has been the maintenance of the proper relationship between public employment work and social service. The superintendents and the staffs of the various offices are brought so intimately in contact with men and women requiring monetary or other assistance and with charitably disposed persons, that it becomes quite a problem to maintain the proper perspective as to our function.

Experience has demonstrated the fact that if a public employment office becomes known as a relief agency, or as being associated too closely with direct relief in any form, it loses a measure of its usefulness to the community. The placement of men on relief projects is, however, an entirely different matter and comes within the legitimate scope of our activities. Throughout the year superintendents were instructed from time to time to guard against engaging in the dispensation of direct relief but to co-operate to the fullest possible extent in the selection and placement of men on relief work. In order to impress this point on the staff of the service in Ontario, a statement made by an employment official was forwarded to all offices which concludes thus:—

"Let us keep firmly in mind during this difficult period of unemployment that the effectiveness of our employment services depends largely on our ability to select applicants on the basis of fitness and ability rather than of need."

"Another question which comes prominently to the fore in a time when jobs are scarce is the proper attitude towards well-meant offers of farmers who are prepared to engage a man, provided he will work for his board and lodging. The policy followed generally by the offices was that placements under such conditions were not made officially, but farmers making such offers and men willing to accept such terms were brought together and

left to make their own arrangements. Such transactions were not entered as placements in the records of the offices."

*Handicap Section.*—In the Handicap Section (where employment opportunities are looked after on behalf of disabled ex-service men and others crippled by injuries) placements of disabled ex-service men in 10 offices throughout the province totalled 3,631, of which 2,196 were casual and 1,435 regular employment. Applications numbered 6,202. The report notes that in spite of industrial depression placements of handicapped men showed a reduction of less than 300 as compared with 1930.

*Private Employment Agencies.*—Licensed under the Employment Agencies Act are fifteen private employment agencies, three of which are nurses' registries. In 1916 when the public employment service was organized in Ontario, there were 99 private agencies in the province. During the year 1930-31, two agencies discontinued business. The number of placements effected by the continuing 15 agencies totalled 18,400 of whom 3,033 were women.

*Factory Inspection.*—The forty-fifth annual report of the Factory Inspection Branch forms an important part of the report of the Department. During the year under review there were 21,939 inspections and re-visits conducted by the branch inspectors as compared with 20,227 in the previous year. The number of employees in the industries, mercantile establishments and office buildings inspected totalled 325,328 while in the preceding year there were 319,556 employees in such establishments. There were altogether 5,035 orders issued relating to the various requirements of the Factory, Shop and Office Building Act as compared with 6,996 in the previous year. Reports of 1,296 violations of Acts, in the enforcement of which inspectors have a responsibility, were submitted, the majority of such violations being due to negligence in connection with Orders of the Minimum Wage Board. In addition there were 120 complaints received during the year. Upon investigation 57 were upheld, 42 not upheld, 17 are pending investigation and 4 did not come within the jurisdiction of the branch. Of the total number of complaints the chief causes were: hours of labour, 37; ventilation, dust, fumes, etc., 12; lavatories, 11; heat, 10; boilers, 7; and fire protection, 6.

*Employment.*—The accompanying tables show the number of employees by sex and age in industrial and mercantile establishments and office buildings, together with hours of work, during the fiscal year 1930-31.

NUMBER OF EMPLOYEES IN FACTORIES IN ONTARIO

Employees	1930	1931
Males over 16.....	226,957	228,627
Males 14-16.....	317	113
Females over 18.....	88,401	94,986
Females 14-18.....	3,881	1,602
Total.....	319,556	325,328
Children under 14 dismissed.....	8	1

HOURS OF LABOUR IN FACTORIES IN ONTARIO

Males	Number of Employees
45 hours per week.....	118,182
50 hours per week.....	43,621
54 hours per week.....	23,142
58 hours per week.....	2,977
60 hours per week.....	22,123
Females	
45 hours per week.....	57,428
50 hours per week.....	18,909
54 hours per week.....	6,468
58 hours per week.....	1,345
60 hours per week.....	4,399

In addition to the numbers given in the table, there were 26,794 employees, male and female, working approximately 50 hours per week. Applications for overtime permits totalled 2,031.

In his report, the examiner of plans of factory buildings who is attached to the Ontario Department of Labour states that the estimated value of buildings for which plans have been approved during the year is in excess of \$19,000,000. From his analysis of the trend of building, the examiner concludes that a number of firms have taken advantage of the lull to modernize and completely re-model their plants in readiness to cope with increased business, while others are preparing to manufacture for both domestic and foreign markets.

*Accidents and Safety Measures.*—The report of the chief factory inspector emphasizes the need for continuing educational work in safety organization. He deals with the personal factor in the problem as follows:—

“One might think that an accident would be indelibly impressed on the minds of workers, but it usually happens that unless an immediate repetition of the accident occurs the daily routine of the shop and the changing of personnel result in the memory of this particular accident growing dim. The repetition of an accident under practically parallel circumstances should not be possible, but unless workers are absolutely sold in the idea of safety they will drift into dangerous habits and practices usually explained as pure thoughtlessness.”

The various health hazards in industry—present in the treating of furs, in tetra-ethyl lead, in dust, in spray painting, and in the handling and use of acids and commercial chemicals in industrial processes—are dealt with in detail as well as safety measures to cope with such dangers.

During the year the number of industrial accidents reported totalled 3,256 of which 35 were fatal as compared with 4,817 accidents, including 50 fatalities in the previous year. An analysis of the fatalities indicates that 10 were due to explosions, 7 were caused by falls, while burns and scalds, electricity, and falling substances were responsible for three each.

Inspections were conducted under the regulations approved August 9, 1931, respecting the protection of persons working in tunnels and open caissons, and in this respect the report states the co-operation of contractors and workers has resulted in a decrease in the number of cases of sickness and accident. Reference was also made to the activities of the Industrial Safety Division in testing and demonstrating safety features for use in industrial plants.

*Boiler Inspection.*—In compliance with the Steam Boiler Act, which requires that all steam boilers and other pressure vessels constructed for use in the province must be built from designs which have been approved and allotted a registration number, the report of Boiler Inspection Branch states that during the fiscal year, 401 such designs were surveyed, registered and re-registered, while 61 were returned to the manufacturers for revision.

Of new pressure vessels, 391 first inspections were made, 212 second, and 309 third inspections.

Used pressure vessels were given 1,359 first and 252 final inspections. Included among these used pressure vessels were 693 boilers and 52 pressure vessels which were inspected upon special request for this service although they did not come within the jurisdiction of the Steam Boiler Act. Altogether 2,722 certificates were issued by the Boiler Inspection Branch. Seven investigations were made of explosions of boilers and pressure vessels during the year. The total amount of moneys transmitted to the treasury was \$16,012.20 as compared with \$20,136.84 in 1930.

*Stationary and Hoisting Engineers.*—The report of the Board of Examiners of Stationary and Hoisting Engineers indicates increased activity due to the fact that employers are employing engineers of higher grade than is required by law, while the demand for efficiency in the operation of power plants has resulted in an increase in the number of candidates for examination. It is also noted that

when trade is dull engineers try to obtain certificates of higher grade in order to promote security of employment.

Altogether 18,200 certificates, or 335 more than last year, were issued during the year, of which 1,626 were issued upon examination or re-examination, 21 were provisional certificates, 22 duplicate, 16,365 were renewals, and 166 were plant registration certificates.

The number of candidates examined during the year totalled 2,198 as compared with 2,134 in 1930. Of this number 895 sat for examination in the Toronto office of the board, and 1,303 at the outside examination centres, at which 97 examination sessions were held. Divided according to grades, there were 1,140 for fourth-class certificates, 529 for third-class, 169 for second, 59 for first, 133 for hoisting, and 168 for portable engineers' certificates. The net revenue for the year amounted to \$25,890.97, an increase of \$142.63 as compared with 1930.

*Apprenticeship Branch.*—Activities under the Apprenticeship Branch are summarized by Mr. A. W. Crawford, formerly inspector of apprenticeship and now Deputy Minister of Labour of Ontario, in the following paragraphs:—

"Operations under the Apprenticeship Act have progressed favourably during the year and the system is becoming fairly well established in the nine designated trades, especially in the larger centres of the province. Considerable opposition to the Act and regulations has been evidenced among certain groups of employers who claim that they are not sufficiently consulted when regulations are being drafted by the Apprenticeship Committee and that the Committee is not representative of the designated trades. In order to remove cause for such criticism, the replacing of the Committee by a small Board is being contemplated at present. This Board will consult with representatives of each trade before any changes are made in the Act or regulations in order that it may be able to carry out the wishes of the employers and employees in each trade to the best advantage of all concerned. (Provision for the establishment of such a Board is contained in the Act as amended at this year's session of the Legislature and which was reviewed in the last issue of the LABOUR GAZETTE on page 529.)

"The collection of assessments has gained considerable publicity for this Act, both

favourable and otherwise. Those employers who have taken an active interest in the development of the apprenticeship system consider the assessment scheme as an equitable one and essential to the proper training of apprentices. Others, situated chiefly in centres where no organized effort had formerly been made to train apprentices, consider the assessment scheme an unwarranted burden on the employers. During the year, 3,238 assessments were issued to the amount of \$42,643 and of this number 3,034 assessments were paid, amounting to \$41,262. The fact that 96 per cent of the amount levied was paid before the end of the fiscal year would indicate the support afforded this scheme by the majority of the employers in the designated trades. The rate of assessment so far has been one-eighth of one per cent of the payroll for the previous year. Out of the assessment fund is paid a living allowance of \$10 per week for each apprentice while in attendance at day classes, as well as return transportation for boys from outside centres.

"The day classes for first and second year apprentices from all parts of the province were conducted in the vocational schools at Toronto, Hamilton, Ottawa, and Windsor. These classes were operated eight hours per day for five days per week during the first eight weeks of the calendar year with a total enrolment of 314.

"The active contracts registered with the branch at the end of the fiscal year numbered 1,030 as compared with 1,168 the previous year. The number of completions during the year was 230, an increase of 101 over the previous year, and the cancellations totalled 50 as compared with 71 for 1930. 142 new contracts were registered during the year, as compared with 340 the year before.

"The greatest problem in connection with the administration of the Apprenticeship Act has been due to abnormal conditions in industry which make it impossible for any system, designed to meet the requirements of normal conditions, to function satisfactorily. Progress, however, has been made and the outlook for the future is encouraging."

*Industrial Disputes.*—The strikes and lock-outs during the year are presented in tabular statistics. There were 18 industrial disputes reported as compared with 21 in 1930. A total of 2,827 were involved in these disputes with a time loss of 66,268 days.

## CANADIAN MANUFACTURERS' ASSOCIATION

### Sixty-first Annual Convention, Ottawa, June, 1932

THE 61st annual convention of the Canadian Manufacturers' Association was held at Ottawa, commencing June 6, representatives of industries in all provinces in Canada attending.

#### The President's Address

Mr. William H. Miner, in his opening address as president, dealt particularly with existing conditions in Canada and throughout the world. A number of causes of the depression might be named, he said, "but it seems apparent that they are fusing into one, a partial paralysis of the financial machinery of the world. No other explanation seems adequate.

"The suggestion that the cause is scarcity of products," he continued, "is not tenable for a moment; there never was such a surplus of products of all kinds. Neither can it be said that it is due to high prices; most prices are at their low points of the present century. Nor can it be laid to inefficiency, because there never was a time when the factories, the farms, the mines, and all other producing agencies were as well equipped and as capable of turning out products as they are to-day. It cannot be held that there is a lack of consumers, as the population of the world is greater and living standards are higher than ever before. We are driven back, therefore, to the view that the world has temporarily lost the art of working the delicate and nicely-balanced mechanism of the international financial and credit system, upon the orderly operation of which the economic well being of the world largely depends."

The president referred next to the subject of reparations and international debts, maintaining that whatever revision should be finally decided upon, "it should be adequate, permanent, and negotiated on the understanding that the contracting nations will honour their promises to pay. When this is settled, we venture to say that money will circulate more freely, currencies will become relatively stable, unreasonable economic handicaps will be modified, and international trade will resume a more normal flow."

In reference to the British Empire Economic Conference, which is to open at Ottawa on July 21, Mr. Miner cited a resolution that was adopted by the Association in 1930, as follows: "In all negotiations concerning British Empire Trade, the interest of Canadian producers, whether industrial or agricultural, should be properly safeguarded, and, when

this is assured, every practical plan to increase trade among British countries should be supported, especially in view of the fact that many foreign countries have been restricting their purchases of Canadian products, by means of increased tariffs and import regulations. That there are great possibilities for extension of Empire Trade is beyond doubt. The Empire includes a fifth of the world's population and a quarter of the world's area; the wants of so great a multitude, constantly growing as the standards of living rise, offer opportunities to Canadian producers to increase their sales. The Empire is a great storehouse of natural wealth, much of it being only partly developed."

"Tariffs are important," the president continued, "and will be thoroughly considered at the conference, but we should remember that Empire trade can be assisted also by improving transportation facilities, by the efforts of Government departments, consuls, trade commissioners, and other similar officials, through trade exhibitions, marketing plans and advertising campaigns, by improving cable, telegraph, telephone and wireless communications, by expert study of fields of production and distribution, by exchange of information in regard to the origin, nature, and uses of products, and in many other ways. The Conference should be a landmark in the history of the evolution of the Empire as all parties are approaching it in a constructive and friendly attitude, and with the desire and determination to extend and improve Empire trade without giving undue advantage to, or inflicting hardship on, any part of the Empire."

Referring to the increase in public expenditures in recent years President Miner remarked that "governments are only partly responsible for this situation, because even the most optimistic and generous governments have only given their peoples part of what they asked. In Canada, we have gone very far in this respect by demanding all sorts of social and welfare legislation, commissions, public services, railroads, buildings, highways, and many other things. As a result immense sums in the form of taxes are withdrawn from ordinary commercial uses such as the payment of wages and the purchase of commodities. When we received our tax bills we have blamed the Dominion, Provincial and Municipal Governments which issued them, whereas we should have accepted a large share of the blame ourselves.

"The problems of employment," the speaker continued, "are testing our methods and capacities. A civilized country such as this does not wish to have, and in fact will not countenance, conditions which deny large numbers of its citizens even the elemental necessities. The united efforts of religious and charitable organizations, governments, taxpayers, and individuals during three successive bad years have at least held society together, and food, shelter, clothes and fuel, together with some recreation, have been provided generally for all those temporarily in need. These co-operative humanitarian efforts, of course, will not be approved or assisted by those who think that everything is wrong and that all effort is futile, unless in conformation with their particular political, social or economic systems, which they can produce full grown at a moment's notice; but the fact remains that the results attained in providing employment and relieving distress during the past three years make a much better showing than those achieved by most other countries, under widely varying forms and policies of government. . . . It is certain that, had it not been for the measures provided by the Dominion Government, in the form of increased customs tariffs and proper and accurate customs appraisals, and the strict enforcement of dumping regulations, the number of unemployed in Canada would have been much greater during the past two winters than it was. Goods from the United States, Europe, and Asia, would have been poured into this market in a great flood, without consideration of production costs. Surely the past three years have exploded the fallacy that low prices mean prosperity, and that reckless selling below cost will restore prosperity. When have prices been so low, when have bargain and bankrupt sales been so numerous, and when has unemployment been so great?"

"Until world affairs improve, we must continue to deal with conditions of trade and employment as we meet them from day to day and plan in advance as far as possible; but at the first opportunity, Canada needs a healthy swing away from governmental paternalism towards the old-fashioned virtues of self-reliance and the encouragement of the individual to find a way out of his own difficulties, to pay his own way and to maintain himself. Support is needed for all measures which will increase the opportunities for employment. Nearly all our material troubles in Canada would be solved in a few months if the products of agriculture, industry, the mines, the fisheries and forests could be sold in good volume, at prices which would yield

fair returns to labour and invested capital, and if, consequently, work could be provided for those who have none. The free provision of food and lodging, relief grants, and similar expedients would disappear, and thousands of people who are now galled by the unpleasant experience of accepting help would be again independent and much happier than they are at present.

"In the meantime, what can we do? In the first place, Canada should give all the support in her power to any international effort to restore international finance and credit. In the second place, Canada should endeavour to attain the highest possible degree of success for the British Empire Economic Conference, and, in this connection, the Association has given and will continue to give the utmost assistance at its command. In the third place, all Canadians should concentrate their best thought and effort, in the task of improving conditions, providing employment and relieving distress within our own national borders; and inspired by the example of Great Britain and the memory of their own past achievements, retain the steadiness that our people have shown in previous periods of stress, grapple with the problems of each succeeding day to the best of their ability, and anticipate hopefully and courageously the resumption of our national progress and well being."

### Report of Industrial Relations Committee

The report of the Industrial Relations Committee, which was adopted by the convention, dealt firstly with the 15th and 16th sessions of the International Labour Conference (Reports of these sessions have already appeared in the *LABOUR GAZETTE*). The remaining paragraphs in the report of the Committee were as follows:—

*Workmen's Compensation.*—"General investigations into the working of their respective workmen's compensation acts were held in Alberta, Ontario and New Brunswick. The question of outstanding importance in all three cases was the demand of Labour for increased benefits. In Ontario, for example, there was a demand for an increase in the scale of compensation from 66½ to 75 per cent, and an increase in the wage base from \$2,000 to \$2,500. All told, the increases would have involved in Ontario, according to the report of the Royal Commissioner, an immediate capital expenditure of from \$6,000,000 to \$7,000,000 and an increased annual cost of approximately \$1,500,000. The increased cost in Alberta would have been in proportion.

"Your committee arranged for the preparation and presentation of the employers' case in Ontario, and collaborated with the Prairie Division and the Alberta Branch in safeguarding the employers' interests in Alberta.

"The result, your Committee has pleasure in reporting, was that in both provinces the demand for increased benefits was rejected. The Ontario Royal Commissioner included in his report a strong statement to the effect that the cost of social legislation had already reached very large proportions, and a declaration that it was time to call a halt.

"The result in Alberta was equally satisfactory, the committee of inquiry recommending unanimously against any increases in the benefits and also against any change in the present (three day absolute) waiting period, or the present contribution by the workmen of the cost of medical aid, which latter two provisions were vigorously attacked by labour.

"As regards the New Brunswick inquiry, the result appears likely to be not only that there will be no increases in benefits, but that the administration will be put on a more satisfactory basis.

"The Quebec Workmen's Compensation Act has just been declared *ultra vires* by the Quebec Courts on the ground that the Legislature has no right to supersede the ordinary civil judges by appointing a Compensation Commission. This decision will undoubtedly be appealed to a higher court. (A summary of this judgment is given in this issue of the LABOUR GAZETTE).

*Old Age Pensions.*—"It will be recalled that when old age pensions legislation was first introduced in Canada, in 1926, the Association took the view that the sound type of old age pensions legislation was the contributory 'all in' system, rather than the non-contributory deserving-poor system. In spite of representations along these lines, made at that time by the Association, it was the non-contributory deserving poor type of legislation which was passed. The experience of the last six years has, in the opinion of your Committee, confirmed the view which was taken from the outset by the Association, viz., that the wise course is not to single out the deserving poor but to make both poor and non-poor eligible for pension—on one condition, viz., that they contribute. The only new development during the past year has been the assumption by the Dominion of 75 per cent of the cost instead of 50 per cent as formerly. Your Committee has brought the views of the Association to the attention of the Dominion Government.

*Unemployment.*—"Your Committee has endeavoured during the past year to co-operate in every way possible with the Dominion and Provincial Governments and with the municipalities in the carrying out of the program of providing work and, failing work, relief for those out of employment. Among other things, it endeavoured to arrange for industry to be represented on the provincial committees set up to administer the 'Unemployment and Farm Relief Act,' and joined with the Canadian Construction Association in urging that in addition to works which would give employment to unskilled men, part of the money voted should be spent on works which would give employment to skilled and semi-skilled men of whom there have been large numbers unemployed. So far as the membership of the Association at large is concerned, there is abundant evidence that everything possible has been done to keep a maximum of men in at least part time work.

"A proposal made early this year that there should be held a national conference on employment and unemployment was not approved by your Committee. In view of the fact that the Government program had already been determined, and that in the carrying out of that program the active co-operation had already been secured of provincial and municipal authorities from one end of the country to the other, it did not appear that any greater degree of co-operation could be secured or any good purpose served by holding a national conference.

"As regards unemployment insurance, the agitation for its adoption in Canada has somewhat subsided, no doubt because of the unhappy experience in Great Britain and other countries and the obvious impossibility of meeting the cost of such an expensive scheme, in the present state of the national finances. In the meantime the Government, having come to the end of its program of public works economically justifiable, has extended the system of direct relief, which has the advantage of being the least expensive method of meeting the situation."

### Resolution on Unemployment

"Whereas, the great producing departments of Canada, agriculture, mining, fishing, lumbering and manufacturing, are still providing employment for the great majority of Canadians; and whereas this is being accomplished in spite of a prolonged and severe financial and business depression, due to world conditions over which Canada has little influence, and whereas, notwithstanding these efforts, supplemented as they have been and are by the

plans and expenditures of the Dominion, provincial and municipal governments, there are many thousands who, though willing, cannot find work: Therefore, be it resolved that the Canadian Manufacturers' Association reaffirms in the most positive manner its support of all practical and economically justifiable measures to provide employment; asks its members throughout Canada to maintain their co-operation and their efforts of the past two years in their own plants and elsewhere, to the limit of their abilities and resources, by distributing available work among as many employees as possible; favours aided land-settlement for those who wish to farm and are likely to succeed; and supports, for those who cannot get work, direct but carefully controlled and administered direct relief."

#### Resolution on Taxation

"Whereas Dominion, provincial and municipal governments have been steadily increasing their expenditures since the war until their respective debts have reached serious proportions, and whereas the resulting taxes divert to the cost of Government immense sums which, if available for the payment of wages and productive investment, would provide much additional employment, and whereas a considerable percentage of such taxes are for expenditures, which the public has demanded, and whereas the Dominion and most of the provincial and municipal governments, during recent sessions, have been trying to reduce their expenditures, and to balance their budgets: Therefore be it resolved that the Cana-

dian Manufacturers' Association records its appreciation of these efforts; and, at the same time respectfully urges all governments, and their various boards and commissions including municipalities, to restrict still further their expenditures as far as possible, consistent with maintaining necessary efficiency; recommends that the Dominion, provinces and municipalities should come together in order to reach an understanding in regard to fields of taxation, in order to prevent duplication of taxation; and, further, that the Association co-operates by asking its members and their employees as well as the public throughout Canada to refrain from asking for public expenditures except those immediately necessary, and also to advise and assist their provincial and municipal governments to curtail their expenses, and, consequently, to lessen the present excessive burden on those who pay rents and taxes and thus release large sums now absorbed by taxes, for use in agriculture, lumbering, mining, fishing, manufacturing and other forms of production."

#### Officers Elected

Honorary officers for the ensuing year were elected as follows:—

President: Mr. W. C. Coulter, Toronto.

First Vice-President: Mr. George Henderson, Montreal.

Second Vice-President: Mr. L. L. Anthes, Toronto.

Treasurer: Mr. T. F. Monypenny, Toronto.

The chairman of the Industrial Relations Committee is Mr. A. R. Goldie, Galt, Ontario.

### Central Electric Station Industry in Canada

Under the authority of the Statistics Act, 1918, the Dominion Bureau of Statistics takes annually a census of the central electric industry, as part of the Industrial Census of Canada. The report of this census for the year 1930 has recently been published. Central electric stations are defined as companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. The stations are divided into two classes, according to ownership, viz., (a) commercial, those operated by companies or individuals, and (b) municipal, those operated by municipal, provincial or federal governments. The stations are also divided according to operation into (a) generating, those stations generating power

which they sell; many of them also purchase power to supplement their own output, and (b) non-generating, those stations which purchase all the power they sell.

The report showed that the total number of employees in this industry during 1930 was 17,857, of which 7,362 were in Ontario; 4,444 in Quebec; 1,765 in British Columbia; 1,529 in Manitoba; 775 in Alberta; 760 in Nova Scotia; 754 in Saskatchewan; 420 in New Brunswick, and 48 in Prince Edward Island. It was one of the few industries to indicate an increase in employment during 1930, the number employed being 1,693, more than in 1929. Salaries and wages in 1930 amounted to \$27,287,443, which was an increase of \$2,455,622 over the 1929 payroll.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### League of Nations Council Considers Unemployment Situation

The Council of the League of Nations gave consideration on May 21 to a resolution on the subject of unemployment which had been adopted by the International Labour Conference during the preceding month, in which it was pointed out that at least twenty-five million workers are now unemployed and the necessity was stressed of endeavouring to restore general prosperity by appropriate decisions. The resolution of the International Labour Conference went on to suggest: (1) The planning, financing and putting into execution without delay of big international and national public works; (2) The participation of the League of Nations and the International Labour Organization in the Lausanne Conference on debts and reparations; (3) Joint action by States to settle the general problems of currency and credit and lay the foundations for a stable international monetary system; and (4) The calling of a world economic conference of governments, with the collaboration of representatives of employers and workers, for the conclusion of "such international conventions as will ensure the resumption of economic activity on the basis of broad concerted plans."

In the course of the discussion on this subject before the League of Nations Council, Mr. H. B. Butler, Deputy Director of the International Labour Office, laid stress on the authoritative character of the resolution. The Spanish Government representative described it as "both a symptom and a warning," while Mr. Paul Boncour, the representative of France, commended it as an authentic expression of the will of the world of industry.

At the close of the discussion, the following resolution was adopted:—

The Council, having considered the resolution adopted by the International Labour Conference at its sixteenth session with reference to the economic and financial crisis:

1. Refers the resolutions of that Conference to the Assembly;
2. Requests the Committee of Enquiry on Public Works and National Technical Equipment to accelerate its proceedings;
3. Declares that the various League organizations will be at the disposal of the Lausanne Conference, should the latter express a desire for their assistance; and
4. Decides to lay before the Assembly the question of the summoning of a World Conference to consider the problems of production and international trade with a view to the conclusion of international conventions designed to bring about a resumption of economic activity, and to request the Secretariat to make the necessary preliminary investigations.

By this decision of the Council, the practical and far-reaching action for which the International Labour Conference called has been brought a step nearer, and in the meantime the effort to apply immediate, if only palliative, measures in the form of public works is to be expedited.

### Canadian Representatives on Commissions of Enquiry

Under Article 412 of the Treaty of Versailles and the corresponding article of the other treaties of peace, provision was made for setting up a panel, composed of three persons from each of the Member States of the International Labour Organization, from which Commissions of Enquiry might be drawn to deal with any complaints that might arise as to the ineffective observance of International Labour Conventions by individual countries which had ratified the same. This international panel was originally constituted in 1920, but in the interval since the majority of the appointments were made a number of vacancies have occurred through death and it was deemed advisable by the Governing Body of the International Labour Office to make any changes which might be desirable in the personnel of the panel so as to accord with the wishes of the Member States.

It is required by Article 412 of the Treaty of Versailles that the three persons nominated by each of the Member States of the International Labour Organization for appointment to this panel shall be persons "of industrial experience, of whom one shall be representative of employers, one representative of workers, and one a person of independent standing." An Order in Council has been adopted, designating the following persons for appointment to the above-mentioned panel on behalf of Canada:—

Representative of employers—Mr. W. C. Coulter, President of the Canadian Manufacturers' Association, Toronto, Ontario;

Representative of workers—Mr. James Simpson, Vice-President of the Trades and Labour Congress of Canada, Toronto, Ontario;

Person of independent standing—The Right Honourable Mr. Justice Duff, of the Supreme Court of Canada, Ottawa, Ont.

These appointments have since been approved by the Governing Body of the International Labour Office.

### I.L.O. Year Book

The International Labour Office has now nearly ready its yearly international survey of social policy and progress. This publication, which appeared for the first time last year under the title of the *Annual Review*, is an offshoot of the Report presented annually to the International Labour Conference by the Director of the Office. For its second year of issue, this work appears under a new and more distinctive title—the *I.L.O. Year-Book*. It is designed to provide for Governments, employers, workers, educationalists, and all others interested in industrial and labour questions, a compendium of the principal events and developments during 1931 in the realm of economic and social affairs. It presents, in a condensed and ordered fashion, all the main facts relating to the activity of the International Labour Organization and to the wide range of problems with which the Organization is concerned, summarizing the national and international legislation of the year and bringing out the trend of social policy, problem by problem and country by country.

### Funeral of Albert Thomas

Reference was made in the last issue (pages 477-8) to the death of Albert Thomas, Director of the International Labour Office, Geneva, which occurred suddenly in Paris on May 8. The funeral took place in his native village of Champigny-sur-Marne, France, on May 11 in the presence of many thousands of people. Forty governments were officially represented. Large delegations from the Council and the Secretariat of the League of Nations were there together with members of the Governing Body and of officials of the International Labour Office. Many eminent representatives of political, scientific and industrial circles were also present with numerous trade unionists, socialists, co-operators, and the whole population of the village of Champigny. Speeches were delivered by Mr. Ernest Mahaim on behalf of the Governing Body of the International Labour Office; Mr. Pierre Laval, on behalf of the French Government; Mr. Oersted, on behalf of the Employers' group of the Governing Body and of the International Organization of Industrial Employers; Mr. Léon Jouhaux (France) on behalf of the Workers' group of the Governing Body, the International Federation of Trade Unions and of the French General Confederation of Labour; Mr. H. B. Butler, Deputy Director of the International Labour Office, on behalf of the staff; Mr. Tait, on behalf of the Staff Union of the International Labour Office; Mr. Matos, on behalf of the Council of the League of Nations; Mr. Renaudel, on behalf of the

Labour and Socialist International and its French section; Mr. Victor Schiff, on behalf of the German Social Democratic Party; Mr. Poisson, on behalf of the International Co-operative Societies; and Mr. Courci, the Mayor, on behalf of the town of Champigny.

A memorial ceremony was held simultaneously at the International Labour Office in Geneva and at Christ Church, Westminster, London. The memorial service in London was attended by the Rt. Hon. Sir Henry Betterton, British Minister of Labour (who read the lesson), the French Ambassador, Lord and Lady Parmoor, Sir Francis Floud (representing the Prime Minister) and a large representative gathering.

The International Labour Office will issue shortly a special publication containing an account of the life of Albert Thomas and the tributes paid to his memory.

### Publications of the Office

#### *"Studies on Industrial Relations: II"*

Under the above title the International Labour Office has published the second volume of a series of monographs dealing with industrial relations in particular undertakings, the primary object of which is to ascertain the actual development of the relations between employers and workers, both in the works and in collective negotiation between representative organizations.

The undertakings described in this volume are the Zeiss Works (Jena, Germany), engaged in the manufacture of precision mechanism, the F.I.A.T. Establishments (Turin, Italy), manufacturing motor cars, the Philips Works (Eindhoven, Netherlands), manufacturing electric bulbs and wireless appliances, and the Sandvik Steel Works (Sandviken, Sweden). These undertakings are generally recognized as successful representatives of their industries and countries, and some are of world-wide importance.

Coal production in Canada during the first quarter of 1932 increased 9 per cent to a total of 3,463,843 tons, as compared with 3,191,956 tons produced in the corresponding period of 1931, but declined 16.2 per cent from the five-year average for the quarter of 4,132,091 tons. Bituminous coal output amounted to 2,116,662 tons, sub-bituminous coal 154,589 tons and lignite coal, 1,192,592 tons. Compared with the first three months of 1931, Saskatchewan's output of 307,112 tons showed an increase of 55.5 per cent, Alberta's production advanced 26.4 per cent to 1,516,692 tons, British Columbia's output rose 4.1 per cent to 485,220 tons and New Brunswick's production of 58,955 tons was 1.0 per cent higher; on the other hand, Nova Scotia's total declined 13.6 per cent.

## UNEMPLOYMENT AND FARM RELIEF ACT, 1931

THE accompanying table gives particulars of the work carried on up to April 30, 1932, under the provisions of the Unemployment and Farm Relief Act, 1931. (The report of the Dominion Director of Unemployment Relief, dated March 1, 1932, which was presented

to Parliament by the Minister of Labour on March 9, was reproduced in the LABOUR GAZETTE, March, 1932, page 313). The figures in the table relate only to works carried on under the 1931 Act, and do not refer to works under the Act of 1930.

EMPLOYMENT AFFORDED IN CANADA UNDER THE UNEMPLOYMENT AND FARM RELIEF ACT, 1931,  
TO END OF APRIL, 1932

	Number given employment from commencement of work to end of this month	Man-Days worked from commencement of work to end of this month	Number employed 15th of month or nearest work day if 15th not a work day	Number employed on last work day of month	Amount paid in wages from commencement of work up to end of this month

<sup>1</sup>Ontario figures are subject to revision.

With regard to the Relief Act, 1932, which was passed by the Dominion Parliament at the session recently concluded, agreements are

now being negotiated between the Dominion and Provincial governments with a view to the giving effect to its provisions.

## REPORT OF COMMITTEE OF BRITISH COLUMBIA LEGISLATURE ON UNEMPLOYMENT

A SELECT committee appointed last February by the Legislature of British Columbia presented their report on April 11. The committee was composed of Messrs. H. D. Twigg (chairman), J. Loutet, J. W. Berry, Lieut.-Col. F. Lister, T. H. Kirk, Dr. R. W. Alward, J. H. Beatty, T. D. Pattullo, A. M. Manson, Dr. W. H. Sutherland, G. S. Pearson, and W. R. Rutledge. The report of the committee has been published in pamphlet form.

The committee was instructed "to inquire into all matters, questions, and things appertaining to the said situation, together with the administration thereof and connected there-

with within British Columbia, and particularly with reference to the receipt and disbursement of all moneys received from the Dominion Government, showing how disbursed, that is to say, showing such disbursement as made directly by the province, or, if in municipal areas, by the municipal authorities on receipt of the moneys from the province, with all books, documents and correspondence relating thereto, with respect to unemployment relief, direct and indirect." The committee was also "to inquire into and examine all the phases of the administration of unemployment relief, direct

and indirect, including the construction, equipment, cost, and management of unemployment camps, with data as to rates of pay, number of persons afforded relief, direct and indirect, with power to summon witnesses and take their evidence under oath, to require the production of papers, documents, vouchers, correspondence, and books relating in any way to the subject-matter of the inquiry."

The report of the committee is in two parts, the first dealing with measures already taken with regard to unemployment, and the second dealing with suggestions as to a future solution of the difficulties arising from unemployment in the province.

### Unemployment Relief to Date

This part discusses relief work under three heads: provincial and municipal undertakings, and direct relief. The report describes the various activities that resulted from the Unemployment Relief Act, 1930, and the Unemployment and Farm Relief Act, 1931, enacted by the Dominion Parliament, and under the subsequent agreements between the provincial and Dominion Governments. (Details of this work were given in the *LABOUR GAZETTE*, March, 1932, and in previous issues.)

*Provincial Undertakings.*—The committee notes that the Dominion agreed to pay to the province 50 per cent of the cost of approved provincial works for the relief of unemployment, the province assuming responsibility for the remaining 50 per cent of the cost of such works. In order to provide a basis for the selection of men entitled to employment on relief works, the province inaugurated a system of registration, and the Employment Service of Canada was utilized to this end. This Service maintained offices and suboffices throughout the province and is stated to have proved of great value. Owing to the rush to register, the machinery and facilities of the Employment Service offices were added to by utilizing the Municipal Relief offices, Government agents, Provincial Police, and the District Engineers, to assist in registration. The Committee of the Executive Council on Unemployment Relief created sub-committees throughout the various electoral districts in the province, selected from leading citizens willing to give voluntary service. These were appointed irrespective of their political affiliations and rendered inestimable service in seeing that the employment and relief were given to those entitled and in preventing abuses of the provisions of the Relief Act.

It was agreed by the Dominion and the province that the single men and transients should be moved from the urban centres to camps. Two hundred and thirty-seven camps

were established, adjacent to the provincial works approved by the Dominion, with a total capacity of 18,340 men; 8,137,373 feet board measure of lumber was used in the construction of these camps. The average cost of food during the month of October, when work was at its height, was 60.5 cents per day per man for 140 camps and 456,702 meals. The average cost of camp overhead per man per day was 26.6 cents, or a total of 87.1 cents. The sum of 85 cents per day was deducted from the men for board. To-day the camps are operated on a direct relief basis, and food costs 29.5 cents and camp overhead 11.5 cents.

Owing to financial conditions in the fall of 1931 the province became dependent upon the Dominion to finance both the Dominion and provincial share of provincial works, and it was found necessary by the Dominion to reduce the provincial program by approximately 50 per cent and the sum of \$3,250,000 was fixed on or about October 31, 1931, and the Dominion approved the schedule of works submitted by the province as aforesaid for that amount. The report analyses the expenditures and the financing of these works.

### Municipal Undertakings

It is further noted in the report that the Dominion agreed to finance the entire cost of municipal works, except to the extent that any municipality might elect to do its own financing for its share of the approved works. For this purpose the province borrowed from the Dominion the following sums:—

(a) The sum of \$500,000 on the first day of December, 1931, under the provisions of P.C. 2993. The said Order in Council expressly provided that the said sum was for the purpose of defraying the share of the cost payable by the province and the share of the cost payable by the municipalities of municipal works.

(b) The sum of \$500,000 on the 22nd day of February, 1932, under the provisions of P.C. 399. The said Order in Council expressly provided that the said sum was for the purpose of defraying the share of the cost payable by the province and the share of the cost payable by the municipalities of municipal works.

*Direct Relief.*—The committee defines direct relief as the supply of the necessities of life—namely, food, shelter, and clothing, with, in special cases, fuel, medical treatment, etc.—to persons actually in need of the same, who are employable but unemployed. A person who is unemployable by reason of physical or other disability is not given direct relief, but

is given assistance, if necessary, by the Dominion or province, as the case may be, quite distinctly from direct relief. In unorganized territory the Provincial and Dominion Governments accept joint responsibility for cases requiring direct relief. In municipalities the Provincial and Dominion Governments are jointly responsible for destitute transients and destitute residents of the municipality without dependants. (A transient is one who entered the municipality subsequent to May 1, 1931.) In the case of men with dependants who were residents in the city or municipality prior to May 1, 1931, the cost of direct relief is borne jointly by the Dominion, province, and municipality. On account of special conditions in Vancouver, a transient is regarded as a registered destitute man who has resided in the city for less than twelve months prior to August 1, 1931.

Vouchers passed through the books of the Comptroller-General to March 20, 1932, for Provincial Direct Relief amounted to the sum of \$466,980.99, and for Municipal Direct Relief (less the Municipal share) the sum of \$478,450.84. The Dominion's share thereof amounted to the sum of \$472,715.13.

The expenditures on provincial works and direct relief up to March 31, 1932, are summarized in the report as follows:—

Provincial works.....	\$2,986,081 68
Provincial Direct Relief.....	466,980 99
Municipal Direct Relief (less Municipal share).....	478,450 84
	<hr/>
	\$3,931,513 51

Of this total, the Dominion's share, payable to the Province, is \$1,965,755.97, and the Provincial share to be loaned by the Dominion to the Province is \$1,965,757.54.

The committee investigated various allegations that had been made from time to time in the House of Commons and elsewhere alleging irregularities and extravagances in the administration of relief. After dealing with these in detail the report states as follows:—

"Your committee regrets that men in responsible positions should prefer charges of the above character without foundation in fact, thereby holding their Province up to ridicule in the eyes of their fellow-Canadians, and trusts that public opinion will demand that the fair name of this Province be protected in future by those responsible."

### RECOMMENDATIONS

The committee invited suggestions from the following officials, the Mayors of Vancouver and Victoria; The president of the Vancouver Board of Trade; the president of the Cana-

dian Manufacturers Association, B.C. Division; the president of the Union of Municipalities of British Columbia; the president of the Canadian Legion of British Columbia; the president of the Victoria Chamber of Commerce; Mr. George Kidd, Vancouver, B.C.; and the president of the Trades and Labour Council for British Columbia. They also received a delegation of militia officers. The representations of these witnesses are partly reflected in the following recommendations with which the report concludes:—

(1) *Effects of Direct Relief.*—That direct relief, being wasteful and demoralizing in its effects, should, as far as possible, be discontinued in favour of work for which some remuneration should be given.

(2) *Municipalities.*—Without overlooking the responsibility of municipalities to care for their destitute cases, your committee feels that the magnitude of the present demands upon their taxable resources requires investigation, with a view to deciding whether such responsibilities under existing unemployment conditions should not be lessened.

(3) *Transients.*—Your committee finds that many thousands of men have migrated to British Columbia from other Provinces. The Province has been saddled with 50 per cent of the direct expense in caring for these men under unemployment relief, the Dominion assuming the other one-half, and private citizens and municipalities have been saddled with 100 per cent of the care of men who have not registered or been eligible for relief. In addition, great expense has been entailed in creating organizations within the Province to handle these transients. Your committee is of opinion that the responsibility for the care of these men rests with the Provinces of origin and the Dominion, and that steps should be taken to restrict the flow of such men over the Provincial boundary during seasons of unemployment, unless arrangements can be made with the Dominion and the other Provinces to assume the entire cost of their maintenance. Your Committee is of opinion that, had this Province been faced only with the problem of its own unemployed people, the drain on its treasury, though heavy, could have been met, but when added to this is an army estimated at between 11,000 and 12,000 persons, the strain put upon the resources of the Province and its municipalities is almost more than they can bear, and some special allowances should be made to relieve a situation due more to British Columbia's geographical position and climatic advantages than to any other apparent cause.

(4) *Women.*—That the question of unemployed women with dependants should receive more attention.

(5) *Board to handle Unemployed Problems.*—That, owing to the nation-wide character of the unemployment problem, it is a national question which should be placed in charge of some permanent Board for direction, management, and control; the Board to have the fullest powers to create co-ordination between the Dominion and the Provinces, and through the latter with the municipalities.

(6) *Land Settlement*.—That land settlement for those who are land-minded and suited to such a life should be encouraged by making the acquisition of land as reasonable as possible.

(7) *Young Men*.—That young men from 18 to 25, and selected cases over that age, be placed in camps in agricultural areas and taught: (a) To work; (b) to farm; (c) citizenship. Your committee recommends that the Department of Agriculture, the experimental farms, and the University of British Columbia, supply instructors, and, as the records of these men indicate that they are suited to agricultural pursuits, that tracts of reasonable size be found for them and they be settled thereon, with a minimum of expense and liability to the Province and to the men themselves.

(8) *Colonization*.—That negotiations be opened with the Dominion Government with a view to a start on the Peace River outlet and thus give employment to many men. That investigation should be made to the end that suitable men engaged upon such work would be assisted to a reasonable extent in taking up land in the Peace River District.

(9) *Active Militia*.—That the amount payable for relief to regularly enrolled members of the non-permanent active militia who are unemployed be administered, if so desired, through their respective units; your committee being of opinion that there is grave danger of a complete break-up of these units if the enlisted men are housed in camps and unable to continue connection with their regiments. From the evidence adduced, your committee is satisfied that suitable work can be found for them regimentially.

(10) *Revenue-producing Works*.—That money and labour expended upon non-revenue-producing works is at the present time economically unsound, and that an effort should be made to set men to work in trades to which they are trained and accustomed by enlisting the advice and assistance of the heads of industries, and, if necessary, by advancing moneys on loan to

basic, established industries normally employing a large number of men, to enable these industries to reach export markets.

(11) *Imperial Conference*.—That arrangements should be made for representatives of the basic industries of British Columbia to attend the Imperial Economic Conference at Ottawa as observers to advise the Government regarding the possibilities of capturing a portion of Empire markets. Your committee is of opinion that even moderate success in this respect would give employment to many thousands of men.

(12) *Trade*.—That the Government continue to use every means to encourage efforts on the part of business men of British Columbia to resuscitate and enlarge the development of our provincial and interprovincial trade, and, further, to lend every possible assistance to recover that percentage of export trade on which this province so materially depends, by the extension of markets for its products.

(13) *Research Board*.—Probably no province in Canada has resources more diversified than British Columbia. The timber, mineral, agricultural, and fishing industries are of inestimable importance. A high percentage of farm products, much of which can be produced economically in this province, is imported from other provinces and from foreign countries. The markets for fish are much contracted and the price unsatisfactory. Our timber and mining industries are likewise suffering severely from the existing depression.

With a view to an increase of employment in these industries, and, if deemed advisable by the Dominion Research Board, to assist that body in its objects, your Committee suggests that a Provincial Advisory Committee be created, consisting of those versed in finance, transportation, industry, and scientific research in the province, who will give their services voluntarily and who will collect data and information generally on the utilization of the resources of the province, and who will, from time to time, advise the Government and business community regarding their findings.

## UNEMPLOYMENT INSURANCE AND THE HOME

*Portion of an Address delivered by Mr. Gerard Tremblay, Deputy Minister of Labour of Quebec, at a recent conference held at Montreal under the auspices of the Canadian Council on Child and Family Welfare.*

SOCIOLOGISTS distinguish two main kinds of unemployment, from their causes: cyclical or crisis unemployment and technological unemployment. If we set aside temporary disorders that is, those caused by seasonal influences, by deficient employment organizations or by exportation difficulties, unemployment may be attributed essentially to two classes of factors:—the workers may be driven away from the manufacture either by technical improvements or by reduced output. The former is technological unemployment, the latter is cyclical unemployment properly so-called. However, the event is seldom exclusively of one character or of the

other; most of the time, the substitution of mechanical force for human activity together with a reduced production simultaneously act on the employment market and the resulting unemployment is due both to cyclical and technological unemployment.

It is important not to forget these two essential causes of unemployment if we want to rightly estimate the strength of the proposed remedies or palliatives.

The scope of our subject requires us to deal with unemployment insurance. It is expedient to note, before definitely broaching the main subject of discussion, whether the proposed remedies for unemployment are

curative or merely palliative. To illustrate this, curative or permanent remedies may be, for instance, an international policy of reduced working hours, subject on one hand to increasing production of manual and mechanical labour and, on the other, to increasing consumption; or again, a gradual return of farmers to the land and the stopping of rural migration towards cities.

With regard to palliatives, some tend to decrease the extent of unemployment, especially periodical, as the undertaking of important public works, even if not urgent; others only make up for the workmen's lack of earning power, by supplying their needs in money or in kind. If these payments are free, we are putting into effect state assistance, unemployment assistance so-called, direct relief or dole supplemented by private charity; finally, if such payments are derived from contributions effected by the receiving beneficiary, we have unemployment insurance.

Insurance is a contract, by which the insured, on paying a determined premium, is entitled to compensation for his loss, in case of misfortune. According as the misfortune is death, sickness, fire, unemployment, we have: life insurance, sickness insurance, fire insurance, unemployment insurance. Thanks to the improvements made in statistical calculations, the risk of unemployment may be established fairly accurately for every branch of industry and for the whole economic life of a given nation. The unforeseen extent of the present economic crisis has modified the elements of the risk of unemployment but does not invalidate the possibility of appraising the risk scientifically. Owing to the duration and the violence of this crisis, the governments of Great Britain and Germany were compelled to supplement the national fund of unemployment insurance to the extent of about 20 per cent of the latter's normal resources. If we admit that international production has decreased about 30 per cent since 1929, we find that the difference between the resources and the insurance payments is not extraordinary. Consequently unemployment insurance is possible, even in a period of crisis and it is strictly correct when economic conditions are normal, since it is based on the scientific estimates of actuaries.

We shall consider unemployment insurance under its four classical aspects and we shall try to draw, from this study, a few conclusions that could be useful, in case a similar system of social insurance be established in Canada. With clear information: (1) As to the extent to which application may be made of unemployment insurance; (2) as to the benefits or privileges accorded to the insured; (3) as

to the financial resources of the system; (4) lastly, as to the possible means of management or administration, we shall know the main features of the problem and have every opportunity to solve it in our own country.

### (1) Scope of Application

First of all, whom will the insurance include or, if you prefer it, what limits should be placed on the scope of application of unemployment insurance? The answer must, evidently, have regard to the personal characteristics of every nation's economic life. But, as a general rule, we may say that all workmen who are under a contract for labour or hiring of services, would benefit from unemployment insurance, for all of them are more or less liable to be disbanded, to lose employment and, consequently, to fail to earn. Domestic servants or farm hands who have a long engagement are sometimes excepted for, because of the nature of their work, they are not subject to as sharp fluctuations as the average labour market.

It may be better to do one stage at a time in the application of unemployment insurance to the various industries. It would afford a better chance to gain practical experience as the insurance system extends. This was Great Britain's manner of proceeding where, from 1911 to 1920, the building industry and a few others most affected by employment fluctuations were first dealt with. Only in 1920 was the system of unemployment insurance extended to all the industries of Great Britain.

The only objection we can find in this gradual system, lies in the fact that the favoured industries would attract labourers from other industries who, being out of work, would constitute an excessive burden on the insurance funds. Likely, legislative restrictions could prevent this heavy migration of workers from a still unprotected industry to one already converted to insurance.

Here, arises the problem of seasonal industries. In Canada, it has a special interest. Are labourers working in seasonal industries to benefit from unemployment insurance?

The answer is in the affirmative but we must add immediately that the covering of their unemployment risk has to be limited to the actual active period of their industry.

Thus, let us admit, that as a general rule, the building industry is normally active eight months a year, from May to January. In this case, unemployment insurance would be enacted only during the eight active months of the building trades. As in the past, the workers of the building trades would have

to save in view of the foreseen period of unemployment and devote themselves, during the winter time, to work on the public buildings which should be done by preference, during the slack season.

Clothing trades, like others, have unfortunately become seasonal industries, and, subjected then to unemployment insurance might force employers to have a regular output and thereby stabilize the amount of employment. Certainly, one of the evident advantages of unemployment insurance is to regularize production and to decrease unemployment, just as the employer's liability for accidents and professional diseases reduced the number of accidents and morbidity through the application of labour safety devices and industrial health principles.

Finally, we must note that age and earning capacity should considerably narrow the scope of unemployment insurance. In all systems in effect (in Europe especially), only workmen from 16 to 65 years of age are entitled to benefit from unemployment insurance; at 65, the workman retires and draws from the old age pension fund which is generally contributory and compulsory.

On the other hand, the workman earning more annually than the established minimum, is not protected by insurance and must provide his own protection against loss of employment by prudently saving.

## (2) Benefits

The second angle to be considered in the study of unemployment insurance is the service of prestations or benefits to the insured; their nature, their relation to the average salary, addition in case of family responsibilities and the duration of these allowances.

From systems in force, we draw some general conclusions which may serve as guiding principles for us in this country. First of all, we note that in all existing voluntary or obligatory funds, the allowances are made in cash and not in kind.

The insured are not recipients of a charitable gift but of an exact allowance according to a legal title. Therefore they must be able to use this allowance as they like. This right is secure because of the payment in cash.

What is, as a rule, the amount of the weekly benefit paid? Is there any relation between this amount and the salary of the insured? Must this amount be limited to a determined living standard? We are confronted by two schools, whose theories have been materialized: the English and the Continental schools.

The English school, responsible for the insurance systems in Great Britain, North

Ireland, the Irish Free State, and Queensland, seems in favour of the same allowance to all the insured, regardless of the previous salary.

This system tends towards equalization of the granting of allowance under a very humanitarian motive that unemployment insurance should guarantee to all the insured, the means of a decent living, these means being much the same for all. Here is one danger in this, for the unemployment benefit, with fairly large extra benefits added for family responsibilities, amounts to as much as the actual earnings of incompetent labourers, so, we may realize that the latter, having a large family to support, might be tempted to remain unemployed as long as they could.

The Continental School, represented by countries likewise having a compulsory unemployment insurance system such as Germany, Austria, Italy, Poland, Bulgaria and by countries with a voluntary system of insurance, favours the principle of an allowance determined by the average earnings of the workmen and hardly more than 50 per cent of his salary. This method, apparently more justifiable, must occasion complicated accounts, for there are in Germany eleven classes of insured with varying salary and, in Austria, there are ten of them. In a country where a voluntary system of unemployment insurance is enforced, the method is worked out according to a professional basis. Consequently, the prestation will change according to the profession, trade and place.

From a general study of insurance systems, we find that all have special provisions enacting proportional benefits to family responsibilities. This is, indeed, an important question to be pointed out in a discussion with persons who devote themselves especially to the problem of home welfare. The basic benefit is calculated according to the needs of the individual; if married, he is granted an extra-benefit; the same process is generally carried on for every one of his children living at home and under 16 years of age. The unemployment insurance system would not fulfil its end, in case a family allowance was not added to the ordinary benefit. This system must not only provide means of living for the insured but must also contribute to the fulfilment of his natural obligations towards his family and his home.

The period of prestations is definite, otherwise the unemployment insurance would become impossible. In order to provide for a compensation in case of misfortune, the risks must be specified. The various European systems do not show the same liberality. In Germany, a compensation for a period of

26 weeks is guaranteed, Ireland, Poland and Czecho-Slovakia, the same; Queensland, 15 weeks. In Great Britain, the period of compensation was prolonged indefinitely, until the advent of the National Government; the limit of 26 weeks had been abolished a few years ago. In all other countries where voluntary and compulsory unemployment insurance system are enforced, the compensation period differs from 8 to 15 weeks.

However, because of the present economic crisis, this limit of the compensation period has undergone so many exceptions that it is no longer operative. This period was lengthened to 39 and sometimes to 45 weeks. The extension of the period is not, however, a charge upon insurance but is borne by relief fund, that is by the national budget.

### (3) Sources of Revenue

Now, we have to study the sources of revenue of the unemployment insurance fund. Here again, we shall only draw general principles.

In the established systems of compulsory insurance, the employers, the insured and the Government participate in providing funds needed while nearly all voluntary systems are financed by two of these, namely the insured and the Government. In Great Britain, the Irish Free State, Queensland, (Australia), Poland, Bulgaria and in nine cantons of Switzerland, where a compulsory unemployment insurance system operates, we find an evident tripartite participation. Two other countries, Germany and Austria, under the compulsory system, have theoretically employers and employees, but actually, the participation may be considered tripartite for the Government makes financial advances to the insurance system. Italy is the only country with a compulsory system which has strictly refrained from governmental aid in financing insurance.

In Belgium, Denmark, Finland, France, Norway, Holland, Switzerland (14 cantons), Czecho-Slovakia, where the system is voluntary, the only contributors are the governments and the workmen. The employers do not contribute. The assessments paid by the insured are different for every institution. The Government grants subsidies to the insurance fund pro rata of the assessments paid, (for instance, Belgium 66 per cent, Denmark, from 5 per cent to 30 per cent according to the wages of the insured, Netherlands, 100 per cent and sometimes more): or according to the amount of compensations paid by the fund itself as in France, Norway, Finland.

We deem it advisable to state here a few principles regarding the financial participation responsibilities. We greatly favour the tripartite participation of the employers, workmen and the Government. First, it is quite in order that the insured should contribute to the revenues of the insurance fund. As a matter of fact, he is the first to receive benefits and any system preventing its beneficiaries from contributing would dispose the latter to consider themselves as under a system of permanent relief and to make no effort to escape from abnormal employment conditions. We must add that, by this contribution, the workman keeps his self-respect. The payment of his assessment entitles him to the prestation and the able-bodied and willing workman has not to beg as a cripple and a pauper.

On the other hand, it is fair that the employers should be called upon to pay their share. As a whole, the industries of a country should normally provide its citizens with an opportunity to earn their livelihood and that of their family. Moreover, industry needs a labour reserve to draw upon when increasing production may require it; it should bear its share of the burden of maintaining such a necessary labour reserve and cannot complain thereat.

Furthermore, the State is bound to make up for inadequate private activity. Its chief duty is to maintain social peace within its territory. Is it possible to maintain a state of social quietness when an essential part of the population is without means? Then it will reach that state of despair where, having nothing to lose, it will hope that much is to be gained from the ruin of the country and the wreck of all its institutions. (Papal letter, "Casti Connubii," Pius XI). Indeed, Lloyd George, former Prime Minister of England, affirmed that, without the enforcement of an unemployment insurance system, the population of his country would have known the terrors of a revolution. Reverend Father Ryan, famous American Sociologist, also shares this belief and he asserted, at a conference given two years ago in the Knights of Columbus Hall, in Montreal, that, without unemployment insurance, England would have experienced a revolution.

He could have given the same opinion regarding Germany and all other Central European countries.

Moreover, in the opinion of the experts of the International Labour Bureau whom I had the pleasure of meeting last year, in Geneva, the unemployment problem is not an occupational problem but a national one. The resources of the whole nation must be used not merely to solve this problem permanently

but also to contribute generously for the maintenance of a necessary palliative that has proven worthy of acceptance where faithfully applied.

#### (4) Means of Administration

Now, what is to be said about the possible management or administration means? It is important that an unemployment insurance system should be operated on a co-operative and non-profit principle. The operating surpluses in periods of prosperity should go to form a reserve fund to be used to avoid bankruptcy during periods of economic crisis.

A rapid glance at the European systems shows three categories of funds:—the national fund, the industrial fund and the trade union fund. The first is to be found in the compulsory unemployment insurance system, the last two, in the voluntary unemployment insurance systems.

We prefer the national fund carried on and managed in combination with a National Employment Bureau Service. The payment of compensations being made by the employment bureau, reveals who are willfully without employment. The Employment Bureaus fund does not collect the assessments; this is done by a system of retentions in advance by which the employer is bound to deduct the assessment due from the wages of the insured and

to turn it over, on receipt of an official stamp or any kind of receipt, to the collection office, for which the Post Office or any public agency may be used.

Now, could an unemployment insurance system operate on a provincial basis, in a federal State such as ours? The answer is affirmative for we have the examples of Queensland (Australia) and of the Swiss Cantons where this system exists. However, it would be more suitable if our system of unemployment insurance were given a federal character. The whole country should support the social burdens. Otherwise, the participating provinces would be at an unfair disadvantage in regard to the non-participating provinces. We must remember that the social expenses have to be included in the net cost of production. Since the provinces have no tariff protection, the manufacturers within the limits of a Province, have to see that there is equal distribution of social expenses if they wish to avoid unsupportable and, in this case, unfair competition.

(The latter part of Mr. Tremblay's address dealt with some objections that have been made to unemployment insurance, and showed the value of such insurance as a means of maintaining the moral and material well-being of the home when the wage-earner is out of work.)

### Small Holdings for Unemployed Workers in Germany

An account by the American vice-consul at Berlin of a new German plan for establishing unemployed workers on farms, is published in the *Monthly Labour Review* (Washington), May, 1932. The federal commissioner for suburban small settlements, he says, recently announced plans for the construction of 16,000 houses for unemployed in the suburbs of German industrial cities. This number will be increased provided that tenants are found who have funds to help out with the financing. Construction will probably begin with the advent of suitable spring weather. The plans call for the construction of 2,000 houses in the Ruhr district, 1,930 near Berlin, 1,840 near Hamburg, 500 at Munich, 480 at Cologne, 456 at Dresden, 450 at Leipzig, 380 at Frankfurt, and 350 at Breslau. The remaining 7,620 houses are to be located near other large cities which are important industrially. The purpose of the agricultural project is to make the tenant (settler) independent, so that he can live entirely from the proceeds of the land placed at his disposal. The suburban project is based upon the idea that the tenant will

depend for the major part of his livelihood on work in nearby factories.

The houses are to be of wood construction, and the lots will vary in size according to the locality, so as to be large enough to furnish a medium-sized family with vegetables, fruit, and eggs. In cases where the soil is suitable, animals may be kept to provide meat, milk, and butter. The tenant, however, will still be dependent for the main part of his and his family's maintenance upon an income from some other source. The tenants for these houses are to be selected from the ranks of the unemployed. They may either be receiving the regular, the extended, or welfare unemployment benefits. These benefits are to be continued even after the tenant takes possession of the property. However, it is the intention of the authorities gradually to decrease the benefit as the tenant becomes able to provide for the upkeep of himself and his dependents. The authorities do not expect any reduction of the cost of unemployment relief through this new scheme, but they anticipate an improvement of the physical, mental,

and moral condition of the unemployed who settle on these suburban farms.

The carrying out of the scheme will cost 48,000,000 marks (\$11,424,000). This money is to be taken from the "rent tax," which is based on a Federal law, but is collected and expended by the various States for financing the building of dwelling houses.

The scheme contemplates the granting by the Government of a maximum loan of 2,500 marks (\$595) to each settler, but the actual amount will depend upon the private funds possessed by each individual and which are available for this purpose. The communes are to be held responsible for the redemption of the loans, which is to take place in 66 years, the rate of redemption being 1 per cent per annum. The tenants will pay annual interest at from 2 to 4 per cent. The lots will be given free by the communes.

The authorities calculate that a small frame house can be constructed on each lot for 1,800

marks (\$428). The remaining 700 marks (\$166.60) can be expended for furniture and essential household equipment, tools, seeds, plumbing and sewage supplies, livestock, and fowls. This accounts for the 2,500 marks loan given to the settler, who is required to apply his own work in the construction of his house and in the development of the lot. In other words, he is expected to do just as much of the work as he possibly can. The value of his labour and that of such additional free labour as may be required is estimated at 500 marks (\$119), which brings the expenditure on the project up to 3,000 marks (\$714).

The suburban houses and lots for unemployed industrial workers are not being established with the aim of making the tenant completely self-supporting, but to give him the means of providing for his own and his family's support during a temporary period of unemployment or for an indefinite period of short-time work.

### New York Pressmen's Agreement to Spread Work

An agreement supplemental to the contracts now existing, which was recently entered into by New York Printing Pressmen's Union No. 51 and New York Press Assistants' Union No. 23, with the printers' league section of the New York Employing Printers' Association, is reproduced in the *Monthly Labour Review* (Washington), May, 1932. The purpose of this agreement is to provide employment to approximately 1,200 unemployed members of the above local unions, and at the same time to give relief to the local printing employers of New York City. The adjustments set forth in this supplemental agreement, effective March 7, 1932, "apply only to those plants which co-operate in sliding their forces and absorbing their proportionate share of unemployed men."

Under the agreement the members of these local unions accept a 7 per cent reduction on the existing basic contract wage scale to meet the emergency in the industry. Working hours are also to be reduced until at least one day's work a week is provided for the 1,200 unemployed members.

The provisions of the supplemental agreement are as follows:—

1. That all plants be required to absorb men in such a way as to distribute the available work to provide for approximately 600 members of New York Printing Pressmen's Union No. 51 and 600 members of New York Press Assistants' Union No. 23.

2. That to make this absorption practicable, no member of the union be permitted to work more than four 8-hour days in any one fiscal

week until the 600 men of No. 51 and No. 23 are absorbed to the extent of getting at least one day's work per week.

3. That no firm shall work any member of the local unions more than four 8-hour days in any one fiscal week and shall so arrange a slide of their forces to be taken care of under this agreement.

4. That any plant may work a full day on Saturday at single time rates, provided that no member of the union, excepting the foreman, shall work more than four days per week.

5. That the 44-hour week as established in the existing contract shall be considered basic in figuring the adjusted rates hereinafter provided.

6. That in the application of the four 8-hour day plan, the existing overtime provisions of the contracts now in effect shall be understood to continue.

7. That any plant which shall find it practicable to work a minimum of two 6-hour day shifts in any one day shall operate at single-time rates and six days per week. Day-shift rates shall apply for the first two shifts and night rates to the second two shifts. No member of the union, excepting the foreman, shall work over 6 hours at any time during the 24-hour day.

8. That the existing contract provisions shall determine the rate for foreman with this supplemental provision, that if he works Saturday afternoon he shall be paid for this additional 4 hours of time at his minimum regular hourly rate based on 44 hours.

9. Should a plant decide to operate on a minimum two 6-hour shift basis as hereinbefore described, compensation of the foreman shall be arrived at by the foreman and the plant; provided, that the foreman shall not receive a scale less than the minimum based upon the provisions of the existing contract.

10. Subrates as provided for under the existing contract shall be eliminated.

11. That two presses over 42 inches may be operated with one pressman, with one senior and one junior feeder.

12. That a 7 per cent reduction be made on the existing basic contract wage scale for the pressmen, press assistants, cylinder and job press feeders; that said reduction is not to be regarded as a permanent change in the prevailing basic rate, but is representative of a voluntary reduction to meet existing emergencies in which the industry is involved and is to continue for a period of three months, at which time the representatives selected by the parties to the agreement shall meet for the purpose of making such revisals as may

be required, looking to the restoration of all or part of the decrease stipulated, the extension of it or a further revisal, all of which is to be calculated by the conditions of business at that time as by comparison with the conditions of the business at the time of execution of this agreement. Further, the parties hereto agree that the 7 per cent reduction herein stipulated represents a minimum relief as measured by the existing conditions but the equities involved do not justify a further reduction until there has been established a measure of uniformity in the distribution of the cost of necessary liquidation.

### Labour Educational Association of Ontario

The thirtieth annual convention of the Labour Educational Association of Ontario was held at Guelph, May 24, 1932, with delegates present from trades and labour councils, building trades councils and local trade unions in the various industrial sections of the province. President Larry O'Connell, Toronto, occupied the chair. Alderman H. Mahoney welcomed the delegates to the city, while Mr. A. McRobbie extended a welcome on behalf of the Guelph Trades and Labour Council. Mr. Tom Moore, president of the Trades and Labour Congress of Canada, in the course of his address, condemned the activities of communists and others who advocated enactment of non-contributory unemployment insurance legislation, stating that efforts along this line could only delay the realization of the objective of the *bona fide* labour movement of Canada. If labour did not contribute to such a scheme, it could not hope to secure any right to say as to the benefits to be paid or the manner in which they were disbursed, he declared, and it would become in reality public relief and not insurance.

Others who addressed the delegates were Mr. R. J. Tallon, vice-president of the Trades and Labour Congress of Canada, and president of Division 4, Railway Employees' Department, A. F. of L., and Mr. Humphrey Mitchell, Labour M.P., Hamilton, vice-president of the association.

Resolutions were adopted making the following recommendations:—

Unemployment insurance legislation on a contributory basis;

Compulsory inquiry by a coroner's jury into every death arising from any cause in industry, when an authorized request is made;

Legislation equalizing the income tax levied by municipalities in the province, and that

the collection of such levies be made compulsory;

Superannuation for all classes of municipal employment;

Legislation governing the use of paint spraying machines;

An adequate barbers' licence law for Ontario;

Raising of court witness fees to at least the minimum paid members of juries;

Amendments to the Old Age Pension Act reducing the age limit from 70 to 65 years, and eliminating the provincial residence qualification clause;

A national banking system;

Amendments of the Minimum Wage Act so as to bring boys within its provisions;

The 6-hour day and 5-day week;

Establishing of a fifth form in the public schools of the province, especially in rural and suburban localities;

Local autonomy to municipalities in the sale of beer and wine.

Another resolution concurred in expressed opposition to anyone being deported from Canada as an undesirable because of his political opinions, without charges being laid under the Criminal Code, a trial held at the place of residence, and a conviction secured, and asked that the Immigration Act be amended so as to prevent such methods being employed.

Officers elected were: President, Larry O'Connell, Toronto; Vice-president, Humphrey Mitchell, M.P., Hamilton; Secretary-treasurer, Ald. Rod Plant, Ottawa. Mr. Jos. T. Marks, Toronto, honorary president and organizer retains that office, this being a permanent appointment.

London was selected as the convention city for 1933.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on May 1, was 7,882, the employees on their payrolls numbering 799,944 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,806, having an aggregate mem-

bership of 178,076 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of May, 1932, as Reported by the Employers

The Dominion Bureau of Statistics tabulated reports from 7,882 firms who reported practically no general change in employment on May 1; the payrolls of these employers aggregated 799,944 persons, as compared with 799,544 in the preceding month. This increase was not sufficiently large to alter the index number for the preceding month, which on May 1, as on April 1, stood at 87.5, as compared with 102.2 at the beginning of May of last year. On May 1 in the ten preceding years, the index was as follows: 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3, and 1921, 85.1. The base used in calculating these index numbers is the average for the calendar year 1926.

Construction, transportation and trade recorded the greatest improvement, while there were also gains in logging and services. On the other hand, there was seasonal curtailment in coal mining; manufacturing was quieter, and highway construction showed reductions as a result of the cessation of unemployment relief works in some districts.

#### Employment by Economic Areas

Heightened activity was reported in Quebec, the Prairie Provinces and British Columbia, while the level of employment in the Maritime Provinces and Ontario was lower than on April 1.

*Maritime Provinces.*—Further but smaller reductions in staffs were indicated in the Maritime Provinces, where 599 firms reported 60,419 employees, or 300 fewer than in their last re-

turn. This loss compared unfavourably with the gain noted on May 1 of last year, when the index was some 16 points higher. Manufacturing, coal mining, transportation and railway construction showed curtailment on the date under review; the decrease in the first named took place mainly in pulp and paper and iron and steel plants, while fish-preserving factories were seasonally active. Logging, building and highway construction and hotels and restaurants recorded important gains.

*Quebec.*—Conditions improved in Quebec, according to 1,868 employers with 231,109 workers, as against 228,219 in the preceding month. Large increases were reported in transportation and building construction, while trade and logging were also busier, the latter on account of river drives. On the other hand, manufacturing, notably of metal products, recorded reduced employment, and highway and railway construction also showed declines. Employment was in less volume than on the corresponding date of a year ago, when the advance indicated was on a much greater scale.

*Ontario.*—Largely owing to curtailment in iron and steel plants and construction (the latter as a result of the cessation of unemployment relief work on the highways), there was, on the whole, a falling-off in employment in Ontario; transportation, trade and building construction, however, reported improvement. A general advance had been indicated at the beginning of April of last year, when the index was higher. The working forces of the 3,518

firms co-operating on May 1, 1932, aggregated 334,258 employees, compared with 339,867 on April 1.

*Prairie Provinces.*—Manufacturing, logging and mining showed lowered activity; in the first named group, a large share of the decline occurred in iron and steel factories. On the other hand, communications, construction (particularly on the railways), and trade recorded improvement. Statements were tabulated from 1,128 employers whose staffs rose from 105,106 persons on April 1, to 107,067 on the date under review. This advance was smaller than that registered at the beginning of May, 1931, when the index was higher than on the date under review.

### Employment by Cities

Quebec City and Ottawa showed improvement, but the tendency was downward in Toronto, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver, while Montreal firms, on the whole, indicated practically no change.

*Montreal.*—Transportation recorded a considerable seasonal advance in Montreal, and trade and building construction were also busier, but manufacturing, notably of iron and steel products, and road construction afforded less employment. The 1,053 co-operating employers, who reported 133,833 persons on their payrolls, showed no general change. The level

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—The increase in British Columbia was not so extensive as in the spring of last year, when the index was many points higher. An aggregate payroll of 67,091 workers was indicated by the 769 firms furnishing data, who had 65,633 employees in the preceding month. Logging, highway and railway construction were decidedly busier, but manufacturing (especially of pulp and paper and metal products), and transportation were not so active, while other groups showed little general change.

Table I gives index numbers by economic areas.

of employment was lower than on May 1, 1931, when gains had been indicated.

*Quebec.*—Statements were tabulated from 142 firms with 12,637 employees, as against 12,321 on April 1. Most of the improvement took place in shipping and construction, while other groups showed only slight general changes. The increase involved a rather smaller number of workers than that recorded on May 1, 1931, when the index was higher.

*Toronto.*—Building construction, trade and transportation reported increases in personnel in Toronto, but manufacturing and highway

construction were slacker. According to data furnished by 1,174 employers, their payrolls aggregated 115,695 persons, as compared with 115,941 at the beginning of April. Expansion had been indicated on May 1 of last year, and employment was then in greater volume.

*Ottawa.*—Construction and transportation registered improvement in Ottawa, but manufacturing was quieter; the general advance in the city involved a smaller number of persons than that noted at the beginning of May, 1931. Statistics were tabulated from 155 firms employing 12,940 persons, compared with 12,822

on April 1. The index was lower than in the spring of last year.

*Hamilton.*—A combined working force of 27,438 persons was reported by the 238 co-operating establishments, who had 27,599 employees on April 1. Manufacturing was slacker, while construction and transportation showed increased activity. Employment was at a lower level than in the same month of 1931, although a greater recession had then been indicated.

*Windsor and the Adjacent Border Cities.*—Moderate curtailment was shown in the Border Cities, chiefly in automobile factories. Returns

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative Weight of Employment by Districts as at May 1, 1932.....	100.0	7.5	28.9	41.8	13.4	8.4

were tabulated from 136 firms with 11,292 workers, compared with 11,497 in the preceding month. An increase in personnel had been indicated by the concerns reporting on May 1, 1931, and employment was then at a higher level.

*Winnipeg.*—Retail trade was brisker, and improvement also took place in transportation, but manufacturing, chiefly of iron and steel products, showed an important contraction. The 379 co-operating employers had 35,403 persons on their payrolls, compared with 35,642 on April 1. Employment was in less volume than on the same date of last year, when a slight decline had also been noted.

*Vancouver.*—Construction showed an increase in Vancouver, but manufacturing was not so active, according to 333 firms who employed an aggregate working force of 27,320 persons, compared with 27,404 on April 1. The index was lower than at the beginning of May of a year ago, additions to staff having then been reported.

Index numbers by cities are given in Table II.

### Manufacturing

Employment in manufactures showed a decline at the beginning of May; 4,847 establishments reported 424,030 workers, compared with 430,610 in the preceding month. There

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Cities as at May 1, 1932....	16.7	1.6	14.5	1.6	3.4	1.4	4.4	3.4

were advances in lumber mills, fish-packing and other food, building material, leather, mineral product and tobacco and beverage factories. On the other hand, pulp and paper, rubber, textile, electric current, electrical apparatus, non-ferrous metal and iron and steel works recorded reductions, those in the last named being most pronounced. Employment was in smaller volume than on May 1, 1931, when improvement had been noted.

*Animal Products, Edible.*—Continued and larger increases in employment were noted in fish-packing plants and dairies; the improve-

ment was not so extensive as that reported on May 1, 1931, when the index was higher. Statements were tabulated from 243 firms in this group, employing 17,325 workers, or 888 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces, but except in the Prairie Provinces the trend in the group as a whole was upward.

*Leather and Products.*—Employment in boot and shoe and other leather factories showed improvement, according to 244 manufacturers with 18,535 employees, as compared with 18,329 in the preceding month. The largest gains were in Quebec. The increase was

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

smaller than that noted on May 1, 1931, when the index was slightly higher.

*Lumber and Products.*—Seasonal activity caused a pronounced advance in this group, particularly in saw-mills. Data were received

from 759 employers of 31,269 persons, as against 30,095 in the preceding month. There were increases in all provinces, those in Quebec and British Columbia being greatest. Much larger additions to staffs had been regis-

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

tered on May 1, 1931, when the index was decidedly higher than at the beginning of May this year.

*Musical Instruments.*—Employment in musical instrument works showed a decline, according to the 37 co-operating manufacturers, who had 974 workers, compared with 1,115 on April 1. Employment was in less volume than in the corresponding period last year, when little change had been indicated.

*Plant Products, Edible.*—There was an increase in activity in vegetable food factories, chiefly in those producing biscuits and confectionery. The general advance involved a much smaller number of persons than that noted on May 1, 1931, when the index number stood at 101.8, compared with 93.4 at the beginning of May this year. Statements were compiled from 378 employers, whose payrolls aggregated 26,376 persons, as compared with 26,189 on April 1. Gains took place in Quebec and Ontario, but the tendency in the Maritime Provinces was downward.

*Pulp and Paper Products.*—There was a considerable contraction in these industries, in which employment was in smaller volume than in the spring of 1931. Much of the decrease on the date under review took place in pulp and paper mills, but printing and publishing plants also showed slight curtailment; on the other hand, the production of paper goods increased. The working forces of the 554 co-operating establishments aggregated 52,521 employees, as against 53,276 in their last report. Heightened activity was shown in Quebec, but elsewhere there were reductions.

*Rubber Products.*—Considerable losses were noted in rubber factories on May 1, 1932, as on the same date in 1931, when the index was many points higher. Returns were tabulated from 43 manufacturers employing 10,934 workers, or 470 fewer than at the commencement of April. Most of the decrease was in Ontario.

*Textile Products.*—There was seasonal falling-off in employment in this group at the beginning of May, according to statistics from 812 manufacturers having 84,411 persons on their payrolls, as compared with 84,617 on April 1. Cotton and woollen mills and garment and personal furnishing factories released employees. Much greater declines had been noted on May 1 of last year, when the index stood at 102.4, compared with 100.7 on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 153 plants in this group employing 15,564 persons, or 521 more than in the preceding month. This increase, which

considerably exceeded that recorded on May 1 of last year, took place chiefly in tobacco manufacturing in Quebec. Employment was at a rather higher level than on the same date in 1931.

*Chemicals and Allied Products.*—Employment in chemicals and allied products showed a moderate increase in Ontario. Information was compiled from 139 manufacturers, whose staffs included 8,362 workers, as against 8,252 in April. The gain was smaller than that of May 1 a year ago, when the index was higher.

*Clay, Glass and Stone Products.*—Building material factories in Quebec and the Prairie Provinces indicated seasonal improvement; the general gain was decidedly less than at the beginning of May last year, when the index number was much higher. The 182 co-operating firms reported 8,305 employees, as against 8,112 in the preceding month.

*Electric Current.*—Further curtailment in staffs was recorded on May 1 in electric current plants, in which activity was not so great as in the spring of 1931. Statements were received from 93 companies employing 14,098 workers, a decline of 192 as compared with their April 1 forces.

*Electrical Apparatus.*—The trend of employment in this group continued downward, 393 persons being let out from the payrolls of the 89 reporting establishments, which had 12,936 employees. Small gains had been registered on May 1, 1931, when the index was much higher.

*Iron and Steel Products.*—The rolling mill, railway car shop, automobile, structural iron and steel, wire, and some other groups reported considerable decreases in activity, but there were slight gains in cutlery, foundry and machine shop and sheet metal factories. Returns were tabulated from 755 manufacturers with 91,779 operatives, as compared with 98,220 in the preceding month. Curtailment on a smaller scale had been indicated at the beginning of May last year, when employment was in greater volume. All provinces reported losses on the date under review, but the greatest falling-off took place in Quebec, Ontario and the Prairie Provinces.

*Non-Ferrous Metal Products.*—Non-ferrous metal products showed a pronounced decline in employment, according to data from 131 firms with a working force of 12,850 persons, or 1,566 fewer than on April 1. No change in staff was reported in this group in the same month in 1931, when the index number was higher. Most of the loss on May 1 occurred in smelters and refineries, but all branches of the group were slacker.

*Mineral Products.*—Improvement was indicated in the mineral products division; the increases were similar to those noted on May 1 of a year ago, when the index number was higher than on the date under review. Reports were received from 98 manufacturers, whose payrolls included 11,691 persons, as compared with 11,410 in the preceding month. The greatest advance was in Ontario.

### Logging

Chiefly due to river-driving operations in Quebec, there was an increase in logging, according to 231 firms employing 8,934 men, or 352 more than in April. Larger gains were registered at the beginning of May, 1931, when the index was higher.

### Mining

*Coal.*—Employment in coal-mining showed a seasonal contraction, which was slightly larger than that noted in the same month of last year. The index then was somewhat higher than on May 1, 1932. Data were received from 87 operators with 23,957 employees, as compared with 25,133 in the preceding month. The decrease took place mainly in the Maritime and Prairie Provinces.

*Metallic Ores.*—There was a small reduction in metallic ore mines, chiefly in Ontario. An aggregate working force of 15,394 persons was employed by the 63 co-operating firms, who had 15,823 workers in their last report. A slight decline had been indicated at the beginning of May a year ago, when employment was more active.

*Non-Metallic Minerals (Other than Coal).*—Employment in this group showed a moderate increase; 78 employers enlarged their payrolls by 152 workers to 4,836 at the beginning of May. Quarries and other divisions reported heightened activity. The index was decidedly lower than on May 1, 1931, when improvement was also reported.

### Communications

A slight increase was noted in telegraph and telephone operation, in which the level of employment was lower than on the corresponding date of last year. The co-operating branches and companies reported an aggregate working force of 24,421 persons, compared with 24,379 on April 1, 1932.

### Transportation

*Street Railways and Cartage.*—Moderate improvement was shown in local transportation at the beginning of May, when the 165 firms from whom information was received, reported 22,985 employees, or 247 more than in the

preceding month. The index was lower than on the same date in 1931, although smaller gains had then been noted. The Prairie Provinces registered most of the advance recorded on May 1, 1932.

*Steam Railways.*—Steam railway operation afforded less employment in the Maritime and Western Provinces, while Quebec and Ontario showed increased activity. Statements were received from 99 employers in this division, whose payrolls increased from 62,000 persons on April 1 to 62,070 at the beginning of May. General curtailment had been noted on May 1, 1931, but the index was then higher.

*Shipping and Stevedoring.*—A combined staff of 14,258 men, as compared with 11,732 in the preceding month, was reported by the 87 firms furnishing statistics in the water transportation group. This gain was smaller than that noted on the same date last year, and the index then was higher. Reductions in the Maritime Provinces and British Columbia were offset by increases in Quebec and Ontario.

### Construction and Maintenance

*Building.*—Employment in building construction showed a large expansion, although it was not so active as on May 1, 1931. The working forces of the 647 co-operating contractors aggregated 22,885 persons, as against 20,372 at the beginning of April. The tendency was favourable in all provinces except British Columbia, but the greatest gains were in Quebec.

*Highway.*—Work on roads and highways declined with the conclusion of unemployment relief projects in certain districts; 1,335 men were released from the forces of the 332 employers making returns, who had 45,637 workers on May 1. The largest decrease was in Ontario, while there were gains in the Maritime Provinces and British Columbia. Additions to staffs were indicated on the same date last year, when employment was rather more active than in this spring.

*Railway.*—Thirty-seven companies and divisional superintendents in this group employed 25,869 workers, as against 23,367 in the last report. The Western Provinces reported practically all the increase, while the trend was downward in the Maritime Provinces and Quebec. Expansion involving a rather smaller number of men was noted at the beginning of May a year ago, but the index number then stood considerably above its level at the time of writing.

### Services

The service group, especially the laundry and dry cleaning division, reported heightened activity, according to statements from 285 estab-

lishments employing 21,569 persons, as against 21,467 in their last report. Employment was not quite so brisk as on May 1 in 1931, when greater gains had been indicated.

### Trade

Continued additions to personnel were shown in trade, in which 845 establishments enlarged their forces by 1,414 employees to 83,099 on the date under review. The index was lower than at the beginning of May a year ago, although the improvement then reported had been on a smaller scale. The increase on the

date under review took place chiefly in retail trade, but wholesale establishments also showed heightened activity.

### Tables

The accompanying tables give index numbers of employment by economic areas, leading cities, and industries. The columns headed "relative weight", show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1932.

## (2) Unemployment in Trade Unions at the Close of April, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are employed in work outside their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making

manufacturing industries of Quebec, particularly the garment and iron and steel trades, being a large factor in this retrogressive movement. Returns for April were compiled from a total of 1,806 labour organizations with an aggregate membership of 178,076 persons, 40,936 of whom were represented as idle on the last day of the month, a percentage of 23.0

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

In contrast to the slight improvement in conditions shown by local trade unions during February and March, a less favourable situation prevailed in April, unemployment in the

compared with 20.4 per cent of inactivity in March. Important losses in employment were recorded from April, 1931, when 14.9 per cent of the members reported were without work. The greatest curtailment of activity from March was noted in Quebec and centred chiefly, as mentioned above, in the manufacturing industries, while in Ontario recessions, on a smaller scale, and of more general distribution throughout the various industries were in-

dictated. Minor declines also occurred in Nova Scotia, New Brunswick, Manitoba, Alberta and British Columbia. Saskatchewan unions alone reported a better employment trend from March, the gains, however, being but nominal. All provinces shared in the adverse situation shown from April, 1931, Quebec, Ontario and Manitoba unions especially indicating marked slackness during the month reviewed, while in New Brunswick and Alberta also the declines were noteworthy.

Each month the records of unemployment for the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Montreal and

Halifax reported the most substantial percentages of idleness during April, which were considerably in excess of those indicated for these centres during March. In Winnipeg, Regina, Toronto and Saint John also, the level of activity was somewhat reduced. On the other hand, employment gains on a small scale were registered by Edmonton and Vancouver unions. Distinctly unfavourable conditions were reflected in Montreal, Toronto and Halifax from April a year ago, recessions of lesser degree, though appreciable, being shown by Winnipeg and Vancouver unions. Edmonton, Saint John and Regina unions also reported declines in activity which were relatively small.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

April, 1932.....	8.9	16.0	28.1	24.0	21.9	16.9	26.1	21.5	23.0

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1926, to date. At the close of April the course followed by the curve took a sharp turn upward, in contrast with the downward tendency of the previous two months, showing a greater unemployment prevalence during the month reviewed. The trend of the curve was contrary to that of April, 1931, when employment tended upward, and at the close of the month under review conditions as shown by the curve were much quieter than in April last year.

A noteworthy increase in slackness from the previous month was shown in the manufacturing industries during April, the 479 unions from which reports were tabulated, with 48,999 members, indicating an unemployment percentage of 25.5, compared with 18.4 per cent of inactivity in March. Influencing the situation to a marked degree was the curtailment of activity in Quebec garment trades and in the iron and steel trades of both Quebec and Ontario. Cigar makers, bakers and confectioners, printing tradesmen, wood, textile, fur, and hat and cap workers also reported declines in activity which were comparatively very slight. On the other hand, somewhat better conditions than in March were indicated by pulp and paper makers, glass and leather workers, and general labourers. Unemployment in the manufacturing industries also showed a decided increase over April, 1931, when 11.1 per cent of the membership involved were idle, the garment and iron and steel trades, as in the previous comparison, accounting largely for the change, though the majority of trade participated in varying measures in this adverse employment movement.

Coal miners with 49 unions reporting 17,060 members in April registered an unemployment percentage of 13.3 at the close of the month in contrast with percentages of 9.9 in March and 11.2 in April, 1931. The Alberta coal

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

mines were especially quiet, a considerable increase in idleness from March being shown, and much short time was in evidence. Several unions from this province also reported strike conditions which are not included in these tabulations. In British Columbia practically the same situation prevailed as in March, while in Nova Scotia slight improvement was noted. The Alberta situation was responsible for the unfavourable employment trend manifest in the mining industry from April, 1931. In Nova Scotia the employment volume accorded was slightly better than in April last year, and in British Columbia the change was fractional only, the tendency, however, being toward greater activity.

During April the situation in the building trades showed little change from the preceding month, although employment still remained very slack. This was manifest by the returns received for April from 249 organizations of building tradesmen, covering 24,239 members, 62.7 per cent of whom were reported idle on the last day of the month, contrasted with 62.3 per cent of inactivity in March. Some employment expansion from March was noted by electrical workers, tile layers, lathers and roofers, painters, decorators and paperhangers, bricklayers, masons and plasterers, bridge and structural iron workers and hod carriers and building labourers, which, however, was slightly more than offset by the curtailment evident among carpenters and joiners, granite and stone cutters, and plumbers and steamfitters. Building and construction activities were largely restricted from April, 1931, when 40.5 per cent of the membership included in the building trades was without work. In this comparison hod carriers and building labourers reported the same situation as in April last year, unemployment in both months, however, remaining at a rather high level. Among bridge and structural iron workers, brick layers, masons and plasterers, carpenters and joiners, granite and stone cutters, painters, decorators and paperhangers and plumbers and steam fitters, severe losses in activity were recorded with recessions of much lesser importance among electrical workers and tile layers, lathers and roofers.

The trend of employment in the transportation industries was less favourable during April than in the previous month, though the change was but fractional, the 776 organizations from which reports were compiled, with 63,249 members, showing 13.2 per cent of their members idle on the last day of the month in contrast with a percentage of 12.3 in March. The steam railway division, which constituted over 80 per cent of the entire group membership reporting, was accountable, to a large extent,

for this slightly downward employment movement from March, with contributing declines in activity, though of minor importance, among teamsters and chauffeurs. On the contrary, navigation workers reported a better situation than in March and among street and electric railway employees the level of activity remained much the same with a slight tendency toward a greater employment volume. The steam railway division, as in the previous comparison, shared most extensively in the unemployment increase apparent in the transportation industries from April, 1931, when 9.8 per cent of inactivity was reported in the group, as a whole. Declines, on a much smaller scale, however, were recorded by navigation workers and teamsters and chauffeurs, while the situation for street and electric railway employees was nominally improved.

From retail clerks 4 reports were received in April, combining a membership of 1,154 persons, 2.9 per cent of whom were idle on the last day of the month, contrasted with percentages of 3.4 in March and 2.1 in April, 1931.

Practically no variation from the previous month in the level of activity was shown by civic employees during April, according to the reports received from 74 associations, with a membership covering 8,667 persons. Of these, 484 were reported idle on the last day of the month, a percentage of 5.6, contrasted with 5.5 per cent of unemployment in March. Employment, however, was much slacker for these workers than in April, 1931, when but 0.1 per cent of the membership reported was without work.

The miscellaneous group of trades with 126 unions, reporting a membership of 5,370 persons, at the close of April indicated an unemployment percentage of 20.8, in contrast with percentages of 21.5 in March and 14.1 in April, 1931. Stationary engineers and firemen, with a gain in employment of about 4 per cent, reported the most noteworthy expansion during the month reviewed, improvement on a smaller scale being recorded by theatre and stage employees, and barbers. On the other hand, slight employment recessions occurred among hotel and restaurant employees, and unclassified workers. Pronounced curtailment was evident among hotel and restaurant employees, and stationary engineers and firemen from April, 1931, and the level of activity for theatre and stage employees, and barbers was but slightly reduced. Unclassified workers, however, reported a much better situation than in April a year ago.

Adequate work was provided for fishermen during April as in the month preceding, while in April last year 2.4 per cent of the membership involved was reported idle.

Lumber workers and loggers showed an unemployment increase during April over the previous month, the 4 unions from which reports were tabulated with 717 members, indicating 26.1 per cent of inactivity, compared with 20.5 per cent in March. The situation was, however, more favourable than in April,

1931, when the percentage of idleness stood at 37.3.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931, inclusive, and also the percentage of unemployment by provinces for April of each year from 1919 to 1929, inclusive and for each month from January 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for April, 1932

The volume of business transacted by the Offices of the Employment Service of Canada during April, 1932, as indicated by the average daily placements effected, showed a decline of 5 per cent when compared with that of the preceding month, while a loss of 17 per cent was likewise recorded when a comparison was made with April last year.

only group in which an increase was noted and of the losses recorded, those in services, logging, construction and maintenance and manufacturing were the most marked.

The accompanying chart shows the trend of employment from January, 1930, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 appli-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o-o

Construction and maintenance was largely responsible for the decline from March, although logging and manufacturing also showed fewer placements. Gains were registered in all remaining groups, the largest being in farming and services, but these were not sufficient to offset in any great degree the marked decline previously mentioned. In comparison with April, 1931, farming was the

cations for employment registered at the offices of the Service throughout Canada, computations being made semi-monthly. As may be seen from the graph, the curve, both of vacancies and of placements in relation to applications, declined during the first half of April but followed an upward course during the latter half of the month. At the close of the period, however, the levels attained

were considerably below those shown at the end of April a year ago, when the curve of vacancies was nearly six points and that of placements almost five points above those recorded at the close of the month under review. The ratio of vacancies to each 100 applications was 59.6 and 61.3 during the first and second half of April, respectively, in contrast with ratios of 65.5 and 66.8 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review were 57.7 and 59.0, as compared with 63.1 and 63.5 during April, 1931.

The average number of vacancies reported daily to the offices of the Service throughout Canada was 1,345, as compared with 1,411 in the previous month and with 1,634 in April, 1931.

The average number of applications for employment received daily by the offices during the month under review was 2,225, as compared with 2,211 in March and with 2,467 in April last year.

The average number of placements made daily by the offices of the Service during April, 1932, was 1,298, of which 464 were in regular employment and 834 in work of one week's duration or less, as compared with a total daily average of 1,371 during the preceding month. Placements in April last year averaged 1,562 daily, consisting of 547 placements in regular and 1,015 in casual employment.

During the month of April, 1932, the offices of the Service referred 35,517 persons to vacancies and effected a total of 33,744 placements. Of these, the placements in regular employment were 12,066, of which 8,373 were of men and 3,693 of women, while placements in casual work totalled 21,678. The number of vacancies reported by employers was 26,882 for men and 8,079 for women, a total of 34,961, while applications for work numbered 57,830, of which 45,793 were from men and 12,037 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932 (four months)....	44,706	86,667	131,373

## NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during April showed an increase of over 17 per cent in comparison with the preceding month but a loss of 12 per cent when compared with the corresponding month last year. There was a gain of over 16 per cent in placements in comparison with March, but a decline of nearly 12 per cent from April of last year. Fewer placements were made than in April, 1931, in all groups, except construction and maintenance, although services was the only division to show any appreciable loss. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 19; construction and maintenance, 206; trade, 35; and services, 470, of which 318 were of household workers. There were 94 men and 64 women placed in regular employment during the month.

## NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at employment offices in New Brunswick during April, were 28 per cent better than in the preceding month, but nearly 16 per cent less favourable than during the corresponding month of last year. There was a gain of over 26 per cent in placements when compared with March, but a decline of more than 13 per cent in comparison with April, 1931. Reduced placements in services were responsible for the decline from April of last year, as the changes in all other groups were small. The only industrial divisions in which a considerable number of placements were made were construction and maintenance with 87, and services 560, of which 414 were of household workers. During the month 62 men and 61 women were placed in regular employment.

## QUEBEC

There was an increase of nearly 12 per cent in the number of orders received by employment offices in the Province of Quebec when compared with the preceding month, but a decline of 7 per cent in comparison with the corresponding month last year. Placements were 8 per cent higher than in March, but showed a nominal gain only when compared with April, 1931. There was a large increase in the number of placements in the services' group over April last year. Trade also showed improvement. These gains, however, were almost entirely offset by declines in other groups, of which that in construction and maintenance was the largest. Industrial divisions in which most of the placements were effected during the month were: manufactur-

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF APRIL, 1932

Offices	Vacancies		Applicants					Regular place-ments same period 1931

\*58 Placements effected by offices since closed.

ing, 81; logging, 47; construction and maintenance, 281; trade, 61; and services, 1,185, of which 906 were of household workers. Placements in regular employment numbered 594 of men and 790 of women.

#### ONTARIO

Employment opportunities, as indicated by orders listed at Ontario offices during April, were nearly 11 per cent less favourable than in the preceding month and over 22 per cent below the corresponding month last year. There was a decline also in placements of nearly 12 per cent when compared with March, and of almost 22 per cent in comparison with April, 1931. All industrial groups participated in the declines in placements from April last year, those in construction and maintenance, however, accounting for nearly 50 per cent of the loss and those in services over 25 per cent. Of the balance, the declines in farming, manufacturing and logging were the most important. Placements by industrial divisions included: manufacturing, 442; logging, 134; farming, 786; transportation, 122; construction and maintenance, 10,417; trade, 343; and services, 3,787, of which 2,158 were of household workers. During the month 1,881 men and 1,309 women were placed in regular employment.

#### MANITOBA

During the month of April, positions offered through employment offices in Manitoba were 3 per cent higher than in the preceding month, and 61 per cent above the corresponding month last year. A similar percentage of gain was recorded in placements when compared with April, 1931, and there was an increase of nearly 4 per cent over March this year. The increase in placements over April last year was due to work provided under the Unemployment and Farm Relief Act, as the only groups to show gains were construction and maintenance, and farming. Services showed a large decrease in placements while there were nominal changes only in the other groups. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 42; farming, 928; construction and maintenance, 2,030; trade, 64; and services, 1,116, of which 923 were of household workers. Regular employment was found for 1,559 men and 478 women.

#### SASKATCHEWAN

Employment offices in Saskatchewan were notified of nearly 45 per cent more vacancies during April than in the preceding month, but nearly 12 per cent less than during the corresponding month last year. There was a

gain of nearly 48 per cent in placements when compared with March, but a decline of over 15 per cent in comparison with April, 1931. There was a considerable increase in the number of farm placements when comparison is made with April of last year, but the gain in this group was more than offset by a heavy decline in construction and maintenance, with smaller losses in services and logging. The changes in other groups were nominal only. Placements by industrial groups included: manufacturing, 55; farming, 1,175; transportation, 28; construction and maintenance, 491; trade, 47; and services, 879, of which 636 were of household workers. There were 1,292 men and 485 women placed in regular employment during the month.

#### ALBERTA

The demand for workers, as indicated by orders received at employment offices in Alberta during April, was over 12 per cent less than in the preceding month, and nearly 16 per cent below the corresponding month of last year. Placements also declined over 12 per cent when compared with March, and nearly 15 per cent in comparison with April, 1931. Farming was the only group to show any appreciable gain in placements over April last year, and this increase was attributable to work provided under the Unemployment and Farm Relief Act. Construction and maintenance showed the largest decline in placements, with somewhat smaller losses in logging and services. Changes in other groups were not important. The majority of placements made during the month were in the following groups: farming, 958; construction and maintenance, 2,101; and services, 633, of which 422 were of household workers. During the month 1,517 men and 342 women were placed in regular employment.

#### BRITISH COLUMBIA

During April, orders received at employment offices in British Columbia called for nearly 22 per cent more workers than in the preceding month and over 14 per cent in excess of the corresponding month last year. There were similar gains in placements under both comparisons. A large number of workers were sent to road construction camps which accounted for the increase in placements over April of last year. This gain was partly offset by declines in logging, services, transportation, farming and manufacturing. The changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 30; logging, 47; farming, 84; construction

and maintenance, 3,054; trade, 42; and services, 697, of which 354 were of household workers. There were 1,374 men and 164 women placed in regular employment during the month.

### Movement of Labour

During the month of April, 1932, the offices of the Employment Service of Canada effected 12,066 placements in regular employment, 5,023 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 370 were granted the Employment Service reduced transportation rate, 318 going to points within the same province as the despatching office and 52 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Reduced transportation rate certificates granted by Ontario offices during April were 66 in number, 65 of which were provincial. Of these, 58 were issued to bushmen, the Port Arthur office transferring 39, Fort William 2, and Sudbury 17, to employment within their respective zones. From Hamilton, 2 saxophone players were conveyed to Belleville, and 1 metal pattern maker to Windsor, this zone also receiving 1 metal pattern maker from Toronto. On certificates received at Cobalt 2 miners journeyed to Port Arthur. The remaining provincial transfer was of an electrician's helper shipped from Toronto to a point in the Cobalt zone. The one worker going outside the province was a blacksmith, transported from Cobalt to Amos.

The Winnipeg office was responsible for all transfers effected in Manitoba during April, which aggregated 162. Of these 121 were to provincial points, and 41 to other provinces. Included in the former were 4 farm housekeepers and 1 hotel general going to Brandon, 1 farm housekeeper to Dauphin, and 85 farm hands, 5 farm domestics, 17 building construction labourers, 3 carpenters, 1 mill worker, 1 hotel cook, 1 bushman, 1 tractor operator, and 1 baker to various centres within the Winnipeg zone. Travelling outside the province were 2 farm hands, 2 farm domestics, 2 waitresses, 1 housekeeper, and 1 millwright bound for Port Arthur and vicinity, and 27 farm hands and 5 farm domestics for employment in Saskatchewan rural areas. In addition, 1 town housekeeper proceeded to Estevan.

Workers benefiting by the Employment Service reduced transportation rate in Saskatchewan during April were 19 in number, 17 of whom went to provincial employment. Of these, the Regina office was responsible for the transfer of one teacher to Swift Current, 1 farm hand each to the Yorkton and Prince Albert zones, and of 3 farm hands and 2 teachers to employment within the Regina zone. The Swift Current, North Battleford and Saskatoon zones each received 1 farm hand from Prince Albert, which office also despatched 2 saw-mill labourers within its own zone. From Saskatoon 1 farm hand proceeded to Swift Current, 1 hotel cook to Prince Albert and 2 farm hands to employment within the Saskatoon zone. The 2 persons travelling outside the province were farm domestics who secured their certificates at Saskatoon for transportation to Edmonton.

Business transacted by Alberta offices in April involved an issue of 107 certificates, 99 provincial and 8 interprovincial. A large share of the provincial movement originated at Edmonton, from which centre 5 farm hands were sent to Drumheller and 50 farm hands, 5 farm domestics, 5 highway construction labourers, 4 saw-mill workers, 3 hotel workers, 3 labourers, 2 miners, 1 housekeeper, 1 forest ranger, 3 steamship employees, 2 tractor men, 1 mechanic and 1 truck driver to employment at various centres throughout the Edmonton zone. In addition, the Calgary office was instrumental in transferring 5 farm hands to Drumheller, 1 farm hand, 2 farm housekeepers, and 1 lumber grader to Lethbridge, and 4 farm hands within the Calgary zone. The movement outside the province was of agricultural labour, the Edmonton office despatching 6 farm hands to Saskatoon and Medicine Hat, 2 farm hands to Swift Current.

Offices in British Columbia granted 16 certificates for reduced transportation during April, all to provincial centres. From Vancouver there were transfers of 4 saw-mill workers and 1 hotel waitress to Kamloops, 3 miners to Penticton, and 2 loggers, 1 hotel worker and 1 farm hand to centres in the Vancouver zone. The Penticton zone was also the destination of 2 loggers journeying from Nelson. In addition, Prince Rupert transferred 1 farm hand and 1 farm domestic to a point within its own zone.

Of the 370 workers who secured certificates for reduced transportation during April 210 travelled by the Canadian National Railways, 152 by the Canadian Pacific Railway, 4 by the Northern Alberta Railway, 3 by the Timiskaming and Northern Ontario Railway and 1 by the Pacific Great Eastern Railway.

### (4) Building Permits Issued in Canada During April, 1932

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at \$4,237,160 during April, as compared with \$3,323,602 in the preceding month, and \$13,495,165 in the same month last year. There was, therefore, an increase of \$913,555 or 27.5 per cent in the first comparison, but a decrease of \$9,258,005, or 68.6 per cent, as compared with April, 1931. In considering these figures, it should be noted that the wholesale costs of building materials have this year averaged much lower than in any of the past twelve years.

Some 50 cities furnished detailed statistics, showing that they had issued some 450 permits for dwellings valued at over \$1,100,000 and for nearly 2,000 other buildings estimated to cost more than \$2,700,000. In addition, four cities—Brantford, Port Arthur, St. Boniface and Moose Jaw—reported that they had authorized engineering projects valued at approximately \$224,000. In March, authority was given for the erection of nearly 400 dwellings and 1,100 other buildings, valued at approximately \$900,000 and \$2,200,000, respectively, while five engineering projects valued at approximately \$128,000 were also reported.

Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia recorded increases in the value of the building permits issued during April as compared with March, 1932, the greatest gain of \$345,583 taking place in Alberta.

As compared with April, 1931, New Brunswick reported an increase in the value of the building authorized, while the remaining provinces recorded decreases, that of \$3,107,498, or 78.9 per cent, in Quebec being most pronounced.

Of the larger cities, Toronto, Winnipeg and Vancouver registered increases in the building authorized during April as compared with the preceding month, but declines as compared with April, 1931, while in Montreal there were decreases in both comparisons. Of the smaller centres, Sydney, Fredericton, Saint John, Shawinigan Falls, Chatham, Kingston, Kitchener, Niagara Falls, Oshawa, St. Thomas, Welland, Sandwich, St. Boniface, Moose Jaw and Medicine Hat reported increases in the value of the building represented by the permits issued, as compared with March, 1932, and April, 1931.

*Cumulative Record for First Four Months, 1920-1932.*—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale

prices of building materials in the first four months of the same years are also given (1926=100).

1921.....	13,500,360	27,069,872	65.2	143.1
1920.....	15,648,915	34,558,901	83.2	

The aggregate for the first four months of this year was below the average for the months, January-April, in the years since 1920. The average index number of wholesale prices of building materials, however, was also decidedly lower than in any other year of the record.

Table 1 gives the value of the building permits issued by 61 cities during April and March, 1932, and April, 1931. The 35 cities for which records are available since 1910 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. The summary showing the employment situation during April, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

Owing mainly to an increase in temporary stoppages in the coal mining and textile industries (except artificial silk yarn manufacture) employment showed a decline at 25th April as compared with 21st March. Employment also declined in iron and steel, tinplate, glass, and paper manufacture, in constructional engineering, in shipping service and in dock and harbour service. On the other hand, there was some improvement in the rubber industry, together with a further slight seasonal improvement in the building, tailoring, dressmaking, and distributive trades, and in hotel and boarding house service.

The decline in employment was most marked in the North-Eastern Division and in Wales, and there was also some decline in the Midlands and North-Western Divisions. In all these districts, and also in Scotland and Northern Ireland, employment was very bad. In London and the Southern Counties there was a slight improvement and employment was relatively moderate.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at April 25, 1932 (including those temporarily stopped as well as those wholly unemployed), was 21.4, as compared with 20.8 at March 21, 1932, and with 20.9 at April 27, 1931. The percentage wholly unemployed at April 25, 1932, was 17.3, as compared with 17.5 at March 21, 1932, while the percentage temporarily stopped was 4.1, as compared with 3.3. For males alone, the percentage at April 25, 1932, was 24.7, and for females 12.7; at March 21, 1932, the corresponding percentages were 24.1 and 12.5.

At April 25, 1932, the number of persons on the registers of Employment Exchanges in Great Britain was 2,031,888 wholly unemployed, 516,563 temporarily stopped, and 103,730 normally in casual employment, making a total of 2,652,181. This was 84,849 more than a month before, and 132,068 more than a year before. The total included 2,135,967 men, 72,363 boys, 391,757 women and 52,094 girls. Comparison of the numbers on the registers, and of the percentages unemployed, with the figures for a month before and a year before is affected by the results of legislative and administrative changes.

The 2,031,888 wholly unemployed included 755,029 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years, and (c) if 156 days' benefit had become pay-

able in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 949,024 insured persons with applications for transitional payments; 197,916 insured persons not in receipt of insurance benefit or transitional payments; and 129,919 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at April 25, 1932, was 2,712,355.

### United States

The Bureau of Labor statistics of the United States Department of Labor reports the changes in employment and earnings in April, 1932, as compared with March, 1932, based on returns made by 63,421 establishments in 16 major industrial groups, having in April 4,513,853 employees, whose combined earnings in one week were \$93,669,953. The combined totals of these 16 groups show a decrease of 2.7 per cent in employment and 5.1 per cent in earnings.

Increased employment was reported in 8 of these industrial groups. The most pronounced gain was shown in the canning and preserving group in which a seasonal increase of 29.6 per

cent in employment combined with an increase of 18.8 per cent in earnings, was reported. The building construction group reported a gain of 10.7 per cent in employment and 15.9 per cent in payrolls, while the crude petroleum, quarrying and non-metallic mining, and dyeing and cleaning groups also reported substantial gains in both employees and earnings. The increases in employment in the remaining groups—electric railroad operation, retail trade, and laundries—were small. In the eight groups in which decreased employment was shown, losses of less than 1 per cent in employment were reported in the telephone and telegraph, and the power and light groups, while decreases of less than 2 per cent were shown in wholesale trade and hotels. Employment decreased 3.6 per cent in manufacturing, 3.8 per cent in metalliferous mining, and 4.9 per cent in anthracite mining. The most pronounced decrease in number of workers (12.9 per cent) was shown in the bituminous coal mining industry.

In a statement in its official publication, the *Monthly Survey of Business*, of May 16, the American Federation of Labour estimated the number of unemployed in the United States at approximately 8,000,000 on that date.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they

are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain

either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representa-

tives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades

and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions, these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Dredging area at Penetanguishene, Ontario. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of contract, May 4, 1932. Amount of contract, approximately \$5,319. The General Fair Wages Clause was inserted in the contract.

Dredging channel at Barrington Passage, Nova Scotia. Name of contractors, Beacon Dredging Co., Ltd., Halifax, N.S. Date of contract, May 7, 1932. Amount of contract, approximately \$13,800. The General Fair Wages Clause was inserted in the contract.

##### *Contract in Group "B" (Interior Fittings, etc.)*

Supply and installation of interior fittings in the public building at Perth, Ontario. Name of contractors, The Office Specialty Manufacturing Co., Ltd., Ottawa. Date of contract, May 28, 1932. Amount of contract, \$2,143. The "B" Labour Conditions were inserted in this contract.

#### DEPARTMENT OF RAILWAYS AND CANALS

##### *Contracts in Group "A" (Construction, etc.)*

Erection of a freight shed building at the dock situated on the west side of Welland Ship Canal near Westchester Avenue, St. Catharines, Ontario. Name of contractors, Aiken, Inness & MacLachlan, Ltd., St. Catharines, Ontario. Date of contract, May 19, 1932. Amount of contract, approximately \$9,912.50. A fair wages schedule was inserted in the contract as follows:

Trade or Class of Labour	Rates of wages, not less than	Hours of labour, not more than
	per hour	per day
Blacksmiths.....	\$ 60	8
Carpenters.....	0 90	8
Compressor operators.....	0 60	8
Concrete finishers.....	0 50	8
Drill runners.....	0 45	8
Electricians.....	0 70	8
Firemen (stationary).....	0 45	8
Steam hoist engineers.....	0 75	8
Structural ironworkers.....	0 80	8
Labourers.....	0 40	8
Machinists.....	0 75	8
Painters.....	0 70	8
Riggers.....	0 65	8
Teamsters.....	0 40	8
Truck drivers.....	0 40	8
Welders and burners.....	0 55	8

Erection of a freight shed on the main dock of the port facilities at Churchill, Manitoba, using doors made by Richards-Wilcox Canadian Co., Ltd., of London, Ont. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, May

31, 1932. Amount of contract, \$92,379. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages, not less than per hour
Labourers.....	\$0 40
Firemen.....	0 45
Carpenters.....	0 75
Hoist runners.....	0 65
Loco. crane operators.....	0 75
Sheet metal workers.....	0 75
Painters.....	0 70
Structural steel workers.....	0 90
Roofers, felt and gravel.....	0 60
Glaziers.....	0 70

### POST OFFICE DEPARTMENT

Following is a statement of payments made in May, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
	\$ cts.
<i>Making metal dating stamp and type, brass crown seals, cancellors, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	489 98
<i>Making and repairing rubber stamps, daters, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	156 01
<i>Making and supplying letter carriers' uniforms.</i>	
Horn Bros. Woollen Co., Ltd., Lindsay, Ont..	2,281 50
The Miner Rubber Co., Ltd., Granby, P.Q....	950 60
Grant-Holden-Graham Ltd., Ottawa, Ont....	621 15
Needlecraft Mills Ltd., St. Hyacinthe, P.Q....	477 94
<i>Mail bag fittings.</i>	
F. W. Carling, Ottawa, Ont.....	180 00
Pritchard-Andrews Co. of Ottawa, Ltd.....	510 13
Hamilton Cotton Co., Hamilton, Ont.....	1,347 41
Parmenter & Bulloch Co., Ltd., Gananoque, Ont.....	99 08
G. W. Sadler Belting Co., Ltd., Montreal, P.Q.	439 77
<i>Scales.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	112 00
<i>Letter Boxes, etc.</i>	
Amedee Lesieur, Montreal, P.Q.....	11,660 00
<i>Ink, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	39 55
<i>Letter Carriers' Satchels.</i>	
Hugh Carson Co., Ltd., Ottawa, Ont.....	983 58

### Contract in Group "B" (Interior fittings, etc.)

Delivery of 28 connecting lugs and their structural steel supports required to be mounted on the Canal Lock Gates, 82 feet 0 inches and 83 feet 4 13/16 inches high, Welland Ship Canal. Name of contractors, Montreal Locomotive Works, Ltd., Montreal, Que. The "B" labour conditions were inserted in this contract.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements, with their schedules of wages and working conditions, that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

HALIFAX, N.S. — CONSTRUCTIVE MECHANICAL TRADES' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, Local No. 83.

Agreement to be in effect from May 1, 1932, to April 30, 1933, and from year to year until notice.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to 10 p.m.; thereafter and all work on Sundays and holidays, double time.

Wages for carpenters: 67½ cents per hour, and no carpenter will work for less without permission from the union. (The rate previously in effect was 73 cents per hour.)

HALIFAX, N.S. — CONSTRUCTIVE MECHANICAL TRADES' EXCHANGE AND THE OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, Local No. 215.

Agreement signed following strike (page 650 of this issue), to be in effect from May 1, 1932, to April 30, 1933. The wage rate for 1933 will be settled by a conference between the parties in the spring of 1933.

Hours 8 per day, 4 on Saturdays, a 44-hour week.

Overtime and holidays: double time.

Wages for plasterers: 85 cents per hour (a reduction of 15 cents).

MONCTON, N.B. — CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, Local No. 715.

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter from year to year until notice.

Only local union members to be employed.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half from 6 p.m. on regular days and from 1 p.m. on Saturdays until midnight; all other overtime and work on Sundays and holidays, double time. Work on Labour Day, treble time.

Wages for electrical workers: 70 cents per hour. A journeyman when in charge of two or more journeymen will be paid 10 cents per hour extra.

One apprentice allowed in shops employing from one to five journeymen and an additional apprentice where from 6 to 10 journeymen are employed.

Wages per hour for apprentices: first year, 20 cents; second year, 28 cents; third year, 36 cents; fourth year, 50 cents.

For work out of the city, fare, board and travelling time to be paid by employer.

No journeyman to take contracts for himself; no journeyman to work after hours except by consent of the union and the employer.

Any dispute which cannot be settled between the parties, to be referred to a joint arbitration board whose decision will be final.

**ST. JOHN, N.B.—CERTAIN FIRMS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 683.**

Agreement to be in effect from May 1, 1932, to April 30, 1933.

Hours: 8 per day, a 48-hour week from October to May inclusive, and a 44-hour week from June to September inclusive.

Overtime: time and one-half; Sundays and holidays, double time.

Wages: 65 cents per hour (a reduction of 10 cents per hour from the previous rate).

**QUEBEC, QUEBEC.—CERTAIN GENERAL CONTRACTORS AND THE NATIONAL CATHOLIC BUILDING TRADES UNIONS.**

Agreement to be in effect from May, 1932, to May, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1931, page 708, with the following exceptions:

Wages per hour for bricklayers, plasterers, masons, terrazzo experts and tile and marble setters have been reduced from \$1 to 90 cents per hour; carpenters 55 cents (formerly 55 and 60 cents). The wages for apprentices are no longer included in the wage scale. Other classes are paid at the same rate as for last year, that is: foremen carpenters, 70 cents and \$1; painters, 50 cents; tinsmiths and roofers, 50 cents; plumbers and electricians, 50 cents; labourers, 40 cents; mortar and celanite mixers, plaster mixers and hod carriers, 50 cents; cement finishers and polishers, 70 cents; wood lathers, 55 cents (or \$3 per thousand); metal lathers, 55 cents; stationary engineers on portable machines, 65 cents; drivers with one horse and cart, 55 cents; driver with two horses and cart, 80 cents.

**QUEBEC, QUEBEC.—CERTAIN PAINTING CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PAINTERS.**

Agreement to be in effect from May 1, 1932, to May 1, 1933. If either party wishes to abrogate or change the agreement, notice must be given by March 1, 1933.

Only union members to be employed or those willing to join the union. The business agent may visit the jobs.

Overtime: time and one-half to midnight; thereafter double time. No work on Sundays, Church holy days of obligation, St. Jean Baptiste Day or Labour Day.

Wages: 50 cents per hour.

One apprentice allowed to every ten journeymen with a maximum of three apprentices for each employer.

No strike or lockout until a dispute has been submitted to arbitration.

**QUEBEC, QUEBEC.—CERTAIN PLUMBING AND ELECTRICAL CONTRACTORS AND THE BROTHERHOOD OF PLUMBERS AND ELECTRICIANS OF QUEBEC, INCORPORATED.**

Agreement to be in effect from May, 1932, to April 30, 1933. If either party wishes to abrogate or change the agreement, notice must be given by April 1, 1933.

Only union members to be employed or those willing to join the union. A shop steward allowed in each shop.

Hours: 9 per day, a 54-hour week, except during June, July and August when they will be 10 per day and 5 on Saturdays, a 55-hour week.

Overtime: time and one-half to midnight; thereafter double time. No work on Sundays and Church holy days of obligation, St. Jean Baptiste Day and Labour Day, except when urgent and necessary, when double time will be paid.

Wages: 50 cents per hour.

**QUEBEC, QUEBEC.—CERTAIN TERRAZZO, TILE AND MOSAIC CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF LABOURERS.**

Agreement to be in effect from May, 1932, to April 30, 1933, and for another year unless notice of change has been given before April 1, 1933.

Only union members to be employed or those willing to join the union. Shop stewards will be allowed on each job and the business agent of the union may visit the jobs.

Wages per hour: terrazzo decorators, 90 cents; terrazzo layers, 60 to 75 cents; rough cement layers, 50 to 60 cents; labourers, 40 cents; expert men on machines, 40 to 50 cents; expert tile layers, 90 cents; ordinary tile layers, 80 cents; tile layers (floors), 60 to 80 cents.

Penalties will be paid by any contractor employing non-union men or paying less than the minimum scale of wages.

No strike or lockout until a dispute has been referred to arbitration.

**MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 23.**

Agreement to be in effect from May 1, 1932, to April 30, 1933. Either party desiring to renew it with or without change or amendment will give 90 days notice before the expiration date.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, June, 1931, page 709, with the following exceptions:

Wages per hour for mechanics: 75 cents. Wages for improvers, 35, 45 and 60 cents per hour. (The previous rates were: mechanics 80 cents, improvers 40, 50 and 70 cents.)

The regular hours are unchanged at 44 per week.

**PROVINCE OF QUEBEC (EXCEPT NORTHWESTERN QUEBEC) AND THE MARITIME PROVINCES.—WAGE SCALE AND TRADE RULES OF THE NATIONAL UNION OF SHOVELMEN AND OPERATING ENGINEERS, LOCAL No. 2 (MONTREAL).**

This schedule, which came into effect May 1, 1932, covers shovel crews, including draglines, back hoes, skimmers, clam shell and orangepeel cranes on open cut or digging, irrespective of motive power.

Hours: 8 per day, a 48-hour week.

Overtime: engineers time and one-half after 8 hours; firemen the same as engineers plus one and a half hours for raising steam and greasing; oilers straight time for overtime plus one hour for having machine ready before working time. Statutory holidays will be paid for if observed; but if required to work, a regular day's pay will be added to the regular pay for time worked. On Sundays, time and one-half for repair work; double time for digging or moving machine.

Wages per 48-hour week: shovel engineers \$52.80, shovel cranemen \$42.25, shovel firemen \$26.40, shovel oilers \$26.40; cranes, material and pile driving \$45.60. Wages per hour: hoist 1 drum 75 cents, hoist 2 and 3 drums 85 cents. Shovel crews are not to accept broken time basis of pay, except if finished before the end of the week, when they will be paid a full day's pay for any fraction of a day worked.

For work out of town, transportation will be furnished by employers.

**PROVINCE OF ONTARIO AND NORTHWESTERN QUEBEC.—WAGE SCALE AND TRADE RULES OF THE NATIONAL UNION OF SHOVELMEN AND OPERATING ENGINEERS, LOCAL No. 1 (TORONTO).**

This schedule which came into effect May 1, 1932, is the same as that in effect in the other part of the Province of Quebec and the Maritime Provinces, summarized above, with the exception of the wage scale which is as follows:

Wages for a 48-hour week: shovel engineers \$52.80; shovel cranemen \$42.25, shovel firemen \$31.70, shovel oilers \$26.40; cranes, material and pile driving \$45.60.

**TORONTO, ONTARIO.—EXCAVATING CONTRACTORS' ASSOCIATION AND THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL No. 793.**

Agreement to be in effect from March 17, 1932, to September 17, 1932, and thereafter until notice.

Only union members will be employed.

Hours: 8 per day.

Overtime: time and one-half after 9 hours and for work on Sundays and holidays.

Wages per hour: engineers \$1.10, cranemen 90 cents, firemen and oilers 65 cents.

**TORONTO, ONTARIO.—TORONTO DISTRICT, ONTARIO ASSOCIATION OF ELECTRICAL CONTRACTORS AND DEALERS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 353.**

The agreement which came into effect June 1, 1929, and was summarized in the LABOUR GAZETTE, June, 1929, page 677, and November, 1926, page 1146, and which was amended as noted in the LABOUR GAZETTE, December, 1931, page 1356, has again been amended as from

June 1, 1932, to be in effect until June 1, 1933, as follows:

There are no longer two classes of journeymen, but all journeymen are to be paid \$1 per hour (previously \$1.25 for Class "A" and 85 cents for Class "B").

The clause, which provided that members of the employers' association will be given preference in the supply of union men and that the association will give preference of employment to union members, has been omitted, and it is now provided that the employers are to employ union members only.

The hours are unchanged at 40 per week.

**OTTAWA, ONTARIO.—OTTAWA MASTER SHEET METAL WORKERS' ASSOCIATION AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 47.**

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter from year to year subject to notice.

This agreement is the same as the one previously in effect which was summarized in the LABOUR GAZETTE, September, 1929, page 1052, with the following exception:

Wages for journeymen: 90 cents per hour (a reduction of 10 cents per hour). Wages for junior journeymen; 65 cents per hour.

The regular hours are unchanged at 44 per week.

**KINGSTON, ONTARIO.—ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 115.**

Agreement to be in effect from May 1, 1932, to April 30, 1933.

This agreement is the same as that previously in effect and summarized in the LABOUR GAZETTE, July, 1931, page 834.

The rate of wages remains at 80 cents per hour with a 44-hour week.

**COBOURG, ONTARIO.—CERTAIN EMPLOYERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1071.**

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter from year to year, subject to notice.

Hours: 9 per day, 5 on Saturdays, a 50-hour week.

Overtime: time and one-half; Sundays and holidays, double time.

Wages: 60 cents per hour (a reduction of 10 cents per hour).

**HAMILTON, ONTARIO.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 67.**

Agreement to be in effect from April 1, 1932, to April 30, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1929, page 1053, and June, 1931, page 710, with the following exception:

Wages: \$1 per hour (a reduction of 10 cents per hour).

Hours are unchanged at 40 per week with single time pay for any necessary work on Saturday morning.

BRANTFORD, ONTARIO.—MASON AND GENERAL CONTRACTORS AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 9.

Agreement to be in effect from May 1, 1932, to May 1, 1933, and until notice.

Local union members to be given preference in employment.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half; holidays double time. Work between noon Saturday and 8 a.m. Monday, time and one-half.

Wages: 90 cents per hour.

COLLINGWOOD, ONTARIO.—A CERTAIN CONTRACTOR AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 19.

Agreement to be in effect from June 1, 1932, to June 1, 1933.

Hours: 9 per day, a 54-hour week.

Overtime and holidays, time and one-half; Sundays, double time.

Wages: 90 cents per hour.

FORT WILLIAM AND PORT ARTHUR, ONTARIO.—CERTAIN CONTRACTORS AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 25.

Verbal agreement in effect from May 1, 1932, to April 30, 1933. Notice to be given of any desired change.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Where three shifts are worked, they will be 7 hours with pay for 8 hours.

Overtime and all work on Sundays and holidays: double time.

Wages for bricklayers and masons: \$1 per hour (a reduction of 25 cents per hour). When men are brought in from another locality where the rate is higher, the higher rate will prevail.

For out of town work, transportation and travelling time during working hours to be paid by employers.

Safety measures are provided for.

LETHBRIDGE, ALBERTA.—CERTAIN CONTRACTORS AND THE HOD CARRIERS, BUILDING AND COMMON LABOURERS' UNION, LOCAL No. 627.

Agreement to be in effect from May 1, 1932, to May 1, 1933. Two months' notice to be given of any change.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Work on legal holidays at time and half rate.

Wages per hour: mortar mixers, 55 cents (a reduction of 15 cents), bricklayers' and stone

masons' labourers 50 cents (a reduction of 10 cents), all other labourers 45 cents (a reduction of 5 cents).

CALGARY, ALBERTA.—MASTER PAINTERS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 583.

Agreement to be in effect from April 1, 1932, to March 31, 1933.

This agreement is similar to the one summarized in the LABOUR GAZETTE, September, 1930, page 1092, as amended and noted in the LABOUR GAZETTE, June, 1931, page 711.

The wage rate is the same as that in effect since April 1, 1931, that is 75 cents per hour, with a 44-hour week.

VANCOUVER, B.C.—GENERAL CONTRACTORS' ASSOCIATION OF VANCOUVER AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, DISTRICT COUNCIL FOR VANCOUVER, NEW WESTMINSTER AND DISTRICT AND THE AMALGAMATED CARPENTERS OF CANADA, VANCOUVER AND NEW WESTMINSTER DISTRICT.

The rates of wages and working conditions agreed upon between the above organizations which were outlined in the April issue of the LABOUR GAZETTE, page 452, providing for 87½ cents per hour with an 8-hour day and a 5-day week, applied only to building, as pile drivers and floorlayers work under separate agreements.

VANCOUVER, B.C.—GENERAL CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 2404 (PILE DRIVERS, BRIDGE, WHARF AND DOCK BUILDERS) AND THE BRIDGE STRUCTURAL, ORNAMENTAL, RE-INFORCED IRON WORKERS, PILE DRIVERS' AND RIGGERS' UNION OF CANADA, LOCAL No. 1.

These schedules cover pile driving and heavy bridge, wharf and other heavy lumber construction work commonly carried out by pile drivers or bridgemen and will be in effect from May 2, 1932, to October 31, 1932.

Hours: 8 per day. When three shifts are worked, all three will be 7½ hours with 8 hours' pay.

Overtime: time and one-half for first two hours; thereafter double time. Double time for work on Sundays and holidays and also for Saturday afternoons. If called back to work after leaving, double time to be paid for time worked.

Wages per hour for bridgemen and pile drivers: 90 cents per hour; foremen \$1.12½.

Transportation to be paid to jobs where fare is in excess of 25 cents.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$6.90 at the beginning of May, as compared with \$7.22 for April; \$8.54 for May, 1931; \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. The decrease was due mainly to substantially lower prices of eggs and butter, although the prices of beef, veal, pork, milk, tea and potatoes were also lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.45 at the beginning of May as compared with \$17.09 for April; \$18.82 for May, 1931; \$21.49 for May, 1930; \$21.21 for May, 1929; \$20.57 for May, 1922; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. Fuel was slightly lower due to a seasonal decrease in the price of anthracite coal. Considerable decrease in rent was reported from several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again lower at 67.7 for May as compared with 68.4 for April; 73.0 for May, 1931; 89.7 for May, 1930; 93.4 for May, 1929; 98.5 for May, 1922; 164.3 for May, 1920 (the peak); and 64.2 for May, 1914. One hundred and seven prices quotations were lower, sixty-five were higher and three hundred and thirty were unchanged.

In the classification according to chief component materials seven of the eight main groups were lower and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group because of lower prices for barley, corn, flax, rye, bran and shorts, which more than offset increases in the prices of oats, wheat, flour, oatmeal and rolled oats; the Animals and their Products group, due to lower quotations for hides, leather, hogs, butter and eggs, which more than offset advances in the prices of canned salmon, lambs and fresh meats; the Fibres, Textiles and Textile Products group, due mainly to lower prices for raw cotton, jute, silk and wool; the Wood, Wood Products and Paper group, mainly because of decreased prices for lath and certain lines of lumber; the Non-Ferrous Metals and their Products

group, because of declines in the prices of antimony, copper, lead and zinc; the Non-Metallic Minerals and their Products group, due to lower prices for imported bituminous coal, which more than offset advances in the prices of gasoline, coal oil and anthracite coal; and the Chemicals and Allied Products group, because of declines in the prices of borax and copper sulphate. The Iron and its Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due mainly to lower quotations for coffee, bran, shorts, cured meats and butter, which more than offset higher prices for flour, oatmeal, rolled oats, potatoes and anthracite coal, and the latter due to declines in the prices of flax, barley, hogs and raw cotton, which more than offset higher quotations for wheat, oats, lambs and sulphur.

In the grouping according to origin raw and partly manufactured goods declined, because of lower prices for barley, flax, hogs, eggs and copper. Lower prices for bran, shorts, leather, butter and cured meats caused a decline in the group of fully and chiefly manufactured goods. Canadian farm products, articles of forest origin and articles of mineral origin declined, while articles of marine origin were slightly higher.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quantity for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with working-men's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal wood, coal oil and rent. In 1915

when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but

more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930 and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4, 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of

(Continued on page 728)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236.

(Continued from page 720)

figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905,

120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices showed little change during the month, sirloin steak averaging 24.8 cents per pound in May as compared with 24.9 cents in April and shoulder roast averaging 13.3 cents per pound in May as compared with 13.4 cents in April. Corresponding prices in 1931 were 29.3 cents per pound for sirloin steak and 16.4 cents for shoulder roast. Veal was down in the average from 14.6 cents per pound in April to 13.5 cents in May. Mutton was slightly higher at an average price of 22.5 cents per pound as compared with 22.1 cents in April. Fresh pork roast averaged 15 cents per pound in May as compared with 15.3 cents in April and 22.5 cents in May, 1931. Bacon was also lower at an average price of 17.2 cents per pound as compared with 17.8 cents in April and 30.9 cents in May, 1931.

Eggs were substantially lower in practically all localities, fresh averaging 19.5 cents per dozen in May, as compared with 24.7 cents

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

in April and 25.4 cents in May, 1931, and cooking averaging 15.1 cents per dozen in May, 19.9 cents in April and 20.9 cents in May, 1931. Milk was again slightly lower in the average at 9.9 cents per quart, decreases being reported from Halifax, Moncton, Three Rivers, St. Hyacinthe, St. John's, Thetford Mines, Montreal, Cobalt, Prince Albert, Nelson, Trail and Prince Rupert. Both dairy and creamery butter were generally lower, the former at an average price of 21.4 cents per pound in May as compared with 25.9 cents in April and the latter at 24.5 cents per pound in May as compared with 31.1 cents in April.

Canned vegetables were slightly higher, tomatoes averaging 10.8 cents per tin as compared with 10.5 cents in April, and canned peas averaging 10.7 cents per tin as compared with 10.5 cents in April. Onions advanced in the average from 5.2 cents per pound to 6.6 cents. Potatoes were little changed at an average price of 65.3 cents per ninety pounds, as compared with 67.2 cents in April and \$1.08 in May, 1931. Tea was substantially lower at an average price of 46.2 cents per pound as compared with 50.6 cents in April and 55.2 cents in May, 1931. Decreases were much more pronounced in the Maritime Provinces, though prices were considerably lower in Ontario and Quebec also. United States anthracite coal showed a seasonal decline, being down in the average from \$16.04 per ton in April to \$15.62 in May. Decreases were reported from St. John, Three Rivers, St. Hyacinthe, Thetford Mines, Montreal, Peterborough, Oshawa, Orillia, Niagara Falls, St. Catharines, Galt, Guelph, Kitchener, Woodstock, Stratford, St. Thomas and Timmins. Bituminous coal was also slightly lower at an average price of \$9.57 per ton as compared with \$9.65 in April. Decreases in rent were reported from Three Rivers, St. John's, Montreal and Saskatoon.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement in wheat prices was slight, No. 1 Manitoba northern cash wheat, Port Arthur and Fort William basis, averaged 62.9 cents per bushel as compared with 62.6 cents in April. The price during May ranged between a low of 60.1 cents per bushel and a high of 64.6 cents. Coarse grains for the most part were lower, western barley being down from 41 cents per bushel to 40.3 cents, flax from 95.8 cents per bushel to 93.8 cents and rye from 45.8 cents per bushel to 41.2 cents. Western oats advanced from 32.3 cents

per bushel to 35.5 cents. Flour at Toronto was slightly higher at \$5.10 per barrel. Rolled oats at Toronto also advanced 10 cents per ninety-pound bag to \$2.65. Raw sugar at New York was down from an average price of 72.5 cents per cwt. in April to 65.3 cents in May (Canadian funds), while granulated sugar at Montreal was down from \$4.37 per hundred pounds to \$4.28. Raw rubber at New York was slightly higher in the average for May at 3.5 cents per pound as compared with 3.4 cents in April. In livestock choice steers at Toronto declined from \$5.88 per hundred pounds to \$5.84 but advanced at Winnipeg from \$5.12 per hundred pounds to \$5.15. Veal calves at Toronto were down from \$5.98 per hundred pounds to \$5.29 but were higher at Winnipeg at \$5.17 per hundred pounds as compared with \$4.90 in April. Lambs at Toronto were up from \$7.58 per hundred pounds to \$10.53 and at Winnipeg from \$6.41 per hundred to \$7.38. Bacon hogs at Toronto were slightly lower at \$4.51 per hundred pounds, while the price at Montreal was unchanged at \$4.77 per hundred pounds. Creamery butter at Montreal was substantially lower at 19.7 cents per pound as compared with 23.1 cents in April. A similar decrease occurred at Toronto where the price was down in the average from 24.4 cents per pound to

20.1 cents. Fresh eggs at Montreal were slightly lower at 20.9 cents per dozen as compared with 21.4 cents in April. Raw cotton averaged slightly lower at New York at 6½ cents per pound (Canadian funds) as compared with 6.9 cents in April. The decline was said to be due in part to the favourable crop prospects, together with the belief that acreage reduction was less than had been expected earlier in the season. Raw silk at New York was down from \$1.78 per pound to \$1.69 (Canadian funds). Raw wool was down from 11 cents per pound to 10 cents. Lumber prices were again lower, red oak being down from \$75 per thousand board feet to \$73. Soft maple and birch each declined \$5 per thousand board feet, the former to \$40 and the latter to \$45. Automobile body plates were slightly higher at \$3.26 per hundred pounds. In non-ferrous metals electrolytic copper at Montreal was down from \$7.47 per hundred pounds to \$6.97, while tin advanced from 25.5 cents per pound to 28 cents. Silver was unchanged at 31.5 cents per ounce. United States anthracite coal at Toronto rose from \$12.34 per ton to \$12.51. The price of gasoline increased 1 cent per gallon to 18.5 cents at Montreal and Toronto and to 20.5 cents at Winnipeg.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924 = 100, was 61.6 for April, a fall of 2.2 per cent for the month. With the exception of an advance in meat and fish, all groups were lower than for March.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877 = 100, was 82.5 at the end of April, a decline of 1.9 per cent for the month. Foodstuffs were 1.2 per cent higher, while industrial materials declined 5.6 per cent due to substantial declines in textiles and sundries, although the minerals group was slightly higher.

COST OF LIVING.—The index number of the Ministry of Labour Gazette, on the base July, 1914 = 100, was 143 at the end of April, a decline of one point for the month, due to small decreases in food and fuel and light; the other groups were unchanged.

### Austria

WHOLESALE PRICES.—The Federal Statistical Office index number, on the base first half of 1914 = 100, was 116 for May, an advance of 3.6 per cent for the month, due to the increase in the food group.

COST OF LIVING.—The official index number, on the base July, 1914 = 100, was 107 for May, showing no change from the April figure. There was a slight increase in the food group, but all other groups were unchanged for the month.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 98.4 for April, a decline of 1.4 per cent from the March level. There were slight advances in foods of vegetable

origin, fodder and iron, but all of the other thirteen groups were included in the general decline.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 121.7 for April, a fall of 0.6 per cent for the month. All groups showed small decreases.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency), was 85.3 for April, a decline of 1.5 per cent for the month. There were advances in foods and miscellaneous vegetable products for the month, but all other groups were lower than for March.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1426 for March, a decline of 0.07 per cent for the month. Declines in foodstuffs, etc., of vegetable origin, textile manufactures and chemicals and manures were almost offset by advances in wood and wood products, animal products and non-metallic minerals and their products.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 65.5 for April, a decline of 0.8 per cent for the month. Of the ten groups, fuel and lighting materials advanced, miscellaneous commodities were unchanged, but all other groups were lower than for March.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$6.6824 at June 1, a fall of 3.4 per cent for the month. Of the thirteen groups, metals and naval stores showed advances, building materials and chemicals and drugs were unchanged, but all other groups were lower than at May 1.

*Dun's* index number, which is based on wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included, was \$128.879 at June 1, a fall of 2.6 per cent for the month and of 11.7 per cent from June 1, 1931. All of the seven groups were lower than a month previous.

**COST OF LIVING.**—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100 was 129.3 for April, a decline of 1.1 per cent from the March level. Substantial decreases were recorded in food, clothing and fuel and light, while shelter and sundries were unchanged for the month.

## IMMIGRATION TO CANADA DURING THE THREE MONTHS ENDED MARCH 31, 1932

THE accompanying tables, compiled from information issued by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during January, February and March, 1932, also certain comparative figures for the fiscal years ending March 31, 1929, 1930, 1931 and 1932.

STATEMENT OF IMMIGRATION TO CANADA, SHOWING DESTINATION FOR THE THREE MONTHS ENDED MARCH 31, 1932

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Quebec Workmen's Compensation Legislation Declared Unconstitutional by Superior Court, Montreal

THE Quebec Workmen's Compensation legislation of 1928 which established a Workmen's Compensation Board was declared to be unconstitutional in a judgment given by Mr. Justice de Lorimier, in the Superior Court, Montreal, on May 25, in the case *Paul Slanec versus Gremstead et al.* The judgment reviewed the composition of Canadian courts, and declared *ultra vires* the action of the provincial legislature in appointing commissioners having the powers of judges.

Section 36 of the Workmen's Compensation Act declares that compensation for industrial accidents shall be sought by application to the Workmen's Compensation Commission. Having declared the Commission itself illegal and the act creating it *ultra vires* of the provincial Legislature, His Lordship necessarily declared section 36 of the Workmen's Compensation Act also *ultra vires*.

In his judgment His Lordship points out that because some acts of the provincial Legislature have not been repudiated by the federal Government or others, it is not to be assumed that this implies an admission of their validity.

Workmen's Compensation Commissioners, His Lordship rules, usurp the functions of judges of the Superior Court; the province has not the right to name them, he adds, and in so doing it takes from the Governor General an exclusive power given to him under the British North America Act. He attacks, too, the absence of provision in the Compensation Commission Act for the qualifications of the commissioners, and points out that under the act anyone, lawyer or not, can be named to the commission, even persons who have no qualifications whatever. He also points out that if the province is left undisturbed in its exercise of these illegal powers, it can appoint commissions to deal with all the different classes of accidents and take from the judges of the Superior Court their exclusive right to decide all matters affecting civil rights.

The judgment follows directly on the submission to His Lordship of an action for \$2,500 brought by Paul Slanec, a workman, against his employer, William Gremstead. Slanec attacked the constitutionality of the laws and the Attorney-General intervened to uphold them, but His Lordship decided that he had not upheld them and that they are unconstitutional.

Before entering into the merits of the case, His Lordship declared, it was advisable to examine the Workmen's Compensation Act, and the law concerning the commission which administers it, to determine whether or not they are constitutional, legal and within the powers of the Provincial Legislature.

"Chapter 79 of the statute 18 George V, 1928, modified chapter 274 of the Revised Statutes of Quebec, 1925, replacing it by the Workmen's Compensation Act, sanctioned on March 22, 1928.

"Chapter 80 of the same statute 18 George V, 1928, modified chapter 275 of the Revised Statutes of 1925, replacing it by the law con-

cerning the Workmen's Compensation Commission and sanctioned on the same date.

"Until March 22, 1928," His Lordship continued, "the date of the sanction of these two last laws concerning industrial accidents and the Workmen's Compensation Commission, the judges of the Superior Court, sitting in the Circuit and Superior Courts, alone were competent and had the right to hear and adjudicate upon actions in damages resulting from industrial accidents in amounts exceeding one hundred or two hundred dollars, according to the locality in which the Circuit Court was situated.

"These are the two laws, chapters 274 and 275 of the Revised Statutes of Quebec, as modified by the statute 18 George V, 1928, chapters 79 and 80, to which the plaintiff objects.

"In effect, he concludes in his reply to the intervention (of the Attorney-General) it should be declared that section 36 of the Workmen's Compensation Act of 1928, as well as the law concerning the Workmen's Compensation Commission, and especially section 2 of it, are illegal and *ultra vires*. To this end he invokes in his favour section 96 of the British North America Act, conceived in these terms: 'The Governor General shall appoint judges of the Superior Court in districts and counties of each province, except in the courts of verification of Nova Scotia and New Brunswick.'

"On his side, the Attorney-General, who upholds the constitutionality of the laws in question, invokes in his favour particularly section 92 (of the B.N.A.), which reads as follows: 'In each province the Legislature may exclusively make laws relating to matters falling within the categories of subjects hereafter enumerated;' that is to say, among other things, 'The administration of justice in the province, including the creation, maintenance and organization of Courts of Justice for the province, having civil and criminal jurisdiction, including procedure in civil matters in these tribunals.'

"It is to be noted," His Lordship commented, "that under section 92, power is not given to provincial Legislatures to name judges, and that is because at that time there were only Superior Court judges competent to hear and adjudicate upon cases relating to matters of civil law.

"It is admitted by the plaintiff that the Legislature has power to administer justice, constitute, maintain and organize courts of civil and criminal jurisdiction, and to legislate in civil matters; but he denies the Legislature's right to name commissioners to judge cases relating to civil matters, which fall within the exclusive jurisdiction of the judges of the Superior and Circuit Courts named by the Governor General.

"What did the authors of the Canadian constitution wish to say by the terms of section 96 of the British North America Act, 1867, and what is its spirit?

"Their Lordships of the Privy Council, in the case of *Martineau and Son vs. the City of Montreal*, which is a type case, found the question which now concerns us very serious.

They declared formally that the Governor General has exclusive power to name judges of the Superior Court and that that is a cardinal disposition of the statute. They also made judicious observations on sections 96, 97, 98, 99 and 100 of our Federative Act concerning the choice, by the Governor General, of judges from among the members of the Bar, their irremovability, their salary and the precautions to be taken to ensure them complete independence.

"In truth, the functions of judges are of such importance that the Sovereign alone should have the exclusive power to name these officers. Here is what A. Castelein says on the subject in his work, 'Droit Naturel,' 1912 edition: 'The civil authority possesses, within the limits of natural and constitutional law, the triple power, legislative, executive, judicial, the exercise of which, governed by general justice, creates obligations of conscience for all citizens.'

"The Sovereign possesses the judicial power, to be exercised conformably to the exigencies of the common good. Judicial power is exacted by the first duty of the state, the efficacious protection of all rights, or the stability of public peace by the reign of law. So that the exercise of judicial power may conform with public good, the organization of this power must realize certain conditions, dictated by natural law, enlightened by the experience of peoples.

"Let us formulate these conditions in order: 1—The judicial power must be altogether distinct from the executive power and exercised by an altogether different personnel. 2—The judges must not be chosen except upon guarantees of high scientific and moral capacity; they must be assured of high salaries so that this important career may be sought by men of great merit, in sufficient numbers to permit of discarding the incompetent and also so that the incorruptibility of judges may be more assured. 3—The choice of these magistrates should be made directly by the Sovereign, so that impartiality may be better guaranteed. Once chosen, the magistrate must feel himself independent of the party in power, so that he may never render services instead of judgments. To this end he must be irremovable."

"These principles are at the basis of our constitutional law, based on the English constitution. Our constitution exacts that the Governor General name judges of the Superior Court and choose them from among the members of the Bar; that these judges must be irremovable during good behaviour, that they must not be destitute of their functions except by him upon an address of the Senate and the House of Commons; and that they must be paid by Parliament.

"Also, His Majesty the King, represented by the Governor General in Council, has, since Confederation, reserved the exclusive right to name the judges of the Superior Court in order to assure, not only their independence and impartiality, but also their competence, their scientific and moral capacity.

"They are, in effect, called upon to render justice in all actions which raise important questions of fact and law and to judge them according to the law.

"The source of these laws on the nomination, jurisdiction, competence and the right of judges of the Superior Court to exercise their functions, is the Revised Statutes of Lower Canada, sanctioned on January 21, 1861, chap-

ters 81, 78 and 79. (This statute ordered the codification of our laws.)"

His Lordship also referred to the provincial statutes of Canada, 12 Victoria, chapter 38, and 7 Victoria, statutes designed to render judges of the Court of King's Bench independent of the Crown in Lower Canada.

"Chapter 78, Revised Statutes of Lower Canada, sections 1, 2, 3 and 8, deal with the jurisdiction and powers of the Superior Court and its judges; chapter 79, sections 1, 2, 3 and 14 deal with the jurisdictions and powers of the Circuit Court presided over by a judge of the Superior Court who must hear, among other things, all civil actions where the money or value involved does not exceed \$200."

His Lordship cited at length, for purposes of reference, sections 2, 3 and 4, of chapter 78 of the statute referred to.

"These dispositions," he continued, "were incorporated in the Revised Statutes of Quebec, 1888, volume 1, of which article 2315 declares that the Superior Court is a court of record and that the judges exercise their ordinary judicial function, and of which article 2340 decrees that the Circuit Court is a court of record presided over by a judge of the Superior Court. The revised statutes of Quebec, 1909, reproduce these dispositions in articles 3072 and following, and articles 7321 and following.

"It is in this statute, in section 10, we find:

"Chapter 145, S.R.Q., 1925, articles 22 and following, decree that the Superior Court is a court of record and that its judges exercise their juridical functions in all judicial districts and electoral districts which from time to time are assigned to them. These juridical and judicial functions have always consisted in hearing, judging, and deciding, in the first instance, and following the regular course of the law, civil actions of whatever nature, and to apply faithfully the dispositions of our statutory enactments—which relate to civil matters and which have a general and permanent character, whether they refer to commercial matters, or to matters of any other nature."

"It is to be seen from these dispositions that up to the date of the sanction of the Workmen's Compensation Act, March 22, 1928, the judges of the Superior Court exercised exclusively this power to hear all actions, including industrial accidents. Thus, what constitutes the Superior Court, thus what makes a court a Superior Court is its jurisdiction, and what decides that judges of the Superior Court are judges of this court is that they have always exercised the exclusive power to preside over this court and the Circuit Court, to hear, judge, and decide, following the regular course of the law, all causes of action included in our civil and statutory law on civil matters and matters of a general and permanent character.

"These, then, are the distinctive attributes which characterize the functions of judges of the Superior Court and it is precisely some of these functions which the provincial authority wishes to have fulfilled by persons whom they qualify by the name of commissioners, when, in reality, they are judges fulfilling the duties of judges of the Superior Court, who should be named by the Governor General.

"If the Superior and Circuit Courts, until the time of the British North America Act, and even until the date of sanction of the Workmen's Compensation Act and the Work-

men's Compensation Commission Act, had had, as they have always had, jurisdiction in all cases relating to civil matters, it is because the authors of Confederation and our legislators desired that judges of the Superior and Circuit Courts who until then had presided in these courts, should continue to be named for the same purposes.

"And when section No. 96 of the Act of Confederation and His Majesty's Lords of the Privy Council, in the case of *Martineau vs. the City of Montreal*, declare that the Governor General shall appoint these judges, that means that the Governor General has the exclusive privilege and power to name the judges of the Superior Court, and that, in consequence, provincial legislatures possess neither the right nor the power to substitute other persons for these judges whatever may be the name given to them, and whatever may be their scientific and moral capacity.

"It follows that the Quebec Legislature did not possess the right to name judges or commissioners as it has done, or to pass laws for this purpose.

"In effect, it cannot be denied that the Workmen's Compensation Commissioners, in virtue of 18 George V, 1928, chapters 79 and 80, hear and decide the questions of fact and law on matters with which the Civil Code is concerned, that is to say, delicts and quasi-delicts; they preside over a court of record.

"In consequence the Legislature takes away from the jurisdiction of the Superior Court important dispositions of our civil laws in order to have them interpreted and decided by persons qualified by the name of commissioners, but who are, in reality, judges fulfilling illegally the functions of judges of the Superior Court. This is unconstitutional.

"Moreover, in virtue of our constitutional and political laws, the provincial authority agreed with the federal authority and the King that the Governor-General would have the exclusive right to name judges of the Superior Court. One of the parties to this contract cannot, without the formal consent of the other, and without the consent of the English and Canadian Parliaments, do anything to change the term; any act of one of the parties is contrary to public order and entails absolute nullity.

"Therefore, the Legislature of Quebec has taken it upon itself in the case in hand, to do an act contrary to constitutional law; it has thus committed an act contrary to public order, in consequence, an act radically null and held to be inexistent.

"It is true they seek to justify this illegal and radically null act by a disposition of the Workmen's Compensation Act, 1928, sections 28 and 29, in virtue of which they make it obligatory for the Superior Court to homologate the decisions of the commissioners in order to make them executory. In the first place, it is neither reasonable nor logical for a judge of the Superior Court to take upon himself the serious responsibility of ratifying the decision of the commissioners, of which he knows absolutely nothing, either with regard to facts or law, because they submit to the court only authentic copies of the decision without the record containing the proceedings, the questions of law raised, and the proof made.

"But if the law was passed to force the judges of the Superior Court to ratify decisions of which they know nothing, the legislature infringes on the conscience and independ-

ence of the judges and these latter have a right to refuse to submit; it must not be forgotten that the judicial power is distinct and independent from the executive power of legislatures, as it is of the executive power of the federal legislature, including the Crown.

"It would be unjust and contrary to public order to deprive a litigant of his right to be judged by his natural judge, the judge of the Superior Court named by the Governor General to hear, at first instance, with a right to appeal, and to decide all civil matters.

"It must be remembered that the law whose constitutionality is attacked exacts no qualification whatever on the part of the commissioners, so that anyone could be named to these functions. This would present a great danger. Moreover, if the legislature can thus infringe on the jurisdiction of the judges of the Superior Court and take from them part of the dispositions of our civil laws, nothing could restrain them from taking away all the other dispositions and thus cause to disappear the Superior Courts and the exclusive power of the Governor General to name judges to these courts.

"It would be possible, insofar as accidents are concerned, to have as many commissions as there are kinds of accidents—automobile accidents, tramways accidents, railway accidents, any accident resulting from causes which produce corporal or other damages. Commissions could also deal with separations as to bed and board, donations, etc. This can never have been the intention of the authors of Confederation or of our legislators.

"But, supposing that judges ratified such decisions of the commissioners. It would be none the less true that this homologation would be illegal, and that the prerogative of the Governor General to choose and name judges who should hear and judge the cases now heard and judged by commissioners or judges named by the Lieutenant-Governor of Quebec, would be taken from him; which would be contrary to public order, radically null, unconstitutional and *ultra vires*."

His Lordship cited a large number of authorities and continued:

"There have been acts of the Quebec Legislature which have not been repudiated, but it is not to be assumed that this implies an admission of the validity of these acts.

"It is not surprising that the federal Parliament has not repudiated certain of these laws, because, from the finance point of view, it had no direct interest. What seems to be inexplicable, however, is that the province assumes the responsibility of creating courts, naming commissioners or judges and defraying all their expenses.

"Was it not rather the intention of the Fathers of Confederation to have all salaries of the judges of the Superior Court and other tribunals of appeal paid, and render the administration of justice in the provinces less costly, and at the same time render the judicial power more independent of the executive and administrative powers of the legislatures as well as of the executive and administrative powers of the federal Government?

"This, it seems to this Court, gives a *raison d'être* to sections 96 and following of section VII (of the B.N.A.) entitled, 'Judicature'."

Accordingly, His Lordship declared that the Attorney General had not established the con-

stitutionality of the laws attacked by the plaintiff. The laws were illegal and unconstitutional, His Lordship declared. But in view of the importance of the question and the possibility that it would be taken to a higher court, he delayed a ruling on the damages in the case before him.

Finally, he dismissed the intervention of the Attorney General and declared section 36 of the Workmen's Compensation Act of 1928, as well as the whole of the act concerning the Workmen's Compensation Commission, and more especially its section 2, illegal and ultra vires.

### **"Incontrovertibly Contributory Negligence" a Bar to Action**

During a snowstorm three automobiles were attempting to pass a level highway crossing in Saskatchewan. The first car stuck in a snowdrift on the track, and the drivers of the other cars went to assist in releasing it. The second car was about to tow the first car backwards on a signal from the driver of the third car (the plaintiff) who stood on the track, but before the latter could give the signal, a train rushed by and struck the plaintiff, striking at the same time the rear end of the first car and the front of the second car. In the subsequent action for damages, the jury found that the engine whistle was not blown or the bell rung, as required by statute, and that the failure to give these signals caused the accident. The train conductor, the engineer and the fireman, all testified that the necessary signals were given, but their evidence was not accepted by the jury.

On appeal by the railway company, the Saskatchewan Court of Appeal held that the case should have been taken from the jury on the ground that it was evident from the plaintiff's own case, that even if the facts were that the engine crew had not given the proper warnings, the accident could not have happened but for the plaintiff's negligence in remaining on the track. Mr. Justice Turgeon, in his judgment in the Appeal Court, pointed out the difficulty in deciding whether certain admitted facts amount indisputably to negligence, or leave the existence of negligence in doubt. "A railway crossing," he said, "is used, ordinarily by the public for the purpose of walking or driving across the track; an operation requiring only a second or two of time. That this momentary use of the railway track puts the driver or the pedestrian in a position of danger is evidenced by the fact that Parliament compels railway companies to give warning of the approach of their trains, and that the Courts have determined that, notwithstanding this statutory

obligation placed upon the companies, persons approaching a crossing must do so cautiously (*Clark v. C.N.R.* (1923) S.C.R. 730 (1923) 3 W.W.R. 938). There is no doubt that in the opinion of Parliament and of the Courts, and of all reasonable persons, a railway track is a dangerous place. Now the use which the plaintiff made of the track in this case was accompanied by greater danger than is the case when one merely walks or drives across the track. In order to assist in saving another man's car, the plaintiff undertook an operation on the track which was bound to claim his attention much more than the act of walking or driving over the line ordinarily claims the attention of a traveller, and was bound also to take an appreciable period of time, and which in fact did take at least 15 minutes, according to the evidence. . . . It does not seem to have occurred to them that, in view of the difficulty in seeing and hearing caused by the storm, it would have been prudent to have somebody stationed at some little distance away to watch and to warn them of a train's approach."

After a consideration of previous judgments in similar cases his Lordship concluded as follows:—"I have referred at some length to the authorities on this question of withdrawing a case from the jury, because I think it should always be borne in mind that it is something which a judge should not do lightly, but only for reasons which are indisputably clear. Behind all these disputes lies the cardinal rule which must never be lost sight of, that, while questions of law are for the judge, questions of fact are for the jury. In my opinion the decisions of the House of Lords tend to emphasize the inviolability of this rule. Nevertheless there are cases where admittedly the defendant is entitled, as a matter of right, to have the Court declare that the plaintiff's case, considered in its legal aspect and upon an assumption of the truth of all the facts adduced, does not disclose a cause of action against him. Applying to the facts which we have here the considerations which it appears to me were applied by the Supreme Court in deciding *Smith v. C.P.R.* (1921) and similar cases, and by which I think I must be guided, I have reached the conclusion that the plaintiff's case in this action is of that defective nature. It reveals, what is 'incontrovertibly contributory negligence' on his own part, and should have been withdrawn from the jury."

*Converse versus Canadian Pacific Railway Company* (Saskatchewan), 1932, *Western Weekly Reports*, vol. 2, page 1.

### Existing Teachers' Contracts Affected by New Legislation

A qualified teacher entered into a contract of employment with a Board of School Trustees in Alberta in June, 1929. The School Act, as it then stood, provided that, unless otherwise provided in the contract, either party might terminate the contract by giving thirty days notice in writing to the other party. In 1931 the Legislature amended the School Act, one of the amendments providing that, except in the month of June, no notice shall be given by the Board without the approval of the school inspector previously given. On July 14, 1931, that is, after the new Act came into force, the Board (the defendant in this case) gave notice to the teacher (the plaintiff) that the contract of employment would be terminated at the expiration of thirty days, no approval of an inspector of such notice having been previously obtained. The teacher brought an action against the Board for wrongful dismissal.

In connection with the action two questions were submitted to the Alberta Supreme Court: (1) Was the agreement in question lawfully terminated by compliance only with the provisions of clause 6 thereof (*i.e.* of the contract)? (2) Are the provisions as to termination of an agreement as set forth in the School Act, 1931, applicable to an agreement between a teacher and a Board of School Trustees in Alberta prior to July 1, 1931?

Mr. Justice Ewing, in the Supreme Court, answered the first question in the negative and the second question in the affirmative. He held that the Act of 1931 applies to all contracts existing at July 1, 1931, and that, therefore, the trustees (the defendants) did not adopt the proper procedure in attempting to terminate the contract with the plaintiff. "The whole question," his Lordship pointed out, "is the ambit and scope of the Act. These portions of the statute are plainly remedial. Although not stated in the special case, it is public knowledge that the tenure of office of the teacher has long been a source of such friction between teachers and boards of trustees. The Legislature has more than once grappled with the problem, the last time prior to the present Act being in 1921 when the Act was put in the shape in which it appears in Revised Statutes of Alberta, 1922, ch. 51. In the 10 years that have since elapsed there has been much friction and litigation on the subject, one case, *Richards v. Athabasca School District* (1931) S.C.R. 161, going to the Supreme Court of Canada. The Legislature apparently decided in 1931 to try

another plan. There is nothing in the 1931 Act to suggest that it applies only to those contracts which were entered into after the Act was passed. On the contrary there is much to indicate the Legislature intended the new provisions to apply to all contracts. The language of the relative sections is general throughout. The evident intention of the Act was to secure uniformity in these contracts. For this purpose the Minister is given power to prescribe a standard form of contract. This standard form prevails over all alterations and amendments made without the approval of the Minister."

Mr. Justice Ewing remarked that while the new Act of 1931 affected certain existing rights, nearly every Act of Parliament does the same thing. Much confusion, he considered, would result from construing the 1931 statute in any other way than that indicated above, and by having two sets of teachers' contracts, one terminable according to the terms of a private agreement or a repealed statute, and the other terminable according to the terms of an existing statute.

An appeal by the Board against this decision was dismissed with costs by the Appellate Division, which found that the provision of the 1931 Act in regard to contracts was general, and not confined in its application to new contracts to be made after the coming into force of the Act.

### Machine Operated in Public Place must be Safeguarded

A builder who was constructing a garage at Montreal made use for this purpose of a cement mixer, which was placed partly on a laneway between two buildings, the mixer being driven by an electric motor. The laneway was used by children as a playground, and on one occasion, in the temporary absence of the operator, a boy seven years old who was riding a tricycle on the laneway put his hand on the mixing machine while it was in motion, and his hand was drawn into the machine and maimed. In an action for personal damages brought by the father on behalf of the injured boy the Superior Court at Montreal condemned the defendant to pay \$5,000 damages. This judgment was affirmed on appeal by the Quebec Court of King's Bench, and later by the Supreme Court of Canada, Chief Justice Anglin making the following comments on the case:—

"The attainment of a piece of machinery in motion for a small child is notorious, and

anybody, operating such machinery upon, or so accessible from, a highway or public place, as to make it dangerous to children lawfully about the neighbourhood, assumes the burden of so guarding the same as to make it practically inaccessible to them. To fence the machine here (as was suggested) was, probably, not practicable. But, Mr. Justice Guerin points out (in the Court of King's Bench) there was no reason why the defendant should not have it so guarded and looked after by some one of his employees that children, who were known to be in the neighbourhood, and in the habit of playing there, should be kept away from it. This duty the defendant failed to discharge, the machine in motion having been left unattended and unguarded at the moment of the accident. Of this fact there is abundant evidence, and, upon it alone, we are satisfied that the provincial Courts were justified in holding the defendant liable.

"As to contributory negligence or common fault, it is, on our opinion, almost out of the question to raise such an issue as a ground of appeal in the case of a child under eight years of age, i.e., barely above the age under which all responsibility must be denied. Eminently an issue for determination by a trial judge, an appeal from his finding upon it is almost hopeless. The trial judge, in the present instance, found in favour of the plaintiff, and his finding is conclusive."

*Bowier versus Fee* (Quebec) 1931, *Dominion Law Reports*, vol. 2, page 424.

#### **Coal Miners' Wages Security Act of Alberta held valid**

The Arcadia Coal Company, Limited, was convicted by a Police Magistrate at Drumheller in Alberta under the provisions of the

Coal Miners' Wages Security Act (Statutes of Alberta, 1928, chapter 46), and sentenced to pay a fine of \$1,000 and costs. The company was found to have operated their mine, with hired employees, without having first furnished the minister in charge of the administration of the Act with a bond or other security as provided by Section 4 of the Act. In appealing against this judgment the company contended that the Act under which the conviction was made was *ultra vires* of the Provincial Legislature, in so far as it applied to a Dominion Company operating coal mines within the Province and shipping coal to places outside. The Alberta Supreme Court affirmed the Magistrate's decision holding that the Act was purely provincial in its character, being applicable to all mine operators in the province irrespective of their status as Dominion companies or otherwise; and that it did not trench on the Dominion's power to regulate trade and commerce. Reference was made by Mr. Justice McGillivray in the course of his judgment in the Supreme Court, to the Privy Council decision in the case of *Proprietary Articles Trade Association versus Attorney General of Canada* (LABOUR GAZETTE, March, 1931, page 378), to the case of *Great West Saddlery Company versus the King* (1921); *Rex versus Nadan* (LABOUR GAZETTE, May, 1926, page 524), and other decisions of the Judicial Committee of the Privy Council or of the Supreme Court of Canada in reference to similar constitutional questions.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of June showed a seasonal improvement, according to data tabulated by the Dominion Bureau of Statistics from 7,970 firms, each employing a minimum of 15 persons, the data being representative of all industries except agriculture, fishing, hunting and highly specialized business. These firms had 816,124 employees on June 1, as compared with 801,451 on May 1. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 89.1 on June 1, as compared with 87.5 on May 1, 1932, and 103.6 on June 1, 1931. At the beginning of June in the preceding ten years, the index was as follows:—1930, 116.5; 1929, 122.2; 1928, 113.8; 1927, 107.2; 1926, 102.2; 1925, 95.6; 1924, 96.4; 1923, 98.5; 1922, 90.3 and 1921, 87.7.

At the beginning of June, 1932, the percentage of idleness reported to the Department of Labour by local trade unions stood at 22.1 in contrast with percentages of 23.0 at the beginning of May, 1932, and 16.2 at the beginning of June, 1931. The June percentage was based on the reports received by the Department of Labour from 1,800 labour organizations with a membership aggregate of 175,411 persons.

Reports received during May, 1932, from the offices of the Employment Service of Canada showed a decline in the volume of business transacted, as indicated by the average daily placements effected, when a comparison was made with the records for April; but under the yearly comparison a slight gain was shown over May, 1931. Vacancies in May, 1932, numbered 32,209, applications, 54,745, and placements in regular and casual employment, 31,039.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$6.79 for June, as compared with \$6.90 for May; \$8.16 for June, 1931; \$11.10 for June, 1930; \$10.92 for June, 1929; \$10.18 for June,

1922; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 continued to decline, being 66.6 for June, as compared with 67.7 for May; 72.2 for June, 1931; 87.7 for June, 1930; 93.4 for June, 1929; 164.3 for May, 1920 (the peak); and 64.4 for June, 1914.

The loss in working time caused by industrial disputes in Canada in June was much greater than that recorded for the previous month, and was also greater than in June last year. Seventeen disputes were in progress at some time during the month involving 3,011 workers and resulting in a loss of 38,147 working days. Corresponding figures for May, 1932, were: thirteen disputes, 1,521 workers and 31,905 working days; and for June, 1931, fourteen disputes, 1,068 workers and 17,724 working days.

### Industrial Disputes Investigation Act

During the past month majority and minority reports were received from the Board of Conciliation and Investigation appointed in connection with dispute in the coal field in Drumheller District in Alberta. Two new applications for the establishment of Boards were received. A full account of these proceedings, with the text of the report referred to, is given on another page of this issue.

### Coming convention of Trades and Labour Congress of Canada

The call for the 48th annual convention of the Trades and Labour Congress of Canada announces the opening of the meeting at Hamilton, Ont., on September 12, sessions to be held in the convention hall of the Royal Connaught Hotel, the latter being the headquarters of congress. All eligible unions are urged to send delegates, as business of importance to all workers is to come before the convention. The call refers to unemployment and under-employment as the outstanding problems that will come before the convention, and to the necessity for further building up

public opinion in favour of contributory unemployment insurance. "Consideration must also be given as to the best methods to pursue to secure adoption of Labour's proposals on other matters, such as the shortening of the work day and work week, the maintenance of the purchasing powers of the workers, the nation-wide application of old-age pension legislation, provision of work through the initiation of public works, redistribution of our population through land settlement policies, the establishment of an economic council, and the development of other social measures, all of which are directly or indirectly interlocked with the problem of unemployment and underemployment."

**Minimum wages  
in B.C. fruit  
and vegetable  
industry**

A temporary amendment to the Order of 1926 governing the Fruit and Vegetable industry in British Columbia has been decided upon by the Minimum Wage Board administering the Statute, according to Mr. Adam Bell, chairman of the Board and Deputy Minister of Labour of the Province. The text of the Order is given on another page of this issue.

Mr. Bell states that last year the Board received petitions from various companies asking that the minimum wage be suspended, which request the Board refused. With the approach of the fruit-packing season this year, similar petitions, asking the Board to reduce the wage, were presented by other companies and by the Canadian Manufacturers' Association on behalf of its fruit and vegetable canner members. Certain petitioners requested the wage to be reduced from the present rate of 30 cents per hour to 25 cents per hour, bringing it to the level of the Ontario rate. It was claimed by petitioners that the fruit packing and canning industry in British Columbia suffered from eastern competition to the disadvantage of the workers and the industry generally, in British Columbia.

Under the provisions of the Act the Board may call a conference composed of representatives of employees, employers, and the public, to deal with matters of this kind. On the recommendation of the conference a new order may be made by the Board which order becomes effective two months after promulgation. It was realized, however, that the time involved in this procedure would preclude any useful amendment so far as this season was concerned. The Act also gives the Board authority to amend an Order in cases of emergency without calling a conference.

To meet the peculiar requirements of the present situation the Board decided, as a temporary measure, to authorize a ten per cent reduction in the wages of experienced workers who put in the full working week of 48 hours. The wage is thus reduced from 30 to 27 cents per hour, but only if the full week is worked. The reduction does not apply to an employee who works less than 48 hours per week, and who must be paid the same hourly rate as formerly, nor does it apply to inexperienced help who still receive 23 cents per hour as formerly. It is stressed by Mr. Bell that the Board only availed itself of the "no-conference" provisions of the Statute in view of the emergency brought about by the approach of the fruit season. It is not contemplated to adopt this procedure with regard to any other orders, all of which still remain in full force and effect. The original order in the Fruit and Vegetable Industry still remains intact, to again become effective when the emergency rate temporarily fixed by the amending order expires in November. The minimum wage in the Fruit and Vegetable Industry is \$14.40 for a week of 48 hours, being one of the highest set by the Board, including the professional groups. The reduction therefore brings it into temporary alignment with the minimum wage fixed by the Board for other occupations.

**Standards of  
relief  
expenditure are  
suggested**

At a recent meeting of the Canadian Political Science Association, Dr. Frank G. Pedley, director of the Industrial Clinic at the Montreal General Hospital, and Executive director of the Montreal Council of Social Agencies, contributed a paper on "The Rôle of Private Charity in meeting Distress due to Unemployment." Having discussed some of the problems that unemployment creates for the State, the speaker declared that "in the present emergency the general plan initiated by the Federal Government, whereby it accepts a measure of responsibility, may be considered satisfactory. It would seem advisable, however, to have a greater uniformity of operation throughout the country... Evidently the practice of giving relief varies considerably throughout the Dominion. It cannot be argued that Montreal spent too little or Winnipeg too much, for no standards have been set to guide us in estimating the *optimum* expenditure per family per week. This marked variation in the dispensation of relief was to a considerable extent at the expense of the Federal Government. That is to say, the Federal

Government was paying a share of relief costs in different parts of the Dominion without having any real control of the adequacy or inadequacy of relief."

### Relief work by Social Agencies at Montreal

In the same paper, Dr. Pedley dealt particularly with the numerous problems connected with the care of the families of unemployed workers. This he regards as the special field of private effort. "Here", he said, "is an experimental realm which private philanthropy regards as its own. As instances of what private agencies may do some of the activities organized and carried out in Montreal last winter may be cited:

"A registration of unemployed boys was undertaken by the English speaking groups and an effort was made to associate these boys with certain institutions and group activities. Some of the boys were offered night school courses so that they might improve their chances for employment when jobs become more plentiful. Over 1,000 English speaking boys were registered in this way and unquestionably valuable results were achieved.

"A special registration bureau for office workers was set up and a lecture course lasting throughout the winter was offered to those registered. The attendance at the lectures averaged over 100 and the interest shown indicated to those responsible that the effort was well worth while.

"For the large horde of homeless men of the labouring class the City had established a refuge where meals and sleeping accommodation could be secured, but no provision was made for shelter during the day. This group was faced with days and weeks of idleness on the streets in all sorts of weather and under the most demoralizing conditions. To meet this situation a recreation centre was set up by a private committee. Several game rooms, two libraries, and a theatre engaged the attention of most of the men, but some three or four hundred attended formal classes in English, French, Arithmetic, Bookkeeping, Shorthand and Automotive engineering. This refuge was usually patronized by from four to five thousand men daily and appeared to meet the particular need fairly satisfactorily.

"Distress among women has always been less apparent than among men, but nevertheless the numbers of women in need of relief last winter was considerable. Special arrangements to occupy the time of these women were provided for the most part in one of the large women's institutions.

"Now that summer has arrived, a project is under way to secure land for gardening purposes. A considerable number of married men have applied for allotments and it is hoped in this way to occupy the time of the men during the summer months and at the same time secure for their families a supply of fresh vegetables.

"These are but instances of what private philanthropy may do in this unemployment crisis. That which is experimental—which, perhaps, is not universally accepted as necessary—seems to fall logically to private philanthropy, but that which is necessary and inescapable, should in all fairness be placed upon the common shoulders."

### Proposed pensions for blind persons of over 50 years

In connection with the proposal already noted in the LABOUR GAZETTE that Old Age Pensions should be granted to blind persons on attaining the age of 50 years, the Canadian National Institute for the Blind estimates that 52 per cent of all blind people registered in Canada are 50 years of age and over. Of these 28 per cent are between the age of 50 and 60 and 24 per cent are 70 years and over. In regard to the problems of blind adults over fifty years of age the report states as follows:—

"A few of this group may be trained and employed in Institute factories with a fair degree of success, may be placed in general industry or in independent lines of business, but the great majority cannot be successfully employed in Institute or outside industries. For a great percentage of this group, therefore, the best we can hope to do is to train them in the use of embossed print and in handicrafts which may furnish employment in the home. For those who have been employed in factories in earlier years and who, some time after passing into this age group, must be discontinued owing to low production capacity, the home occupations are also essential. There are, of course, many in this general group over seventy years of age for whom nothing can be done in the way of handicraft training. For those over the age of fifty who lack independent means of support an adequate Government allowance must represent the only solution. It is certain, however, that with satisfactory provision made for this group the Institute would, through the release of funds now allocated for relief purposes, be able to extend more employment and other services to younger, employable blind individuals."

**Alberta  
Commission on  
Public Health  
Service**

The Alberta Legislature at its recent session (LABOUR GAZETTE, April, 1932, page 412) adopted a resolution instructing the government of the province to appoint

a commission, consisting of at least five members of the Legislature, "for the purpose of (a) considering and making recommendations to the next session as to the best method of making adequate medical and health services available to all the people of Alberta; and (b) reporting as to the financial arrangements which will be required on an actuarial basis to ensure same." In accordance with this resolution a commission was appointed by the government on June 13, as follows: Hon. George Hoadley (chairman); Hon. Irene Parlby, M.L.A.; W. G. Farquharson, M.L.A.; Rudolph Hennig, M.L.A.; A. P. Mitchell, M.L.A.; Dr. W. A. Atkinson, M.L.A.; Chris Pattinson, M.L.A.; and Geo. E. Cruickshank, M.L.A.

**Cost of sickness  
to average  
family**

The results of a study of the cost of sickness were presented last May to the American Medical Association in a paper read by Dr.

D. B. Armstrong, 3rd vice-president of the Metropolitan Life Insurance Company. Statistics obtained from 8,677 families showed that 94.5 per cent of these families had incurred some outlays for sickness or injury during the period covered, that is, the twelve months ending October, 1931. These expenditures averaged 3 per cent of the family incomes; and of the \$98.46 spent per family, \$39.19 was spent for the doctor; \$15.59 for the dentist, and \$13.40 for hospital or sanatorium. The next largest item is for drugs, which cost \$12.71.

Dr. Armstrong suggests that preventive medical care offers the medical profession an unexplored and possibly remunerative field in the provision of such services as health examinations, immunization, and personal health guidance. "The problem of assuring adequate medical care," he concludes, "to all of the people at an attainable cost and by an equitable procedure, in a manner that will enhance the practice of preventive medicine, insure the economic and scientific integrity of the practitioner, and improve the health status of the population, is one that calls for the greatest degrees of imagination, co-operative enterprise, and leadership on the part of every physician and of organized medicine in general.

**"Unemployment  
and Relief in  
Ontario,  
1929-32"**

During the past year the Unemployment Research Committee, a voluntary association of citizens, has made a careful study of unemployment relief methods and problems in Ontario. Dr. H. M. Cassidy, assistant professor of Social Science at the University of Toronto, has been in charge of the research. The result of his work is a book of about 250 pages, which is being published during the present month, entitled "Unemployment and Relief in Ontario, 1929-32." The book discusses the extent of unemployment and destitution, the relief measures sponsored by the Dominion and Provincial Governments, municipal relief methods and problems, the private relief program, social consequences of unemployment and the problem of financing relief measures, and in the concluding chapter the findings of the study are summarized and suggestions for future relief policy are presented. The study is based upon first-hand investigation of the unemployment situation in leading municipalities of the province, including Toronto, Hamilton, Ottawa, London, York Township, Windsor, East York Township, Kitchener, Brantford, St. Catharines, Oshawa, Kingston, Niagara Falls, St. Thomas, Stratford, Chatham, and it describes and compares methods of relief employed in these and other communities. The book presents carefully prepared statistical tables showing the extent of unemployment and destitution in leading cities of the province, the ever-mounting cost of direct relief, the cost of relief works, the extent of rentals in arrears, the burden of relief upon the taxpayer, etc. It points out trends in relief policies, shows where there have been weaknesses, and suggests certain changes in relief policies. The study has been made possible by financial contributions from a few interested persons, mainly members of the committee, and by the co-operation of the University of Toronto.

An article by Professor Cassidy giving some of the conclusions that were reached in the course of this inquiry, will be found on another page of this issue.

**British report  
on Empire  
Migration**

The Economic Advisory Council, which was established in Great Britain in 1930 (LABOUR GAZETTE, March, 1930, page 257) recently published a report from one of its committees on the subject of Empire Migration. This report is outlined in the *Ministry of Labour Gazette*, for June. The Committee refer, on the one hand, to the declining birth-

rate, and to the other factors which tend to make migration of less importance than formerly as a means of relieving the pressure of population; they also emphasize the fact that migration is a selective process, taking from the country precisely those elements in the population of which the country has most need. On the other hand there is, for the time being at least, a great surplus of labour, particularly in some important and highly localized industries. Large scale migration therefore is of doubtful value to this country, economically, as a long-term policy; but it would be of economic advantage to us as an emergency policy for the next few years, i.e., during the continuance of the present excessive unemployment.

From the point of view of the Dominions, however, the position is almost exactly reversed. Owing to the extreme depression in agriculture, and particularly in wheat-growing, they are unable at present to absorb agricultural settlers; and it seems unlikely that for many years to come they will be as ready to welcome new immigrants as they were in the post-war decade.

The committee then proceed to consider other reasons, apart from the economic, which may properly influence the migration policy of this country, such as the relatively sparse population of the Dominions; the desirability that the added population which is needed should be predominantly British; the fact that the Dominions are, in proportion to their population, by far our best customers; and the need of an outlet, in appropriate surroundings, for persons of active temperament, apart from any national and Imperial considerations. For all these reasons the Committee regard it as of great importance that a steady flow of British migrants to the Dominions should be maintained, though they think it probable that this will be on a much smaller scale than in past years.

#### **Co-operative service at Trail, B.C.**

A co-operative bus service has been organized by employees of the smelting company at Trail, B.C. who reside at Rossland, seven miles distant from their place of work. About 400 workmen require daily transportation over this distance, which formerly had been provided by means of private cars and a bus service. On the initiative of Mr. John E. Gordon, formerly chairman of the Committee on Consumers' Co-operation of the Alberta Federation of Labour, and now residing at Rossland, a co-operative organization has now been formed under the title of the Co-operative Transportation Society. After sufficient reserves have been built up, the operating surplus will be refunded on the usual "purchase dividend"

basis. The *Canadian Co-operator*, June, 1932, in a note on this development, says: "As the need grows it is intended to increase the equipment when further economies can be effected in the purchase of gas, oil, etc. With the loyal support of the membership, there is no reason why the whole of the public transportation system between the two places should not be under the control of the people who use it."

#### **Progress of co-operative industry in Great Britain during the depression**

In the *Canadian Congress Journal* for June, Mr. George Keen, general secretary-treasurer of the Co-operative Union of Canada, contributes an article entitled "The Depression and its Causes." In the course of this article Mr. Keene describes the British co-operative movement as one in which demand is organized in advance of production.

"It will be interesting", he says, "to quote the experience of the movement during two of these years of depression, the statistics for the third year not yet being available. As to employment, the movement increased the number of its workers by 9,666 in 1929 over the total of the previous year, and in 1930 by 8,755 over 1929; the increases of productive workers being 2,839 and 7,564 respectively. The total number of employees in 1930 was 257,491. Of that number, 117,672 were engaged in production and 139,819 in distribution. The payroll for productive workers only was increased in 1929 by £805,429 and a still further increase was recorded in 1930 of £645,557. Distributive wages increased in 1929 by £952,576 and again in 1930 by £334,918. The sales of the retail societies, which absorbed the output of the productive departments, showed an increase of £7,577,544 in 1929 over 1928 and of £350,902 in 1930 over 1929. Owing to the lower prices ruling in 1930 than in the previous year the increase in quantity sold was greater than was revealed by the sales expressed in terms of money.

"The total sales of the retail societies for 1930 were £217,318,001. The net trade surplus, or profit, for 1930, exceeded that of 1929 by £505,914, the total being £22,114,640. Approximately four-fifths of this huge sum, which would otherwise have augmented the fortunes of a comparatively few, were returned to the consumers in purchase dividends, to that extent, increasing their purchasing power, and stimulating the demand for production; the balance being used for the payment of interest on capital and appropriations to reserve, charitable and educational funds."

### **Economic Conference in Australia**

The following recommendations, made by a special economic committee in Australia, were submitted last April by the Commonwealth Government at a conference with the Premiers of the various States which was held to consider the economic and financial situation. The Commonwealth Government and one State government accepted them; three state governments accepted them with reservations, notably where they were concerned with wage reductions; and the governments of the two remaining States, the most populous in the Commonwealth, rejected them. In these circumstances it proved impossible to achieve the essential object of the Conference—the adoption of a comprehensive scheme for restoring employment—but arrangements were made for a temporary scheme to relieve unemployment during the next few months by raising a loan of three million pounds for expenditure on relief works. This scheme leaves aside the questions of wage reduction and manipulation of the rate of exchange, on which the various Governments were divided in opinion. It was understood that the proposals were to be revived by the Commonwealth at another conference of governments to be held in the near future to discuss a more general plan for economic reconstruction.

The proposals as submitted at the Conference were as follows:—

(1) That equilibrium between costs and prices be sought as a basis for the restoration of employment; (2) That Parliament authorize the Commonwealth Bank to manage the exchange rate to this end, taking into account economic considerations; (3) That the State Parliaments take action to empower arbitration courts and wages boards to fix wages in accordance with economic conditions; (4) That all price-fixing authorities complete the reduction of real wages by 10 per cent below the level of 1928 where this has not already been done; (5) That the State Governments take action to complete the reductions in interest rates provided in the Premiers' Plan; (6) That Budget deficits for 1932-33 should not exceed 12 million pounds; (7) That any Government loan expenditure or assistance to private industry made during the period which must elapse before restoration of employment be subject to the safeguards set out in the report; (8) That the Commonwealth Government systematically revise the tariff with the object of promoting the greatest employment throughout industry, and not only in the industry directly concerned in each item; (9) That Commonwealth and State employ-

ment councils be constituted to bring together the best organizing ability of each State, and that these councils push on with measures to realize the possibility of substituting employment for sustenance, and of promoting subsistence farming, and to advise on all unemployment measures.

### **Workmen's compensation in South Africa**

Reference was made in the LABOUR GAZETTE, July, 1931, page 772, to a new Workmen's Compensation measure that was introduced in the South African Parliament last year by the Minister of Labour. After discussion in the House of Assembly, the bill, which introduced the principle of compulsory insurance, was referred to a technical committee, the report of which has now been published.

The bill provided that the supreme authority in insurance should be exercised by two different bodies, one of which should engage in the general administration of insurance, while the other would be of a purely legal character and would settle all disputes. The technical committee opposes this scheme because it would entail unjustified delay and expenditure. The report therefore recommends the establishment of a single executive, administrative and judicial organ with the right of appeal to the ordinary courts. This Board, in the view of the Committee, should consist of three persons; a barrister as chairman and a workers' delegate and an employers' delegate, each of whom should be nominated by the organizations of the parties concerned.

The Committee also considered the comparative costs of carrying out insurance by private companies and by the mutual system. It concludes that the expenditure of the State would be substantially the same under either system, but that the costs to be borne by the employers would be greater under the system of private insurance than under the mutual system. Consequently, the return per unit of contribution would be better under the second system, and for this reason the technical committee declares itself definitely in favour of the system of a state mutual fund as provided by the bill.

### **Relation of industrial safety to production**

One of the recent "Studies in Industrial Relations", published by the International Labour Office (Geneva) describes the staff organization in a few of the outstanding industrial concerns in Europe. These include the Zeiss Works (Germany) (LABOUR GAZETTE, November, 1931, page 1199); the F.I.A.T. Works

(Italy); the Philips Works (Holland), and the Sandvite Steel Works (Sweden). The bulletin describes the elaborate plans, including the works councils, with employee representation, vocational courses, and social institutions, that are followed by these firms to insure the orderly working of their respective industries.

In 1891 the firm of Philips began to manufacture electrical apparatus in a village in Holland, and by 1929 the staff numbered about 20,000, the products being now known throughout the world. In regard to accident prevention it is stated that the management of the Philips works considers that the responsibility for safety is inseparable from that for production and should therefore be left in the hands of the heads of departments. "Every accident however small, in fact, entails a stoppage of production. In an undertaking where work is organized on a more or less individual basis it may mean that only one man or one machine is put out of action; but in an undertaking where work is organized in large units it may paralyse a whole workshop. Under these conditions the cost of an accident can no longer be reckoned in terms of the compensation paid to the worker. In 1929, 175,000 gulden were paid in accident compensation under the Act on compensation for industrial accidents; but the management estimates the real loss incurred by the undertaking through accidents at several times that sum. Accidents have, moreover, a second unfavourable effect on production, since frequent accidents may make the worker nervous and affect the rhythm of his work. All these reasons have convinced the management that safety is closely related to production, and that—as much as order and discipline and the other factors conducing to the regularity of work—it is one of the elements in the process of rationalization which it is the duty of the heads of departments to carry out... "The management has sometimes contemplated the setting up of safety committees, but has not yet put the idea into effect. It recognizes the potential educative and even preventive value of such committees, but hesitates to take any step that would reduce the sense of responsibility of heads of departments. Moreover, it considers that the present system works in a satisfactory manner and therefore prefers to maintain it.

#### **Benefits of community health services**

The remarkable results obtained by the co-ordinated efforts of health agencies in the United States and Canada were outlined in a recent address by Dr. Louis I. Dublin, the vice-president in charge of the Industrial Health Relations Department of the Metropolitan Life

Insurance Company. "The year that has just closed and the first quarter of the new year," he said, "have in many ways held out extraordinary surprises. Our people have been going through a difficult time. Millions of families have had to live on reduced incomes; millions of others have not known where the next day's bread was coming from. As you know, in every centre of population, relief agencies have taken care of the emergent needs of the people. In the midst of this acute situation, we have experienced next to the lowest death-rate in the history of the country.

"I do not wish at this moment to analyse in much detail the factors which have produced this favourable health situation, but I am convinced that one of the most important is that the people of the United States and of Canada have, over the last twenty-five years, built up and supported active and efficient health departments and associated private health agencies."

Dr. Dublin referred to the considerable share of the Metropolitan Company in the organization and direction of the social efforts that have led to these results. Referring to the mortality experience of the company's industrial policy holders, he stated that the deathrate had fallen from 12.53 per thousand in 1911 to 8.46 in 1931. "The reduction in the deathrate from tuberculosis has been the chief item in the company's accomplishment. Today, the deathrate from this disease is practically one-third what it was twenty-two years ago. What was then the first of the causes of death has now been reduced to fifth place. It should be a gratifying experience for all of us to have had part in a campaign which has meant so much to the people of the two countries. In like manner, typhoid fever has been reduced 89.5 per cent, since 1911; diphtheria, 84.3 per cent; scarlet fever, 75.6 per cent; pneumonia, 46.1 per cent; diarrhoea and enteritis, 78.9 per cent; and deaths from maternal causes, 39.9 per cent."

#### **Hours of work in British coal mines**

At the instance of the Government, the British House of Commons has passed through all its stages a Bill providing for the maintenance of the 7½-hour day in coal mines "until the coming into operation of an Act to enable effect to be given to the Draft International Convention limiting the hours of work underground in coal mines adopted by the General Conference of the International Labour Organization of the League of Nations on June 18, 1931."

The Coal Mines Act of 1931, which provided *inter alia* for the 7½-hour day, expired on July

7, 1932, and unless new legislation had been passed the working day would then automatically have become one of 7 hours.

Mr. Runciman, President of the Board of Trade, in commending the bill to Parliament, contended that a drop from 7½ hours to 7 hours in the present circumstances of the industry would be disastrous. At the same time, he gave a clear pledge that, immediately the Convention of 1931 is ratified by the seven principal coal-producing countries concerned, Great Britain would be a party to it and the 7½-hour day would at once be reduced to 7½ hours. There had been a certain delay in obtaining ratification, but that was not the fault of the British Government, at whose request the International Labour Office had been doing what it could to secure ratification by the other countries in question.

The Bill was opposed by the Labour Party, who expressed regret at the failure to ratify the Convention and complained that the Bill did not provide for the continuation of the safeguards relating to wages which were contained in the expiring Act. The Government announced that they had received a guarantee from the mine-owners that wages would be maintained at their present level for the next twelve months, and that this guarantee would be enforced against the owners if necessary. The Labour Party, however, held that it was inequitable to extend the 7½-hour day indefinitely by law while wages were guaranteed only for a year and not by law. Their motion for the rejection of the Bill for this and other reasons was defeated by a large majority.

In recognition of his services in formulating the "Swope plan," Mr. Gerald Swope, President of the General Electric Company, recently received the medal of the National Institute of Social Sciences (United States). Reference to the Swope plan was made in the *LABOUR GAZETTE*, May, 1932, page 516; and October, 1931, page 1054.

The Department of Industries and Commerce of New Zealand reports that the number of registered unemployed showed a substantial reduction during the first quarter of 1932, as compared with the peak figure registered during 1931—namely 51,408 on October 5. On March 21, the number of unfilled applications was 44,912. Continuous efforts are being made by the Government to find profitable avenues for the absorption of many of those persons now out of work, and further schemes are now being put into operation for this purpose.

The 64th annual congress of delegates from co-operative societies in the United Kingdom, was held at Glasgow during May, when it was decided to set up "a new authority for the co-operative movement to which shall be delegates the decision of all matters of national policy." This new body, which is to be called "The National Co-operative Authority" will consist of representatives of the Co-operative Union, the Wholesale Societies, and other national bodies.

Restrictive provisions as to labour and wages in municipal contracts for the construction of sewers in Salt Lake City, for the purpose of relieving unemployment, which increased the cost without enhancing the value, were held to be void by the Utah Supreme Court as an unlawful diversion of funds and against the public policy of the State. It was estimated that the improvement would cost about \$600,000, but the cost of the proposed improvement would be increased to the extent of \$55,000 by reason of insertion of the provisions calling for hand labour and for rotation of labour.

Under the German Workmen's Compensation legislation no compensation is paid during the first twenty-six weeks of sickness, during which period the sickness insurance law entitles the workers to sick pay, and medical and surgical treatment. After that period, if the disease has been scheduled, compensation is paid. The method of scheduling diseases is similar to that followed under the British Workmen's Compensation Act; but in Great Britain compensation is paid from the commencement of the illness, the claimant not being eligible for benefits under the National Health Insurance.

More than 76,000 needy old people in the United States were being cared for by public pensions at the end of 1931. This was disclosed by a survey just made by the Bureau of Labour Statistics (Washington). While 17 States had pension laws on their statute books at the end of 1931, the law had not been put into actual operation in two of these. About two-fifths of the counties in the other 15 States had adopted the system, and these spent more than \$16,000,000 for the support of their needy aged in 1931. In 4 of the States the system is practically state-wide, while in the remaining 11 States the protection afforded by the law ranges from less than 1 per cent of the State population (in Kentucky) to 80 per cent (in Montana). As would be expected, the spread of the system has been much greater in the States with "mandatory" than in those with "voluntary" systems.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of June was reported by local superintendents of the Employment Service of Canada to be as follows:

A few requests for farm hands were received at the Employment Offices in Nova Scotia and the prospects were good for root, grain, hay and apple crops. Fishing had slackened somewhat, salmon being not quite so plentiful. Bank and shore fishermen, however, reported fair catches. There were no new developments in logging. Mines in the New Glasgow district operated from one to four days, except for one mine which was entirely idle, while those in Cape Breton and vicinity ranged from two to five days per week. Increased business was noted by bakers and confectioners, but foundries and machine shops were only fairly busy, and idleness still prevailed in some sections of the iron and steel group. Extensive street and sewer improvement was being carried on at Halifax, although building activity in this city was slow. At New Glasgow, considerable building construction was in progress and work on highways was also available. Freight transportation was light, but passenger traffic, due to the tourist season, was greater. Trade was slow, with collections poor. There was a continued demand for women domestics and numerous placements were made.

There was little demand for farm help in the Province of New Brunswick, although the outlook for growing crops was favourable and city markets well stocked with farm produce. Fishing was fair. A few men were supplied for pulp cutting at Saint John, but for the most part, there was no activity to report in logging. Canning plants were busily preparing for the strawberry season, but manufacturing industries, in general, reported business as fair only. Lumber mills, however, were busy cutting long lumber mostly for British markets, and sash and door factories were running, but had few orders for export shipments. Some building and highway construction was underway, although not in any great volume. Passenger and freight traffic was good. Trade was fair. Placements were made in the women's domestic section but no notable changes were recorded.

The farming situation in the Province of Quebec showed little variation, placements in that industry being general. Quietness prevailed in logging, although many men found employment fighting forest fires. No orders were received for miners, but at Rouyn, prospects indicated more activity this year than

last. Manufacturing establishments in Hull and Three Rivers were operating with reduced staffs, while in Montreal and Quebec City, manufacturing conditions also were dull, Sherbrooke being the only city to report matters as satisfactory in that line. Building construction throughout the province had made no material progress and in some centres, orders in building trades showed a decline from those of the previous month, Sherbrooke alone stating that considerable activity had been in evidence there during June. Transportation was quiet, but trade showed some improvement, due to the tourist season. A decrease was noted in placements in the women's domestic group, as city people were leaving town for vacation points.

The call for farm help in the Province of Ontario continued good, as a large crop of strawberries in Brantford and Norfolk Counties provided considerable employment for men and women in those districts. Pulp cutting operations were going on in North Bay, Fort William and Port Arthur zones, but otherwise the industry was quiet. Miners in large numbers were still seeking work in Sudbury and Timmins areas, with a few men being taken on at the larger mines. Hamilton reported improved conditions in several different lines with old hands recalled. Canning factories there and also in Brantford had started operations and were busy. Pulp and paper mills were working mostly on part-time or on restricted production, but steel mills had practically ceased operations for the time being. In nearly all centres industrial concerns were quiet, with little improvement yet in evidence. Alterations, repairs, small jobs and relief work were about the only projects at hand in building construction. Of these, the relief camps on the trans-Canada highway were employing some hundreds of men in the North Bay area. Vacancies in the women's domestic section, particularly at Toronto, had decreased considerably, but the number of applicants remained high.

With favourable weather, crop growth in the Province of Manitoba continued rapidly. Grasshoppers, which had been a serious menace to the farmers this year had been held in check in most localities by poison bait or drenching rains, but were still an important issue at many points. Haying had started in some districts and the demand for farm help continued to improve. There was nothing to report in logging and mining, and manufacturing was quiet. Building permits at Winnipeg had passed the million and a half mark, but those recently issued were mostly for repairs and alterations, many mechanics and labourers being placed on

**MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA**

relief work. Retail trade was fairly good, but no improvement in volume was noted by wholesalers. Very little change appeared in the women's domestic section. Slightly fewer orders were received for day workers, but the demand for domestics remained steady.

Requests for farm help in the Province of Saskatchewan showed little change, the slight increase in orders reported by some offices being due to men sent out under the summer farm relief scheme, which had helped the situation considerably in some districts. There was little demand for tradesmen and building labourers, and relief works in many instances still provided the chief source of employment. Railway construction showed some improvement, a large gang of men being taken on at Medstead and a few others at Moose Jaw. All orders for city housekeepers and women domestics were easily filled, but there was still a call for farm housekeepers, for which applicants were difficult to obtain.

Vacancies and placements in the farming industry in Alberta were slightly in excess of the previous period and crop conditions were reported to be ideal, with sufficient moisture for some time throughout the province. Many sheep shearers had been placed during the month, but this line of work was about over. Government wood-cutting camps absorbed some men as replacements. Little activity was noted in mining, although some of the mines were doing the usual summer overhaul. This, however, did not call for increased workers. Manufacturing was quiet. Building construction in Edmonton continued fair, with some of the larger undertakings nearing completion and nothing new in sight. Elsewhere, quietness in this line also prevailed, but the parks and highways provided employment for a few men. Trade, both wholesale and retail, was dull. The women's domestic section reported few registrations during the month, with sufficient help to meet all demands.

Few farm orders were listed at the Employment Offices in the Province of British Columbia, as growers were being personally canvassed by the unemployed. Cherry picking had commenced, thus fruit packing plants had started operations and in these a number of local workers had found employment. The sock-eye fishing season was open along the Naas and Skeena Rivers, but no catches had been brought in, as the price offered by the cannery men was not acceptable to the fishermen. Conditions in logging were most unsatisfactory; an additional number of saw-mills had been closed down and others planing only on orders from larger plants. Mining was quiet, although prospecting for placer gold continued active throughout the Northern

interior, with small quantities of gold being recovered from time to time. Coal mines were also inactive. Slackness still prevailed in the manufacturing industries. Other than relief work on highway and in Government camps and few private dwellings in course of erection, little work was available in the construction line, nor, except at Prince George, were orders received for railway gangs, as crews had been greatly reduced on all roads. At Vancouver, waterfront workers were experiencing one of the quietest seasons on record, but at Prince Rupert, conditions in this group were fairly good. Trade was slow. There was a slight improvement noted in the women's domestic section, but there still remained a large number of women seeking employment.

#### EMPLOYERS' REPORTS

The Dominion Bureau of Statistics tabulated returns on employment from 7,970 firms with 816,124 employees on June 1, as compared with 801,451 on May 1. This increase of 1.8 per cent brought the index to 89.1, as compared with 87.5 in the preceding month and 103.6 on the same date last year. On June 1, in the ten preceding years, the index was as follows:—1930, 116.5; 1929, 122.2; 1928, 113.8; 1927, 107.2; 1926, 102.2; 1925, 95.6; 1924, 96.4; 1923, 98.5; 1922, 90.3 and 1921, 87.7.

Expansion was noted in all of the five economic areas, the increase being greatest in the Maritime Provinces and Quebec. In the Maritime Provinces, manufacturing, logging, mining, and construction registered heightened activity, while transportation was seasonally slacker, and iron and steel plants also released employees. In Quebec, construction and transportation recorded important increases in personnel, and there were also gains in the logging, service and trade groups, while manufacturing as a whole was slacker. In Ontario, construction, logging, mining and transportation registered the greatest expansion, but manufacturing and services showed contractions; in manufacturing, increases in the lumber, vegetable food and pulp and paper groups were offset by losses in iron and steel, textile and electrical apparatus factories. In the Prairie Provinces, construction (especially railroad construction), transportation, services and manufacturing reported improvement, but logging, coal mining and retail trade released employees. In British Columbia, construction and transportation recorded advances; within the manufacturing group, increases in food, lumber and pulp and paper were largely offset by declines in non-ferrous metal works, so that the group as a whole showed very little change. Mining and trade released employees.

The trend of employment was favourable in four of the eight cities for which separate tabulations are made: Montreal, Quebec, Windsor and the adjoining Border Cities and Vancouver showed considerable gains, but declines were noted in Toronto, Ottawa, Hamilton and Winnipeg. In Montreal, transportation and trade reported the greatest increases, but manufacturing was slackier, and there were also losses in construction. In Quebec, the gains took place chiefly in construction and trade. In Toronto, manufacturing, construction and trade released employees. In Ottawa, construction recorded lowered activity, while manufacturing was rather busier. In Hamilton, most of the decrease took place in manufacturing, notably in textile and iron and steel plants, but construction was more active. In Windsor and the adjacent Border Cities, increased activity was registered by automobile factories, while other industries showed only slight changes. In Winnipeg, most of the reduction was recorded in trade and construction, but manufacturing and transportation were rather busier. Manufacturing and shipping reported minor gains in Vancouver.

An analysis of the returns by industries shows an advance in manufacturing; there were increases in the lumber, pulp and paper, fish-preserving, vegetable food, building material, automobile, electric current and mineral product industries, but the iron and steel, non-ferrous metal, electrical apparatus, textile and clothing, tobacco and some other groups showed curtailment. Logging, services, wholesale trade, transportation, construction and maintenance registered improvement, that in the last-named group being most noteworthy. On the other hand, retail trade and coal mining were seasonally slackier.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1932.

**TRADE UNION REPORTS** Little variation from the preceding month in the volume of activity available to local trade union members was indicated at the close of May, according to the reports received from 1,800 labour organizations including a membership of 175,411 persons. Of these, 38,692, or a percentage of 22.1, were without employment on the last day of the month, in contrast with 23.0 per cent in April. The general employment trend throughout the majority of trades and industries was favourable, all provinces with the exception of Alberta showing some recovery, chiefly seasonal in character. The improvement recorded however was not out-

standing in any one province, while in Alberta fractional recessions occurred. Every province reflected less active conditions than in May last year, when unemployment, for Canada as a whole, stood at 16.2 per cent. In this comparison Ontario and Manitoba unions reported the most substantial drop in the volume of work afforded, and in Quebec and British Columbia also, employment was largely restricted, while the curtailment of activity recorded in the remaining provinces was on a smaller scale.

A review in greater detail with tabular statements on unemployment among local trade unions at the close of May, 1932, appears elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS** During the month of May, 1932, the offices of the Employment Service of Canada made 32,869 references of persons to employment, and effected a total of 31,039 placements. Of these, the placements in regular employment were 12,510, of which 8,858 were of men and 3,652 of women. Placements in casual work numbered 18,529. Employers notified the Service of 32,209 opportunities for employment, 23,959 being for men and 8,250 for women. Applicants for work totalled 54,745, of which 42,408 were men and 12,337 were women. Losses were recorded in the total business transacted when a comparison was made with the preceding month, but in comparison with May last year, while there was a nominal decline in vacancies, applications and placements showed gains, the records for April, 1932, showing 34,961 vacancies offered, 57,830 applications made, and 33,744 placements effected, while in May, 1931, there were recorded 32,280 vacancies, 53,350 applications for work, and 30,728 placements in regular and casual employment. A report in detail of the work of the offices for the month of May, 1932, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada, during May, 1932, was \$5,289,506, as compared with \$4,237,160 in the preceding month and with \$12,115,291 in May, 1931.

The *MacLean Building Review* states that for June, 1932, the estimated value of new construction prospects in Canada totalled \$12,154,700. Of this amount \$7,521,400 worth related to new buildings and additions. The contracts for buildings ran ahead of the totals

for either February, March or April. Engineering led the other groups for June, having 38.1 per cent of all contracts, valued at \$4,633,300. Business building took care of 33.3 per cent, or \$4,043,000. Residential accounted for 25.3, or \$3,065,000, while Industrial had 3.3 per cent, or \$402,400. In Ontario, during June, awards were made to the value of \$4,321,300, which was 35.6 per cent of the value for all Canada. Quebec had 34.3 per cent, valued at \$4,168,000. The Prairie Provinces share to the extent of \$1,859,100, which was 15.3 per cent while the Maritimes had \$1,332,800 worth, or 10.9 per cent, and British Columbia 3.9 per cent, or \$473,500.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 748.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics states that the business operations were uneven in May, a bright feature being the resumption of the importation of raw materials in large volume. Raw cotton was imported to the amount of 12,463,000 pounds compared with 6,230,000 pounds in April. As the normal gain for the season is slight special significance attaches to the sharp gain in a factor of barometric importance in determining the trend of operations in the cotton textile industry. Imports of raw wool and wool yarn, mainly used in the manufacture of woollen cloth, also showed a strong tendency toward revival. The receipt from external countries was 1,096,000 pounds compared with 347,000 in April, the gain being almost the same after the elimination of the seasonal factor. Not only was a marked gain shown in May over the preceding month, but imports of raw material were much greater than in the same month of 1931.

The heavy volume of imports of crude petroleum in May is suggestive of the favourable level of operations in the oil industry. Receipts from external sources were 109,518,000 gallons compared with 38,565,000 in April, a gain of 78.5 per cent after seasonal adjustment. Imports in May, 1931, were 107,209,000 gallons. The purchase of raw materials is an excellent barometer of the intentions of the manufactures in regard to future operations, and the greater imports of the raw cotton, wool and petroleum indicate that preparations are being made in the textile and oil industries for a higher level of activity.

The automobile industry was one of a group of industries which showed a gain in output over the preceding month, but were still

operating at a modest level. Production was 8,221 units in May compared with 6,810 in April, a gain of 18 per cent after seasonal adjustment. New business obtained by the construction industry was at a higher level in May than in the preceding month even after seasonal adjustment. The gain in construction contract awards, after adjustment for price changes and seasonal tendencies, was 13 per cent, while building permits showed a gain of 16 per cent. Comparison with May, 1931, however, emphasizes the low level of operations in the construction industry during the season.

The manufacture of sugar was 58,751,000 pounds in May compared with 35,879,000 pounds in April. Flour milling was less active in the last month for which statistics are available. The gain in inspected slaughterings of hogs after seasonal adjustment was more than 12 per cent, 254,836 head being slaughtered compared with 229,124 head in April. Cattle and sheep slaughterings after adjustment for seasonal tendencies, were less in May than in April.

The lumber and newsprint industries operated at depressed levels in May. The exports of planks and boards at 62,968,000 feet showed a decline after seasonal adjustment from the preceding month. The output of newsprint was 175,887 tons compared with 176,660 in April, the decline after seasonal adjustment being 3.2 per cent.

The primary iron and steel industry was less active than in April. Production of pig iron was 13,339 long tons compared with 16,898 while the output of steel ingots was 29,239 tons compared with 36,030 in the preceding month. The receipt of a considerable rail order from the Canadian National railways will mean a gain in operations at Sydney.

The index of manufacturing production was 144.2 compared with 118.0 in April, the gain in the imports of raw material being the main influence in raising the index.

While gold shipments were in excess of \$5,000,000, the total did not reach the level of the preceding month. Shipments of silver were 1,429,000 ounces compared with 972,000 ounces in April. Base metal shipments showed a decline in May after seasonal adjustment. Exports of the better grades of asbestos, were 3,608 tons compared with 2,258. Production of coal was 672,441 tons, the decline from April, after seasonal adjustment, being about 8 per cent.

The net result was that the index of mineral production was 141.5 compared with 153.0 in April, silver and asbestos being the only factors out of the seven recording an advance.

The gain in car loadings was less than normal for the season, the freight movement

being 182,728 cars compared with 180,177. Export of wheat was 15,543,000 bushels, compared with 7,513,000 in April, but the level was greatly below that of the same month of 1931.

**Coal.**—The Canadian production of coal during May amounted to 672,441 tons, a decrease of 44.1 per cent from the average for the month during the past five years of 1,202,348 tons. Bituminous coal output in May totalled 573,147 tons, sub-bituminous coal 29,515 tons, and lignite coal, 69,779 tons. Nova Scotia mines produced 314,317 tons as compared with 469,827 tons in May, 1931. Alberta's output during May was 194,247 tons or 29.8 per cent below the total for the corresponding month of 1931. This decline was due mainly to strikes in the Crowsnest bituminous field, involving 1,255 men with a loss in working time during May of 29,505 man-days. In this field, two strikes, one at Blairmore and the other at Bellevue, commenced on the 23rd and 24th of February respectively, and are still in progress. Strikes also occurred at two mines at Coleman, commencing about March 18 and terminating on May 26. British Columbia's production of 130,821 tons was only slightly below the May, 1931, output. A 43.2 per cent increase was shown in the tonnage of coal mined in New Brunswick; the month's output was 16,600 tons as against 11,590 tons a year ago. Saskatchewan mines produced 16,456 tons, a 26.1 per cent falling-off from the total for the corresponding month of 1931.

Coal importations into Canada totalled 1,039,887 tons in May, a decline of 27.5 per cent from the May, 1927-1931, average of 1,433,349 tons. Receipts of anthracite coal in May were recorded at 321,769 tons, consisting of 170,967 tons from Great Britain, and 150,802 tons from the United States. Bituminous coal imports were made up of 664,478 tons from the United States and 53,605 tons from Great Britain. Imports of lignite coal in May amounted to 35 tons. Exports of Canadian coal declined 65.8 per cent to 18,269 tons as compared with the five year average for May of 53,425 tons.

Coal made available for consumption in Canada totalled 1,694,059 tons, or 34.4 per cent below the 1927-1931 average for the month of 2,582,272 tons. The month's supply was drawn from the following sources: the United States, 48.1 per cent; Canadian mines, 38.6 per cent; and Great Britain, 13.3 per cent.

A summary of Canadian trade in May, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$44,361,312, as com-

pared with \$29,794,296 in the preceding month and with \$73,457,404 in May, 1931. The chief imports in May, 1932, were: Iron and its products, \$7,169,183; non-metallic minerals and products, \$9,476,026; Agricultural and vegetable products, mainly foods, \$6,911,330.

The merchandise exported from Canada during May, 1932, amounted to \$40,594,404 as compared with \$26,975,756 in the preceding month and with \$59,833,245 in May, 1931. The chief exports in May, 1932, were: Agricultural and vegetable products, mainly foods, \$14,754,558; Wood, wood products and paper, \$11,223,365; Non-ferrous metals and their products, \$4,077,958.

### Strikes and Lockouts

The time loss due to industrial disputes showed a substantial increase over that recorded for the previous month, a corresponding increase having appeared in the number of disputes recorded, and the number of workers involved was almost twice as great, due largely to the occurrence during the month of a dispute involving some 1,300 fishermen operating on certain rivers in British Columbia. In comparison with the figures for June, 1931, while a larger number of disputes was recorded for June this year, the number of workers involved and the time loss incurred were greater still, being over twice that recorded for the same month last year. There were in existence during the month seventeen disputes, involving 3,011 workers, and resulting in a time loss of 38,147 working days, as compared with thirteen disputes, involving 1,521 workers, and resulting in a time loss of 31,905 working days during May, 1932. In June, 1931, there were on record fourteen disputes, involving 1,068 workers, resulting in a time loss of 17,724 working days. At the end of the month there were on record eleven disputes involving approximately 2,300 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$6.79 for June, as compared with \$6.90 for May; \$8.16 for June, 1931; \$11.10 for June, 1930; \$10.92 for June, 1929; \$10.18 for June, 1922; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. The decrease was due to lower prices for milk, butter, cheese, bread, mutton, pork, bacon, lard and potatoes. Including the cost of fuel and rent with that of foods the total budget

averaged \$16.20 at the beginning of June as compared with \$16.45 for May; \$18.36 for June, 1931; \$21.44 for June, 1930; \$21.18 for June, 1929; \$20.58 for June, 1922; \$26.92 for July, 1920 (the peak); and \$14.27 for June, 1914. Fuel averaged slightly lower, due to declines in the prices of anthracite coal and of wood in some localities. Decreases in rent occurred in several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 continued to decline, being 66.6 for June, as compared with 67.7 for May; 71.9 for June, 1931; 87.7 for June, 1930; 93.4 for June, 1929; 164.3 for May, 1920 (the peak); and 64.4 for June, 1914. In the classification according to chief component materials six of the eight main groups were lower and two were higher. The Iron and its Products group and the Non-Metallic Minerals and their Products group advanced slightly, the former due to higher

prices for rolling mill products and hardware, and the latter due mainly to higher prices for plaster and sulphur. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for grains, flour and vegetable oils; the Animals and their Products group, because of decreases in the prices of calves, lambs, leather, salmon, cured meats and butter, which more than offset higher prices for eggs, steers and hogs; the Fibres, Textiles and Textile Products group, due to lower prices for raw jute, raw cotton and raw wool; the Wood, Wood Products and Paper group, owing to declines in certain lines of lumber; the Non-Ferrous Metals and their Products group, because of declines in the prices of copper, lead, zinc and tin; and the Chemicals and Allied Products group, due to decreases in the prices of paint materials, tanning and dyeing materials and certain drugs, which more than offset higher prices for certain organic chemicals.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

TWO applications under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour on July 2 from the Niagara, St. Catharines and Toronto Railway in connection with a dispute arising as a result of a

10 per cent wage reduction proposed by the company, the employees concerned in the one case being 61 passenger car operators, and in the other case, 29 shop employees. The applications were before the Department for consideration at the time of going to press.

## Report of Board in Dispute Between the Various Coal Operators in the Drumheller District and Employees, Members of District 18, United Mine Workers of America

The Board of Conciliation and Investigation established in April to deal with a dispute between various coal operators in the Drumheller district and certain of their employees being members of District 18, United Mine Workers of America, reported to the Minister of Labour early in July. The dispute arose in connection with negotiations looking to a new working agreement, approximately 1,400 employees being directly affected. The personnel of the board was as follows:—Mr. A. MacLeod Sinclair, K.C., of Calgary, Alberta, chairman, appointed on the joint recommendation of the other board members, Messrs. W. C. Robertson, K.C., and A. J. Morrison, both of Calgary, nominees of the operators and employees, respectively. The report was signed by the chairman and Mr. Morrison. Mr. Robertson submitted a minority report. The text of these reports follows.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act, and in the matter of a dispute between Alberta Block Coal Co., Newcastle Coal Co. Ltd., Thomas Coal Co. Ltd., Western Gem Coal Co. Ltd., Midland Coal Mining Co. Ltd., Rosedale Coal Co. Ltd., Star Coal Mines Ltd., and Jewel Collieries, Ltd., hereinafter called the Employers, and District No. 18, United Mine Workers of America, hereinafter called the Employees.*

The Board held meetings in Calgary and in the Drumheller District. The meetings in Calgary dealt with organization, and subsequently heard arguments on behalf of both parties to the dispute.

At the meetings in Drumheller evidence was adduced on behalf of both parties. The Board inspected the underground workings of two

mines, Western Gem Coal Co. Ltd., and Jewel Collieries, Limited; and they also inspected the surface conditions of the mines operated by all parties to the dispute, paying particular attention to the screens.

I have been fortunate in having as my colleagues on this Board Mr. W. C. Robertson, K.C., who has had actual experience as an operator, and Mr. Angus J. Morrison, who has had experience as a practical miner, and a union official.

The case for each party was prepared and presented with meticulous care, which leads me to the conclusion that if any matter relevant to the issues involved has not been proven, it was not due to any oversight.

At the opening of the enquiry, the Board made it clear that the parties were not to be controlled by the strict rules of evidence, but that the Board would admit and call for such evidence as in equity and good conscience it might think fit, whether strictly legal evidence or not, and the investigation was conducted on this basis.

So far as I can gather from the application for the establishment of the Board and the evidence adduced, the items in dispute appear to be as follows:—

*The Employees Claim:*

1. That the Agreement be made for a period not exceeding 2 years.
2. That all Contract rates be increased 10 per cent over present rates.
3. That day wage rates be increased as follows: Boys up to 18 years of age—outside—to \$3.50. Boys up to 18 years of age—inside—to \$5. All other day wages by 10 per cent.
4. The minimum wage be increased to \$6.13.
5. That all coal be paid for on a run-of-mine basis, at the rate of 2,000 pounds to a ton.
6. Seniority rights.
7. Six-hour day.

*The Operators Claim:*

1. Reduction of \$1 per day from the present Day Wage rates.
2. Reduction of 20 per cent from all Contract rates.
3. Amendment of existing clauses as to,
  - (a) Timber rates.
  - (b) Bone clause.

No evidence was adduced which could support the claims of the employees, except as to the condition of the screens, seniority rights and duration of Agreement, to which I shall advert later. In my opinion all the other claims of the employees should be dismissed.

I cannot agree with the claims of the employers for the reduction of \$1 per day on the present Day Wage rates. Neither can I agree

to the claim for a reduction of 20 per cent on all Contract rates. I think that the Timber Rates and the Bone clause should remain as they are at present.

Much was said during the hearing as to the value to the industry generally, and consequently to the employees of a general reduction in the scale of wages, but, although I pressed the representatives of the employers for some concrete evidence as to increased production resulting from reduction of wages, none was provided. The whole claim on this point was based on hope and conjecture. It is true that an effort was made on behalf of the employers to show that, if wages were reduced, increased production followed.

I have not been able to satisfy myself that the question of production during the period under review was controlled to any extent by reduction of wages, because so many extraneous circumstances intervened that it is impossible to say what the cause thereof was.

I shall now deal with the two points in the employees' claims which I consider to be worthy of consideration. These are the question of screens and seniority rights.

I do not think that the claim of the employees to be paid on a run-of-mine basis is well founded, but I do think if a screened coal basis is to obtain there should be uniformity. The result of our inspection was that all the screens examined were in good condition, except that at the Thomas Coal Mine, which, in my opinion, is much too long and imperfectly constructed. I have no doubt that the coal contained in Exhibit 83 would not have gone through a properly constructed screen. In my opinion, screens in the district involved in this dispute should be uniform. I do not think, however, that the employers should be asked at this stage to jettison the existing screens and substitute new ones. To my mind the fair thing to do would be to allow the existing screens to continue, subject to the following:—

In the case of mines which have 1½" screens, the screens should be 12' long.

In the case of mines with 1¼" screens, the screens should be 16' long.

The only other question raised by the employees which should be considered is the one of seniority rights.

I have gathered from the evidence and argument that there is not much dispute on the principle of seniority, the only difficulty being in the application of the principle. That being so, my view is that seniority rights should exist, but that the basis upon which these rights should be placed should only begin from the 1st of October of this year. By that I mean

to say that when the crews are hired at the opening of the winter season, all seniority rights should be based upon the employment as from that date.

I shall now give my view as to the manner in which the dispute should be settled.

The general clauses of the Agreement which has just expired should be retained, except as hereinafter altered. The alterations I suggest are as follows:—

1. The minimum wage clause should read "\$5.40" instead of \$5.57.

2. The preference of employment clause should be deleted, and a provision inserted whereby a preference of employment should be given on a seniority basis, starting from the 1st of October, 1932.

3. The wage for "Miners taken to do Company work" should be \$5.40.

4. Contract rates should remain as they are in the expired Agreement, except that tonnage rates on entries in mines in which the coal is sheared, should be 90 cents a ton. This, however, does not apply to the Jewel Collieries, Limited, Mine, as to which I shall refer later.

5. The present differential rate of 4 cents per ton over the Drumheller rates, which exists in the Wayne Field, should be continued at the Jewel Mine until the 1st of April, 1933, when the matter should be discussed between the representatives of Jewel Collieries, Limited, and the representatives of the employees, with a view to an adjustment, having regard to the conditions of the seams then existing.

6. Where 1½" screens are used at present, the screens should be limited to 12' in length, and should have crossbars securely fastened, not more than 3' apart, without "ripples".

7. Where 1¼" screens are used at present, the same should be continued in the existing conditions, except that such screens should not be more than 16' in length.

8. All screens should have sufficient pitch to ensure the free running of the coal, to such a degree that the screens will clear themselves, making due allowance for climatic conditions.

9. I see no reason for changing the present Timber Rates, except that at the Star Mine the Timber Rates should be increased to conform to the rates paid at the Rosedale Mine, and the Tonnage Rate paid for pick men at the Star Mine should be reduced to conform to the rate paid by the Rosedale Mine.

10. The Day Wage Rates should be reduced and paid for on the same basis as the Day Wage Rates presently paid in the Crow's Nest Pass, namely, the Day Wage Rates presently being paid by the McGillivray Creek Coal and Coke Company, and The International Coal and Coke Company.

11. No change should be made in Boys' wages.

12. The wages of Machine men should not be changed, except that the Machine man and his helper should clean the place, placing all cuttings in the gob, thereby leaving the place clean and in condition for the miner to start his regular work.

13. There is a diversity of practice in regard to charging for lights. All Company men should be supplied with free lights, but Contract men should pay for the lights the sum of Five Cents per shift actually worked.

14. Any Agreement arrived at should be made for a period of three years from the 1st of April, 1932, subject to termination on the 31st of March, 1934, by either party giving sixty days' notice of cancellation.

All other rates and local conditions, except those hereinbefore referred to, shall be on the same basis as provided for in the Agreement which expired on April 1st, 1932.

(Sgd.) A. MACLEOD SINCLAIR,  
Chairman.

Approved and concurred in by:

(Sgd.) A. J. MORRISON,  
Employees' Representative.

### Minority Report

I have just had the privilege of perusing the report prepared by A. Macleod Sinclair, Esq., K.C., Chairman of the Board, concurred in by Mr. Angus J. Morrison, the third member of the Board, and regret exceedingly that I am unable to express my own concurrence therein.

As to the claims of the employees, set out in full by the Chairman in his report and which I need not repeat, I would agree with the Chairman if he had seen fit to dismiss them all. He has, however, given some special consideration to Claim I, that the Agreement be made for a period not exceeding two years, and Claim 6, seniority rights. The question of the duration of the Agreement I will deal with later, but the matter of seniority rights can conveniently be dealt with now. In the Drumheller Valley men move from mine to mine during the season, and to my mind it is impossible that any rule providing for seniority rights can possibly be worked out to the satisfaction of either party. It is plain from the evidence that up to the present every reasonable effort is made by the employers to place old employees, and the continuation of this practice is in my judgment as far as the employers can or should be expected to go. In addition it might be urged that a seniority rule would infringe

the general clause of the time-honoured Agreement reading so far as relevant as follows:—

*Management of Mine*

The right to hire and discharge, the management of the mine and the direction of the working forces are vested exclusively in the Company, and the United Mine Workers of America shall not abridge this right.

The Chairman next deals with screens, and would apparently prescribe not only the length but the pitch. The object of a screen is to take out all coal which will pass through the openings provided therein, and accordingly the screen should be of such a pitch and of such a length as to be efficient. The various mines have experimented and found the length and pitch which suit their product. All admit, however, that a screen should have a sufficient pitch to ensure the reasonable free running of the coal going over it, and the Chairman in his report makes this point, using the expression "making due allowance for climatic conditions." I am probably safe in saying that nine-tenths of the coal mined is produced in cold weather, and I am of opinion that the evidence which the Board heard establishes that in cold weather the screens have ample pitch for that purpose. If the pitch is made great enough so that coal will run freely in the summer months, in winter it will run so freely as not to screen properly and also to cause considerable breakage when the coal strikes the weigh pan. In my opinion, therefore, the screens should be left as they are, and this notwithstanding my feeling that if a uniformity of opening could be arrived at in the Drumheller Valley mines generally, it would be a decided improvement. It should be noted, however, that the Board on its inspection of certain screens, found that the screen at the Thomas mine at Nacmine was faulty and the bars should be anchored at suitable distances so as to prevent a springing apart and the passing through of coal, payment for which the miner is entitled.

Considerable evidence which was heard by the Board was directed to the substantiating of a claim made by the employers that the contract rates for room and entry coal respectively carried too great a differential. These rates as paid at the present time vary, and it may be useful to mention them, the rates in each case being, the first for room coal and the next for entry coal:—

Jewel—82 cents—\$1.03, a differential of 21 cents.

Nacmine—78 cents—94 cents, a differential of 16 cents.

Other mines to the dispute—78 cents—99 cents, a differential of 21 cents.

After giving my best consideration to the evidence which was produced by both sides, I find myself unable to agree with either the employers or the employees. It was shown incontrovertibly by the employers that contract men working in entries had higher average earnings than contract men working in rooms. The employees submitted various explanations for this, one of which is to my mind entitled to weight, namely, that there was an inclination on the part of the employers to pick the best men for entries. I am impressed by the force of this argument, and I think that the differential should not, as asked by at least some of the employers' witnesses, be eliminated entirely; and accordingly, subject to the general reduction which I intend later to recommend, I would suggest that the room rate be placed at 78 cents and the entry rate at 88 cents. In entries should be included all cross cuts not over 10 feet wide and all room necks. The above rates should be independent of whether or not the places are sheared. Where shearing is done, the miner at that place should contribute to the cost thereof at the now going rate of 50 cents per place. This would mean, as will be observed, a reduction in both rooms and entries from the rates paid in the Jewel Mine. In explanation of this reduction it should be stated that the Jewel was in 1928 forced, among other penalties, to pay a higher rate than the regular rate in Drumheller in order to get away from paying for run-of-mine coal which had hitherto been the basis in the Wayne mines. There would seem to be no justification or excuse for continuing this high rate in the Jewel Mine.

Another contentious subject was the matter of timbering. The rates for timbering in the mines parties to the dispute vary greatly, and unless one remembers the history of these rates and of the mines in which they are in force, it would be difficult to understand how this variation came about, and even then impossible to justify the difference. I will deal only with the prices paid for what are called "round sets" since these are most commonly used. The Midland, Rosedale, Alberta Block Coal Company, Newcastle and Jewel mines each pay for these sets at the rate of 93 cents per set. It is true that the Jewel Mine had at one time a rate which with the reductions from time to time put in force would now be 62 cents, but at the time it obtained a change from run-of-mine to screen coal basis, this timber rate was increased and now stands at 93 cents as above mentioned. The Star

Mine pays 46½ cents in rooms and 76½ cents in entries. As far as I can ascertain, evidence was not given as to the timbering rates in the Western Gem and Thomas mines. It was explained to the Board in evidence given before it that at the time Midland agreed to pay the higher timber rate above set out, this mine was taking out what is called the full seam, which entailed a length in excess of 8 feet for legs in the round sets. Subsequently this high rate was imposed on the other mines. Later Midland abandoned the lower bench, as it is called, of the full seam, and commenced taking out, as they do at the present time, only the upper bench, so that the length of the legs has been decreased to a length of from 4 to 6 feet in both rooms and entries. In the upper seam mines in the Drumheller Valley which were previously worked, the rate as shown in the evidence for round sets was 62 cents, and the same rate previously applied in the lower seam mines at Wayne. The employers contend that the timbers now being used in the lower seam mines—all the mines parties to this dispute are now working in the lower seam—are practically the same as those formerly used in the upper seam, and that the timbering rate for round sets should be reduced to that amount, namely, 62 cents. On the other hand, evidence was given by the employees to the effect that the timbers were considerably larger, at least one witness going so far as to state that one man could not put up a set of timbers unaided. After giving the evidence of both parties the consideration to which I think it is entitled, I conclude that there is little difference between the timbers used in the respective seams mentioned, and accordingly recommend that the rate for round sets be reduced to 62 cents, subject, however, to the reduction hereinafter to be recommended.

The Star Mine in respect of timbering rates should in my opinion be handled somewhat differently. In that mine there has been in existence for a long time a 46½c. rate for round sets and needles in rooms and 76½c. for round sets in entries and room necks. The room rate is admittedly a low one but it was balanced by a high pick mining rate, the exact amount of which was not, as I remember, given in evidence. In any event, while witnesses were called by the employees from this mine no objection was taken by them to either the timbering rates or the pick mining rate. It is not in evidence, but inquiry has convinced me that the timbers in this mine in both rooms and entries are not more than 4 feet high, so it would seem that the room rate is not so far out of the way even without taking

into account the rate for pick mining. To apply to the Star Mine the increase recommended in the majority report in respect of timbering would, I believe, greatly increase the cost of production and make operation of that mine still more difficult. I would accordingly leave the timber rates at the Star as they now are but would not apply to these rates the percentage reduction hereinafter referred to. On the other hand, if the management of that mine prefers, it should have the option, to be exercised promptly, to take the general rate of 62c. less the percentage reduction recommended to be enforced in other mines parties to the dispute.

### *Bone*

Bone in greater or less thickness occurs from time to time in all coal seams, and it seems to me from the evidence, that this bone is a hazard or inconvenience that a miner must, to a certain extent, accept. At the present time the miner encountering bone in the coal seam is paid therefor at the rate of 12½c. per inch per lineal yard. For this payment he is expected to either gob or load out in cars this bone without further remuneration. The fact is, however, and it was made amply clear by the evidence adduced before the Board, that much of this bone, after being paid for as above-mentioned in the seam, is loaded out by miners in the coal, passes over the screen, goes into the weigh pan and is paid for as coal on contract rates by the operator. It is then at the expense of the operator picked out of the coal as it passes over the picking table and put to waste. In the case of one mine particularly mentioned in evidence, it was estimated that of all the coal loaded out by the miners and paid for, 8% was made up of bone. In many domestic mines this situation has been partly met by providing that the miner should not be paid for bone in the seam except such as is in excess of 4 inches in thickness. The insertion of this clause in the Agreement has always been contended for by the employers and as strenuously opposed by the employees. In my opinion such a clause should be inserted in the Agreement and I so recommend.

### *General Reduction*

The employees asked that all contract rates be increased 10%. The employers asked that the same rates be reduced 20%. The employees asked that the day wage rates be increased to certain amounts in case of boys, and in case of other day wages, by 10%. The employers asked that the present day wage rates be reduced by \$1.00 per day. It should

be noted, however, that the operators abandoned any claim for reduction in boys' rates, and the majority award has refused to entertain the employees' claim for an increase on either contract or day rates. This same award recommends a reduction in the tonnage rate in entries in mines in which the coal is sheared to 90c. a ton, and with respect to day rates, reduces these to the rates presently being paid by the McGillivray Creek Coal and Coke Company and the International Coal and Coke Company Ltd. This would reduce the day rate of the company miner—a rate which has always been looked on as a basic rate—from \$5.57 as now paid, to \$5.40; a corresponding reduction is made in the minimum wage clause and in the clause covering the pay for miners taken to do company work, but the award stipulates that the wages of machine men, one of the highest paid classifications in the mine, should not be changed. The reduction so recommended is so small as to be of very little value to the mines involved.

The employers based their request for the reductions above mentioned on, among other, the following grounds:

(a) That the selling value of all commodities including coal had greatly decreased, and they pointed in particular to the present low value of wheat, the staple product of the prairie provinces.

(b) That the contract and datal rates now in effect had been made in the year 1925 and that since that time the cost of living had decreased almost, if not altogether, 20%, or, if the low rent paid in Drumheller is taken into consideration, more than 20%.

(c) That wages in trades and occupations generally have all suffered substantial reductions within the last few months.

(d) That by reason of the competition of other mines in which the wage scale was lower than in the mines parties to this dispute, the production of the latter mentioned mines had been much curtailed, due to inroads made on the limited market for coal produced in the prairie provinces by low cost coal coming from the above mentioned low wage scale mines.

(e) That the rates and wages presently payable in the Nova Scotia coal field under an Agreement made between the operators and United Mine Workers of America are considerably lower than the rates and wages asked for by the employers.

(f) That practically all the mines parties to the dispute have lost money during the season just ended, and, failing a reduction in the cost of producing coal, they will be ultimately faced with insolvency.

Considerable evidence, both *viva voce* and by way of exhibits, was tendered to the Board in support of all the above points. This evidence seems to have been almost, if not entirely, ignored in the majority award. In support of ground (d) the employers referred to mines in Edmonton, Camrose, Carbon, Dinant, Round Hill, and to the Souris or Estevan field in southeastern Saskatchewan, in all of which the datal and contract rates are much lower than those asked for by the employers. Under ground (f) the employers submitted to the Board confidential statements showing the result of operations for the 1931-1932 season and in some cases for the 1930-1931 season as well. Taking all these statements together, I do not see how anyone can doubt but that under present conditions the mines in question are living on their capital. That is a state of things which, to my mind, cannot be allowed to continue in the interest of either the employer or the employee. The object of this Board is surely to try and recommend a scheme of datal and contract rates by which the industry can be kept alive and the employees given such work as can be made available. If these mines are to continue eating into their capital or, perhaps more strictly speaking, the amounts which should be put by them to reserve for depreciation and depletion, it will only be a short time before there are no mines and therefore no work.

These statements were by arrangement made available to Mr. Livett, who represented the employees before the Board, and he was at liberty to submit them to a Chartered Accountant selected by him and then to cross examine the respective employers thereon. For some reason Mr. Livett did not exercise this right. It is, therefore, only fair to assume that the statements as submitted have given a true picture of the industry from a financial point of view.

The employers further represented to the Board that if the reduction asked for by them was granted, they could reduce the price of coal to the consumer and in the result not only hold the market they already have and which they feared they would otherwise further lose, but win back to a certain extent the market which had been taken from them by the low priced coals, and by so doing increase the number of days worked. In support of this they submitted statements from a number of mines of the earnings for the years 1924, 1926 and 1927 of all contract and company men who had been employed at the respective mines during all three of the years mentioned. The year 1925, it was stated, was omitted, since the first part of that year was under the high rates. These statements showed a decided increase in

earnings of these men in 1926 and 1927 over their earnings in 1924. The object of the statement was to convince the Board that when the 1925 reduction in datal and contract rates was put into effect, the earnings of the men went up, and that, notwithstanding the reduction in rate of wages, the lowered price of coal must have increased the market for the product of the mines in question, resulting in a greater production and therefore a greater number of days worked. Government reports verify the above claim of increased production. To put it shortly, the point sought to be made was that the employees, after taking the reduction, were better off financially than they had been when working under the higher rate. My colleagues who signed the majority award dismiss these statements with little more than a glance. It may be that the total increase shown was not due entirely to the lowered cost of production, and consequent lower cost to the consumer, but the facts are that a reduction in wages followed by a lower price of coal did result in increased earnings for the employees, and this, I am satisfied, was largely due, as the employers contend, to the increased market that they were able to command by reason of the lowered price of their product.

Evidence tendered to the Board also showed that the mines parties to the dispute have in the last couple of years suffered a very serious diminution of market and that they hoped, with a lowered price to meet present changed conditions, they could to a large extent regain the market which they had lost and were still losing. It is hardly fair to suggest, as the majority award does, that the employers were not able to give any concrete evidence as to increased production resulting from reduction of wages. The evidence was there and, at least to me, it is of considerable value.

From the foregoing I have come to the conclusion that the evidence submitted by the employers and to which I am prepared to give real weight, justifies the reductions of 20 per cent in contract rates and \$1.00 per day on datal rates asked for by them. The evidence of the employees in this connection was mainly directed to showing that their yearly earnings derived from work in the mines in question was not sufficient to provide them with a reasonable living for a year. This evidence appeared to be given on, to me, the mistaken assumption that an industry such as the domestic coal industry, which, when operating at the peak, provided approximately only 130 working days per year and which latterly provided considerably less, could be expected to provide for its employees such yearly earnings as would enable them to live comfortably for 365 days.

An exhibit filed by the employers showed that on a rough average 75 per cent of the coal produced by the mines in question was gotten out in the six months from September to February, inclusive, and 25 per cent in the six months from March to August, inclusive. I suspect that if this exhibit had been compiled so as to cover the seven months from September to March, inclusive, the percentage gotten out in these seven months would have been much higher than 75 per cent. It seems to me that employees of mines engaged in producing domestic coal must realize that their occupation is a seasonal one and that when they are asked to turn in their tools and are paid off in the month of March and informed that there will be no further work for them around the mine until about the middle of the following September, they must during those off months find other employment.

It may be advisable to mention that four mines submitted the average earnings of their various classes of employees per shift worked per month. These statements showed that all contract miners at these respective mines earned on an average respectively per shift worked the following sums, namely

\$9.13	\$7.69	\$6.66	\$6.31
--------	--------	--------	--------

so that from the standpoint of a day's pay for a day's work, these employees were not ill treated and, in view of the evidence submitted to the Board by both parties, could stand something of a reduction.

In my opinion, therefore, the contract rates should, subject to what has already been said in this report, be reduced by 15 per cent and that all datal wages other than those paid to boys should be reduced by 80 cents per day. I do not think that the employees should be asked to take the total reduction suggested by the employers. We are passing through a period of severe depression and for the present at least the industry should bear something of the burden, even though that should entail a diminution of capital.

May I here point out that the effect of the majority award is to leave the highly paid contract men with practically no diminution of earnings while at the same time to reduce to some extent the lower paid datal men. The result is to increase a disparity in the earnings of datal and contract men which is already, I think, great enough.

#### *Lights*

I agree with the majority award that all company men should be supplied with free lights, and that in mines where electric lights are used, contract men should pay for these

at the rate of 5 cents per shift actually worked. Where, however, open or carbide lights are used, I see no reason to change the present arrangement which is that the miner supplies his own lamp, which is a cheap, flimsy, easily damaged affair, and purchases from the mine, or any other source he chooses, his carbide.

#### *Duration of Agreement*

I do not think that under conditions as they are, any agreement should be made for a period longer than until the 31st of March, 1933. By that time conditions may have changed so that the recommendations which I am making, if carried into effect, might be very unfair to one or other party to the dispute. Perhaps the better arrangement would be to adopt with some change the recommendation of the majority award and to suggest,

as I do, that the agreement be made to terminate on the 31st day of March, 1934, but nevertheless subject to termination on the 31st day of March, 1933, by either party giving to the other 60 days' notice of cancellation.

All other rates and local conditions except those hereinbefore referred to should be continued on the same basis as provided for in the agreement which expired on the 31st day of March, 1932.

I desire to take this opportunity to express my appreciation of both the fairness and ability with which Mr. Gouge on behalf of the employers and Mr. Livett on behalf of the employees presented the evidence substantiating their respective cases.

Dated at Calgary, Alberta, this 30th day of June, 1932.

(Sgd.) W. C. ROBERTSON.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

**E**IGHT new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, April, 1932, page 393, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927 to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### **Case No. 381.—Canadian Pacific Railway (Western lines) and Brotherhood of Locomotive Engineers.**

This case, which concerned the claim of an engineer for wages for 30 minutes' work performed as hostler in 1930, was presented to the Board in August last year, when it was referred back to the parties for further negotiations. A satisfactory settlement was reached and the case was therefore closed.

#### **Case No. 390.—Canadian Pacific Railway (Western lines) and Brotherhood of Railroad Trainmen.**

A trainman, having finished his duties as trainman, was required to act as pilot on an engine running without a train, for a distance of 44 miles, and a dispute arose as to the proper payment for the latter duty. The employees contended that when a trainman is used as a conductor on an engine from the "tie-up" point to the terminal, he is in a new service, and should be paid under Article 1, clause (n) of the schedule, which reads:—

"Trainmen acting as pilots or trainmen acting as conductors on engines running light will receive conductor's pay at through freight rates and under through freight conditions."

The company contended that the principle involved was the same as was applied by the Board in Case No. 116 (*LABOUR GAZETTE*, November, 1923, page 1222). In this case it was decided that "pay to trainmen acting as pilots, or trainmen acting as conductors on engines running light, may be combined with other service to the same extent that pay for trainmen paid under through freight conditions may be combined with other service."

The Board found that the conditions, in principle, were the same in the present case as in Case No. 116.

#### **Case No. 391.—Canadian Pacific Railway (Western lines) and Brotherhood of Railroad Trainmen.**

The question of payment for "deadheading" (that is, travelling by train to take up

duties or return to the home terminal) arose in connection with a trainman who had to travel from his home terminal to take up duties on a new assignment. The employees contended that when trainmen are required to "deadhead" to a distant terminal in order to man a train which had been bulletined (as in the present case) to run out of their home terminal, payment should be made as for a "train operation" movement, as provided in Article 1, clause (t) of the schedule. On the other side, the company maintained that trainmen were not entitled to compensation when "deadheading" to the point where their duty begins, when, as in this case, they have exercised their preference for such duty.

The Board found that the trainman in question had bid for the duty he was required to perform, and to which he was assigned, and denied the claim of the employees.

**Case No. 392.—Canadian Pacific Railway (Western lines) and Brotherhood of Railroad Trainmen.**

This case also concerned a dispute as to the payment of trainmen for "deadheading." A spare man was called out of the home terminal for duty, and was displaced at an outlying point after one trip, with no responsibility on his part for the condition, but as the result of a change in the assignment of the train on which he was used and of the exercise of seniority by another man. The employees contended that this man was entitled to pay for the "deadheading", under Article 1, clauses (r) and (t), and that the company was not entitled to "deadhead" a trainman, on his own time, from an intermediate point to a terminal.

The Board considered that the conditions involved in this case were exceptional, and were such that the claim should be dealt with in the spirit of the agreement between the railway and its trainmen, rather than on what might be regarded as the technical application of a general rule. Under the circumstances it appeared to the Board that the spare trainman in the case should be regarded as being in the same position as a man who has been sent from a terminal by the Company to fill a temporary vacancy.

The claim of the employees in this particular case was maintained.

**Case No. 393.—Canadian Pacific Railway (Western lines) and Brotherhood of Railroad Trainmen.**

The gross actual mileage of a trainman on a wayfreight was short of the mileage that had been guaranteed by the company as the basis of pay, and the company assigned him

to work as a spare conductor in order to make up the difference between the gross and the guaranteed mileage. The employees contended that under Article 11 of the Schedule the trainman in the case was entitled to the full amount of the guarantee of 2,800 miles, and in addition, to the amount of his mileage as a spare conductor. The Company claimed that the usual practice, in regard to the guarantee, was to include the mileage in freight and passenger service in making up to guaranteed mileage.

The contention of the employees was sustained by the Board.

**Case No. 394.—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

This case related to the dismissal of a conductor on account of his failure to protect the company's revenue properly while on duty. The employees contended that a reasonable doubt existed as to this man's guilt, and pointed to his good record for many years. The company claimed that the evidence taken at the investigation clearly indicated that the man dismissed had failed to report revenue. After hearing the representations of both parties the Board declined to sustain the contention of the employees.

**Case No. 395.—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen.**

A dispute arose as to the method of paying a train crew in short runs during the summer months. The evidence showed that this crew was paid on the "eight hours within ten hours" basis. The employees' statement indicated that the crew were off duty for an hour and twenty minutes during the ten hours of their day, and the Board considered that they were not entitled to extra time in addition to the minimum day "until the crew, or any member thereof, has been on duty, or held for duty, more than eight hours within ten hours from the time the crew came on duty, or until after ten hours has elapsed from the time of coming on duty, regardless of mileage made."

The claim of the employees was denied by the Board.

**Case No. 396.—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

An employee worked as a baggage man from 1910, and the company allowed him seniority as from that date. The employees contended that this man had been considered as an em-

ployee of the express company performing joint service, and that there was no rule in the schedule to protect his seniority prior to 1925, when his name first appeared on the trainmen's seniority list. The Board held that

no protest against the company's action had been made by the employees within the limit prescribed in the trainmen's schedule for making such protests.

The claim of the employees was denied.

## CANADIAN NATIONAL RAILWAY BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

**R** EPORTS have been received of four cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the *LABOUR GAZETTE*, March, 1932, page 283, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

#### Case No. 82.—Operating Department (Atlantic Region)

When the car heating plant at Saint John, N.B., was put into operation each fall during the past eleven years, the company made a practice of assigning the position of stationary firemen to three men who had worked as car-cleaners during the summer months, and who were so classified. During the winter months they were classified as stationary firemen. The company stated that no objection had been taken to this arrangement by the

federated trades, and that the Canadian Brotherhood of Railway Employees had not, previous to last fall, objected to the classification of the men as stationary firemen during the winter months. The employees, on the other hand, maintained that the heating plant was under the jurisdiction of the Car Department, and that, in keeping with the spirit and intent of the schedule, preference in regard to these positions should be given to employees in the mechanical department holding seniority rights as such.

This case had been heard at the February meeting of the Board, when it was referred back to the parties to the dispute for further negotiation, with instructions that, in the event of their failure to reach a satisfactory settlement, they should supply the Board with further information. No agreement was reached by the parties, and the additional evidence submitted was reviewed by the Board. The claim of the employees was sustained.

#### Case No. 84.—Operating Department (Atlantic Region)

This case concerned the claim of certain employees classified as extra labourers for the common labourers' rate of 42 cents per hour, instead of the rate of 30 cents per hour which they were receiving. After hearing, the case was referred back to the parties to the dispute, and subsequently a satisfactory agreement was reached, the matter at issue being thus disposed of.

#### Case No. 89.—Operating Department (Central Region)

The chief clerk in a freight office had entered the service of the former Grand Trunk Railway in 1909, and had been continuously employed by that company until 1917, when he resigned to take a position on the Canadian Pacific Railway. A year later, in 1918, he re-entered the service of the Grand Trunk Railway. A dispute arose between the company and the employees as to the standing of this employee in regard to seniority. The company dated his standing as from 1909, in

accordance with an agreement made with the employee at the time he rejoined the service, which agreement was later confirmed by the General Superintendent. The company pointed out that the existing schedule had not yet become effective at the time that they had agreed to allow unbroken seniority to the employee in question. The employees, on the other hand, claimed that the case should be governed by Article 3, Rule (b) of the schedule, which provides that an employee's seniority shall count from the date of his last entering the service in a position covered by the schedule.

The Board sustained the contention of the employees.

#### Case No. 90.—Operating Department (Central Region)

The question of seniority was raised by the employees in connection with the appointment to the position of Bridge and Building Master's Clerk of a clerk who had previously held "excepted" positions, that is, positions not covered by the agreement. The clerk in question entered the service in 1921, occupying a "schedule" position for six months, after which, from 1922, he held excepted positions continuously until he was promoted to the position of chief clerk in the superintendent's office. In February, 1932, he applied for, and obtained, the position of Roadmaster's and Bridge and Building Master's Clerk. The employees contended that the C.N.R. Eastern Lines Schedule which was in effect in 1922 contained

no provision which permitted him to take an excepted position while retaining his seniority, and that Article 7, Rule (f), expressly provided that the seniority of the employees thereunder should count from the date of last entry into a position covered by the schedule.

The company claimed that as the employee had worked the required six months under the Clerk's Schedule, thereby establishing himself under that schedule, he was entitled to assert himself in connection with the new appointment with his full seniority as from 1921. Article 3, Clause (b), was cited in support of this claim, as follows: "Employees promoted from staffs covered by this schedule to positions on other staffs will retain their seniority rights and rank, and continue to accumulate seniority, provided that same are asserted within thirty days after release from such excepted employment. . . ."

The company pointed out further that several employees on the Northern Ontario District were holding excepted positions as of December, 1931, and, under the provisions of the above-mentioned clause, the names of such employees were added to the seniority list of the divisions on which they formerly held seniority under the Clerks' Schedule. Accordingly, action had been taken in January, 1932, to have the names of such employees properly shown on their respective seniority lists, and the present case was but one of several so dealt with.

The Board denied the claim of the employees.

### STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1932

THE following table shows the number of disputes, workers involved and time loss for June, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1932 . .	17	3,011	38,147
*May, 1932 . .	13	1,521	31,905
June, 1931 . . .	14	1,068	17,724

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes re-

ported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

A substantial increase appears in the number of disputes recorded, with a corresponding increase in the time loss incurred, while the number of workers involved was almost twice as great as during the previous month and during the same month last year, due largely to the occurrence late in June, 1932, of a strike involving approximately 1,300 salmon fishermen operating on the Skeena and Naas Rivers in British Columbia.

Seven disputes, involving approximately 1,000 workers, were carried over from May. Two disputes involving men's clothing factory workers in Montreal, P.Q., commencing during May, 1932, were reported too late to be included in the June issue of the LABOUR GAZETTE. Being unterminated at the end of May, however, these appear in the record for

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to June, 1932			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Blairmore, Alta..	300	7,500	Commenced Feb. 23, 1932; against dismissal of worker; terminated.
Coal miners, Bellevue, Alta...	330	8,250	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore Feb. 23, 1932; terminated.
Coal miners, Joggins, N.S.....	59	354	Commenced May 23, 1932; against reduction in wage rates; terminated June 8, 1932; indefinite.
MANUFACTURING—			
Textiles, Clothing, etc.—			
Men's clothing factory workers, Montreal, P.Q.....	100	2,500	Commenced May 1, 1932; against reduction in piece rates; terminated.
Men's clothing factory workers, Montreal, P.Q.....	200	3,000	Commenced May 18, 1932; against changes in conditions involving certain wage reductions; terminated June 20, 1932; compromise.
Printing and Publishing—			
Lithographers, Toronto, Ont..	8	200	Commenced April 15, 1932; against reduction in wages; terminated.
SERVICE—			
Recreational—			
Motion picture projectionists, Winnipeg, Man.....	3	78	Alleged lockout; commenced Feb. 27, 1932; re union working conditions; terminated.
(b) Strikes and Lockouts Commencing during June, 1932			
LOGGING—			
Pulpwood cutters, South Porcupine, Ont.....	37	600	Commenced June 4, 1932; for increase in piece rates; terminated June 26, 1932; in favour of employer.
Loggers, Nipigon District, Ont.	225	4,000	Commenced June 10, 1932; for increase in wages, reduction in board and improved working conditions; terminated.
FISHING AND TRAPPING—			
Salmon fishermen, Port Essington District, B.C.....	1,300	5,200	Commenced June 25, 1932; for increase in rate for fish; terminated.
MANUFACTURING—			
Rubber Products—			
Rubber factory workers, Toronto, Ont.....	273	4,000	Commenced June 1, 1932; against change in system alleged to have lowered earnings; terminated June 23, 1932; compromise.
Fur, Leather and Other Animal Products—			
Fur factory workers, Toronto, Ont.....	30	150	Commenced June 7, 1932; for restoration of wages previously reduced by agreement; terminated June 13, 1932; in favour of workers.
Textiles, Clothing, etc.—			
Women's clothing factory workers, Toronto, Ont.....	12	275	Commenced June 3, 1932; against dismissal of worker; terminated.
Women's clothing factory workers, Toronto, Ont.....	17	315	Alleged lockout; commenced June 7, 1932; re reduction in staff; terminated.
Other Wood Products—

June. Similarly a dispute involving coal miners at Joggins, N.S., from May 23 to June 8, briefly referred to in June issue, is now included. Ten disputes commenced during June. Of the seventeen disputes in progress during the month six were recorded as terminated, one being in favour of the employer involved, two in favour of the workers concerned, two resulting in compromises, and the result of one being recorded as indefinite. At the end of June, therefore, there were eleven disputes recorded as strikes or lockouts in progress, namely: coal miners, Blairmore, Alta., coal miners, Bellevue, Alta., men's clothing factory workers, Montreal, P.Q., lithographers, Toronto, Ont., motion picture projectionists, Winnipeg, Man., loggers, Nipigon district, Ont., fishermen, Port Essington district, B.C., two disputes involving women's clothing factory workers, Toronto Ont., box factory workers, Winnipeg, Man., and plumbers, Saskatoon, Sask.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto, London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; composers, Regina, Sask., November 21, 1931, one employer; and composers, Saskatoon, Sask., December 14, 1931, one employer. The dispute involving motion picture projectionists employed by a company operating a number of theatres in Montreal, P.Q., commencing August 27, 1931, and carried in the above list since January, 1932, is recorded as having lapsed during June and has consequently been removed from the list.

A dispute involving three motion picture projectionists in two theatres in Sudbury and Sturgeon Falls, Ont., in August, 1931, has been recently reported. It appears that negotiations for the renewal of the agreement were not successful and the union employees were dismissed, being replaced. The dismissed employees secured work elsewhere. There being fewer than six employees involved, the dispute is classed among the minor strikes and lockouts.

In addition to the two disputes involving employees in men's clothing factories in Montreal shown in the table, information has been received recently as to a dispute in another factory. The union reports that on

May 2, 1932, a reduction in piece rates of twenty-five per cent having been refused, the employer closed the factory. The employer states that no dispute occurred, but that a sub-contractor moved to other premises to secure better quarters.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, BLAIRMORE AND BELLEVUE, ALTA.**—These disputes, commencing in February, 1932, were unterminated at the end of June, negotiations for a settlement on June 22 having failed, it is reported, because the miners refused to agree to the indefinite lay-off of certain men, on account of their activity in connection with the calling of these strikes contrary to the agreements in effect.

**COAL MINERS, JOGGINS, N.S.**—This dispute, involving one mine, reported to the Department in June too late to be included in the statistical tables, caused a cessation of work on May 23. The reports received indicate that the dispute was due to wage reductions, effective almost immediately, posted by the employers without negotiations with the miners. The employees applied to the Department for information as to the Industrial Disputes Investigation Act. As the statute requires that thirty days' notice of a proposed change be given, and that no cessation of work should occur before proceedings under the Act had been taken, the employer withdrew the notice, replacing it on June 8 with one giving thirty days' notice. The miners offered to resume work and negotiations for a settlement were entered into. As the company had no orders for coal, work was not resumed. The dispute is, however, regarded as terminated on June 8, 1932.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Two disputes were in progress during the month. The employees ceased work in one establishment on May 1 in protest against a reduction in certain piece rates. The employer had previously observed union conditions, but owing to competition from non-union shops had proposed a reduction in certain piece rates which the union refused to approve. Some of the employees returned to work, and work was sent out to non-union contract shops, but the dispute remained unterminated.

In another establishment a dispute occurred over changes in work resulting from the

installation of new machinery, involving the dismissal of certain employees and the payment of lower wage rates on the operations affected. The employer had been operating under union conditions. Apparently certain employees were laid off on May 18, 1932, and the others ceased work on May 20. Work was resumed on June 20, 1932, the changes in conditions being accepted, but the employer agreed to put the displaced employees on the spare list and employ them when vacancies occurred, and to send no work to outside shops that could be done inside.

**PULPWOOD CUTTERS, SOUTH PORCUPINE, ONT.**

—Employees of a sub-contractor for pulp logs ceased work on June 4, 1932, demanding an increase in the rate per cord. The employer reported that the men were engaged at \$2 per cord, but demanded an increase and were given \$2.50, after which they ceased work, demanding \$3. Work was resumed on June 27, 1932, at \$2.50 per cord.

**LOGGERS, NIPIGON DISTRICT, ONT.**—Information has reached the Department as to a strike of loggers, but particulars have not yet been received. It appears that the strike began in one camp on June 10, 1932, and spread to others, involving approximately 225 men, who demanded increases in wages, reductions in the rates for board, and improvements in working conditions. At the end of the month no termination had been reported.

**SALMON FISHERMEN, PORT ESSINGTON, B.C.**

—Fishermen on the Skeena and Naas Rivers refused to accept the rate of 27½ cents per fish for sockeye salmon offered by the cannery, demanding 40 cents per fish, between 1,300 and 1,600 men being reported as involved in the dispute. Negotiations between the cannery's association and the United Fishermen of British Columbia were in progress, but no settlement had been reached at the end of June.

**RUBBER FACTORY WORKERS, TORONTO, ONT.**

—A number of employees in the shoe department of a rubber factory ceased work on June 1, 1932, in protest against changes in working conditions and rates of pay introduced in connection with an efficiency system, which was claimed to have speeded up work, reducing employment and wages. The number of strikers was reported as 273, but about 300 directly involved, being unable to continue working. The new system was reported to be satisfactory in other departments. The strikers became organized in a local of the Rubber Workers' International Union, and negotiations with the management were carried on from time to time. The resident representative of the Department was requested to assist in bringing about a settle-

ment. About the middle of June the management announced that as no settlement had been reached the strikers would be replaced. Later a settlement was reached between the parties providing that the strikers would be taken back and given full time work, the sliding scale of wages to be suspended for two weeks while the new system was re-checked and unfair features corrected. Work was resumed on June 22.

**FUR FACTORY WORKERS, TORONTO.**—Employees in one establishment ceased work on June 1, 1932, demanding the restoration of the wage scale which had been reduced by agreement owing to slackness in trade. On June 14, 1932, work was resumed, the demands of the workers being granted, except that in certain cases the restoration was postponed.

**WOMEN'S CLOTHING FACTORY WORKERS**

**(DRESSMAKERS), TORONTO, ONT.**—Employees ceased work on June 3, 1932, in one establishment, owing to the dismissal of one worker. One striker was arrested in connection with picketing but was released. At the end of June no termination had been reported.

**WOMEN'S CLOTHING FACTORY WORKERS**

**(CLOAKS & SUITS), TORONTO, ONT.**—Employees in one establishment ceased work on June 7, 1932, owing to a reduction in staff. The union alleged that the employer intended to engage other staff at reduced wages, but the employer stated that there was little work. At the end of the month no settlement had been reported.

**BOX FACTORY WORKERS, WINNIPEG, MAN.**

—Employees in an establishment producing boxes and excelsior ceased work on June 2, 1932, in protest against a reduction in wages of ten per cent, none, however, to be reduced below 12½ cents per hour. As a result of the mediation of the Mayor of the city and the resident representative of the Department, a settlement was reached restoring the wages to previous levels and work was resumed on June 16. On June 21, however, the employees ceased work again, claiming that there was discrimination in regard to re-engaging the strikers. On June 30 the management agreed to re-instate all the strikers without discrimination, and work was to be resumed in a few days. The mediation of the mayor and the departmental representative had again been requested by the strikers, but the settlement was delayed by the other workers in the department were in refusal of the management to negotiate while the strikers were connected with an organization affiliated with the Worker's Unity League which had picketed the plant, police protection being required.

**PLUMBERS, SASKATOON, SASK.**—Employees of all master plumbers ceased work on the expiration of the agreement, May 31, 1932, a new

contract not having been negotiated. The employers had proposed a reduction in wages from \$1.30 per hour to \$1.00. At the end of

the month no settlement had been reported. Early in July an agreement was signed providing for a rate of \$1.05 per hour.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in May was 31 and 13 were still in progress from the previous month, making a total of 44 disputes in progress for the month, involving 13,900 workers and resulting in a time loss of 96,000 working days for the month. Of the 31 disputes beginning in the month, 15 were over proposed reductions in wages, 9 over other wage questions, one over working hours, 4 over the employment of particular classes or persons and 2 over other questions. Settlements were reached in 24 disputes, of which 4 were in favour of workers, 15 in favour of employers and 5 ended in compromises. In two other disputes work was resumed pending negotiations.

A dispute over proposed reductions in wages, involving in all about 5,000 coal miners near Kirkcaldy, Scotland, was in progress between April 29 and May 14, when work was resumed pending negotiations.

### Newfoundland

A strike of about 1,200 iron ore miners at Bell Island, began July 1 against a reduction in wages. Work was resumed July 5, when it was decided to postpone the wage reduction until August.

### Czechoslovakia

The number of disputes reported for the year 1931 was 227, involving 469 establishments and directly affecting 45,970 workers, with a time loss of 509,636 working days during the year. Corresponding figures for the year 1930 are 159 disputes, 251 establishments, 28,073 workers directly involved and a time loss of 391,560 working days.

### Denmark

The number of disputes reported for the year 1930 was 37, involving 5,349 workers, with a time loss of 144,000 working days for the year.

### Norway

The number of disputes reported for the year 1930 was 94 involving 4,652 workers, with a time loss of 240,454 working days for the year.

### Japan

The number of disputes in the year 1930 was 900, involving 79,791 workers, as compared with 571 disputes involving 77,281 workers in 1929.

### Australia

During the fourth quarter of 1931, there were 35 disputes involving 56 establishments and directly affecting 8,787 workers, with a time loss of 55,916 working days for the period.

### United States

The number of disputes which began during the year 1931 was 894, involving 279,299 workers, with a time loss of 6,386,183 working days for the year. The industries in which the greater number of workers were involved in disputes were coal mining, textiles, clothing and building trades. Of the 894 disputes beginning in the year, 490 were over wages questions and 116 over union recognition. Settlements were reached in 880 disputes, of which 410 were in favour of employers, 241 in favour of workers, 186 ended in compromises, 21 were jurisdictional or protest disputes and in the other 22 disputes the results were undertermined.

The number of disputes beginning in April, 1932, was 67 and 47 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 22,114. The time loss for April was 617,010 working days.

The strike involving 30,000 building trades workers in New York City from May 2 to May 18, as reported in the June LABOUR GAZETTE, did not terminate until June 16. A dispute as to the settlement ensuing, the resumption of work was delayed and the wage reductions were modified to be 15 per cent for mechanics and 17 per cent for helpers.

## MINIMUM WAGES FOR WOMEN IN ALBERTA

### Amendment of Order Governing Factories

THE Minimum Wage Board of Alberta have amended Order No. 1, governing female employees in the manufacturing industry (LABOUR GAZETTE, August 1925, page 777) by altering the provisions in regard to apprentices in factory occupations. Formerly the term of apprenticeship was divided into three periods of three months each, the minimum wage being \$6 for the first period, \$8 for the second, and \$10 for the third period. The periods to which these rates apply are now extended to four months each, the total term of apprenticeship being extended from nine months to one year. Some changes also appear in the list of industries covered by the order.

#### ORDER No. 1, CLAUSE 3 AMENDED

Order No. 1 of the Minimum Wage Board is amended by striking out Clause 3 thereof and substituting therefor the following:—

All female apprentices employed in photographic studios or any business, trade, calling, or occupation in which any of the articles or commodities mentioned in the following list are

manufactured, prepared or adapted for use or sale:

Awnings, bedding, mattresses, men's neckwear, overalls, shirts, tents, umbrellas, waterproof clothing, window shades, caps, carpets, cigars, elastic goods, furniture, gloves, hats (other than millinery), hosiery, ladies' and children's wear, leather goods, regalia, rugs, boots and shoes, dipped chocolates, draperies, furniture covering, men's ready-to-wear clothing, paper boxes, garment alterations, jewellery manufacturing, knitting factories or any allied industry, shall be paid wages at a rate not less than—

Six dollars per week for the first, second, third, and fourth months, provided that in garment manufacturing, where work is paid for on a piece-work basis, the rate of wages to learners during the first six weeks of employment shall be that amount earned at the said piece-work rates prevailing from time to time during the said period of six weeks, and that following the said period of six weeks, the rate of not less than \$6 per week.

Eight dollars per week for the fifth, sixth, seventh, and eighth months.

Ten dollars per week for the ninth, tenth, eleventh, and twelfth months, after which period she shall be paid not less than the minimum rate of \$12.50 per week.

## MINIMUM WAGES FOR WOMEN IN BRITISH COLUMBIA

### Temporary Wage Reduction in Fruit and Vegetable Industry

THE Minimum Wage Board of British Columbia has issued the following emergency Order, dated June 14, 1932, providing for a deduction of 10 per cent in the minimum wage for experienced female employees in the fruit and vegetable industry, as fixed by the Order made in 1926 (LABOUR GAZETTE, October, 1926, page 948). The minimum wage fixed by that Order for experienced female employees was \$14.40 for a week of 48 hours. The new Order is as follows:—

#### ORDER No. 17A (EMERGENCY) RELATING TO FRUIT AND VEGETABLE INDUSTRY. EFFECTIVE JUNE 15TH, 1932, TO NOVEMBER 15TH, 1932.

(Adam Bell, Chairman, Helen Gregory MacGill, and Thomas Mathews.)

Whereas on the 3rd day of September, 1926, an obligatory Order was issued by the Minimum Wage Board relating to the fruit and vegetable industry under the provisions of the "Minimum Wage Act," being chapter 173 of the "Revised Statutes of British Columbia, 1924," by paragraphs 2 and 3 of which Order a minimum wage in respect of the said industry was fixed for experienced female employees therein:

And whereas the said Order became effective in sixty days from the said date thereof, and has since been continuously in force:

And whereas the Board, in the exercise of the discretion vested in it by the said Act, and

without reconvening or calling any conference, has reopened the question respecting the minimum wage so fixed by the said Order, and has considered the question:

Now the Board doth Order, in amendment of the said Order of the 3rd day of September, 1926, that for a period of five months from the 15th day of June, 1932, to the 15th day of November, 1932, the minimum wage fixed by the said Order for experienced female employees in the fruit and vegetable industry (including the respective rates per hour or per piece fixed in respect thereof) shall be reduced by the deduction therefrom of ten per centum of the amount thereof, such reduction to apply only in respect of employees who work forty-eight hours or more during a week of seven days; and that except to the extent and for the period of five months herein provided the said Order of the 3rd day of September, 1926, shall continue in full force and effect as if this Order had not been made.

General Hertzog, Prime Minister of the Union of South Africa, recently expressed approval of a proposed national scheme for the relief of unemployment under which a distinct fund would be maintained, to be used in times of stress for creating work for the unemployed. The scheme, as devised by Mr. L. Graduer, would involve a general tax on all incomes, ranging upwards from 3d. a week, and the creation of unemployment committees in various areas to control expenditures from the national fund.

## MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1931

THE eleventh annual report of the Ontario Minimum Wage Board reviews the administration of the Act during the year 1931. Dealing with industrial conditions in women's occupations coming within the scope of minimum wage legislation the report makes the following comment: "The Minimum Wage Board has been operating during 1931 in the shadow of the depression. The women who work have suffered severely. Yet the picture is not so black as it might have been. One reason is the well known fact that the women's trades are more regular in employment than the men's trades. Another reason lies in the underpinning given by the orders of this Board. From the first the minimum rates were set at modest levels, and were not raised during periods of temporary expansion. Consequently there has been no general demand that they be lowered during the present depression."

The statistics in the report show that the number of female factory employees in Ontario during the past six years is as follows: 43,242 in 1926; 45,416 in 1927; 50,118 in 1928; 53,461 in 1929; 50,069 in 1930; and 47,086 in 1931. Taking the returns for the past three years, the employment figures indicate that in 1929 there were 7,723 girls under 18 years employed; in 1930 there were 5,122, and in 1931 the total was reduced to 3,511. The decrease in employment for all female workers from 1929 to 1931 was 11.9 per cent, while for young girls it was 54.5 per cent. After pointing out that the proportion of young girls to all female workers employed was 14.5 per cent in 1929, 10 per cent in 1930, and 7.4 in 1931, the report observes: "There is comfort here for it shows that the older and higher paid workers have not been let out and replaced by younger and cheaper workers. Moreover, fewer of the younger girls are away from home and the suffering is less than if an equal number of independent working women had been let out." It is stated that there was no noticeable change as respects the employment of married women, there having been no general movement either to replace them with single women or the reverse.

In regard to the question of the continuance of the present minimum wage scale the report states as follows:—"The Board feels that any considerable and permanent reduction of the cost of living of working women would involve a scaling down of the minimum wage rates. It is testing the figures in its budget monthly. Thus it has been found that the reductions

in the necessary expenses of a woman worker are not like the big drops in raw materials, or even in wholesale prices. Careful tests have shown little change in the price of board, which is the biggest item. Nor are car fare, laundry and other items in sundries less. Clothing is somewhat lower in price. As the winter passes the Board is watching the situation closely, prepared to take such action as may be shown to be wise in view of the purpose of the law and the interests of the workers as well as the employers."

The minimum wage rates are established as a result of surveys of the cost of living in the various sections of the province. The cost of living budget of an average working woman in Toronto is first estimated as a basis for these calculations, the budgets of the workers in other localities being adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns, villages and country districts. The budget for Toronto as revised to October 1931, allows \$364 per year, or \$7 per week for board and lodgings; \$115.05 for clothing; \$171 for sundries (including laundry, doctor, dentist, car-fare, amusements, church, etc.) making a total of \$650 for the year. The weekly budget for Toronto is therefore as follows: board and lodging, \$7; clothing, \$2.21; sundries, \$3.29, making a total of \$12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

In enforcing the provisions of the Act, the Board employs three chief methods. The first is to require the compulsory posting of cards containing the wage orders of the Board, and it is the duty of factory inspectors to see that these are properly displayed. The Board has a second effective method through the checking up of complaints. During the year, 411 complaints were dealt with and adjusted satisfactorily. Then there is the close analysis of wage returns from employers. Any apparent lack of conformity to the orders is taken up with the firm concerned. In 1931, there were 460 firms interrogated out of a total collection of 6,219 wage sheets.

While the Board collects arrears of wages due to women workers as a part of its administrative duties, it does not regard this phase of its activity as any indication of the success of its work. Its aim "is to support the minimum standards so thoroughly that there shall be no arrears to collect. Until that perfect condition is attained it continues to collect

arrears, both as a wholesome discipline for offending firms, and in order to recoup its clients for earnings which they have not received." In recent years the total sums thus

disbursed have been less than formerly which is taken as evidence that the orders are being more completely obeyed. During the year, 61 firms made payments of arrears to 80 em-

\*In places between 10,000 and 30,000 population, minimum wage is \$11 per week; between 4,000 and 10,000, \$10; between 1,000 and 4,000, \$9; all below 1,000 and rural parts, \$8.

ployees. The total amount collected was \$1,-623.63 of which the largest to any worker was \$110, the average being \$20.29.

The Board has authority to issue permits allowing lower wages to handicapped employees, or to suspend or vary an order in in cases of emergency. The proportion of these permits is so small as not to affect the general standards of wages while allowing for a desirable flexibility in administration. During the year, 168 firms were issued such permits, the number in force at the close of the year being 161, of which 120 were for handicapped workers.

A summary of the year's activity indicates that on the whole the rates of wages throughout the province were lower than in the preceding year. Of 42 sections of industry and trades covered by the Act the rates increased in 12 and decreased in 30, though in no case has the difference been large. The number of factories employing women remains unchanged at 2,211, with an average female working force of 21.3.

In the accompanying table are summarized the chief statistics from 6,219 establishments employing 67,049 women and girls in the various industries covered by minimum wage legislation.

### Workmen's Compensation in Quebec

Regulations No. 5 and No. 6 of the Quebec Workmen's Compensation Commission were approved by Orders in Council dated June 22 and June 30. Other regulations of the Commission were given in the *LABOUR GAZETTE*, February, 1932, page 173 and March, 1932, page 299, and previous issues.

#### REGULATION No. 5

Acting in virtue of the powers conferred upon it by article 77 of the Workmen's Compensation Act, 1931 (21 Geo. V, Chap. 100) the Quebec Workmen's Compensation Commission enacts that the saw-mill industry is not subject to the act except when seven or more workmen are employed generally in such industry and such during at least three months per year.

The industry thus excluded from the operation of the act may however, upon application of the employer made to the Secretary of the

Commission, pursuant to article 78, be added to schedule 1.

The assessment which may be imposed must never be less than the sum of \$50.

#### REGULATION No. 6

Acting in virtue of the powers conferred upon it by article 77 of the Workmen's Compensation Act, 1931 (21 Geo. V, Chap. 100), the Quebec Workmen's Compensation Commission enacts that the transportation industry, of every kind and class whatsoever, and all the industries mentioned in class 24 of schedule 1, save the operation of theatres and places for exhibitions by moving picture machines, licensed under the law of the province, are subject to the act only when they employ four or more workmen.

The industries thus excluded from the operation of the act may however, upon application of the employer made to the Secretary of the Commission, pursuant to article 78, be added to schedule 1.

### Workmen's Compensation in Alberta

The Workmen's Compensation Board of Alberta recently issued Regulation No. 20, under the Workmen's Compensation Act (Accident Fund). Earlier regulations were given in the last issue (page 671), in the issues for May (page 540) and April (page 425), and in earlier issues.

#### REGULATION No. 20

Where the owner of a vehicle is also the driver of the same, and is paid on a cubic-yard-mile, or hourly, or daily basis, for services of himself and his vehicle when working for an employer operating an industry as defined in the schedules, then such owner-driver is deemed to be a "workman" within the meaning of The Workmen's Compensation Act (Accident Fund); and (1) for the purpose of assessment the sum of three dollars and seventy-five cents (\$3.75) per day shall be deemed the daily wage for such workman; and (2) the same rate shall also be

used to ascertain the average earnings on which compensation will be payable to such workman if injured.

The mortality experience of the International Typographical Union for 1931 showed a slight increase over the previous year in the number of deaths from pulmonary tuberculosis and cancer and a marked increase in mortality from diabetes. The number of deaths from nephritis, which is often held to mask deaths from lead poisoning, has decreased during recent years, and during the past three years no deaths have occurred from lead poisoning. This notable improvement in a former serious hazard of the printing industry is the result of better sanitation and ventilation of printing plants throughout the country (*Monthly Labour Review*, Washington, June, 1932).

## MINERAL INDUSTRY IN BRITISH COLUMBIA IN 1931

THE annual report of the British Columbia Bureau of Mines for the calendar year 1931 shows that the gross value of the mineral production of the province in that year was \$34,883,181, a decrease of \$20,508,812, or 37 per cent, as compared with 1930, the heavy decline being attributed to the much lower metal prices and lowered outputs. The report describes mining and prospecting activities in the province, mineral production being reviewed by districts and divisions. Included also are the reports of the resident mining engineers and the reports of the inspectors of mines.

The mineral production of British Columbia is divided into four classes—metal-mining, coal-mining, structural materials, and miscellaneous metals and minerals. Of these, the first class is by far the most important, with a production for 1931 valued at \$22,827,565 (including placer gold). This is followed by coal with an output valued at \$7,684,155, and structural materials and miscellaneous metals and minerals, totalling together \$4,371,561. Declines in the value of production during the year in the principal components of the mineral industry, as compared with 1930, were as follows: gold, \$164,925; silver, \$2,059,756; base metals (copper, lead, and zinc), \$16,015,384; coal, \$1,751,495; structural materials, \$539,268. Miscellaneous metals and minerals, on the other hand, showed an increase of \$22,016 in value.

*Labour and Employment.*—The mining industry gave employment in 1931 to a total of 12,171 workers, as compared with 14,032 in 1930. Of the total of 12,171, there were 4,082 employed in and about coal mines; 2,297 employed in lode mining; 688 in placer mining; 581 in concentrators; 3,157 in smelters; 460 in quarries; 526 in structural material plants; and 380 in miscellaneous mineral work.

The statistics for coal mining indicate that of the total of 4,082 employed, 2,957 were working underground. During 1931, eighteen coal companies operated 20 collieries with 40 mines. In the supervision of the 2,957 underground employees there were fifteen managers, two safety engineers, twenty-three overmen, 131 firebosses and shot-lighters—a total of 171—one official for every 17 persons employed underground.

The collieries were practically free from labour disputes during the year, the only loss of time being through lack of trade. Taking the average of all the mines in Vancouver Island District, about 25 per cent of the working-days were lost through lack of trade.

In the Nicola-Princeton District the different collieries worked from 65 to 90 per cent of the working-days, averaging for the district about 72 per cent of the working-days. In the East Kootenay district the mines worked from 40 per cent at the lowest to 75 per cent at the highest of the working-days during the year, and worked for an average for the whole district about 45 per cent of the time.

Commenting on the decline in coal production during the year of 9.5 per cent, the report observes that the rate of decrease which has been in progress since 1928 is slowing up and that it would seem that British Columbia collieries are not continuing to lose business to imported fuels so fast as formerly. In this respect the report states as follows: "Many factors are now aiding coal, the full effect of which have not yet materialized. The Dominion Government subventions and bonuses, the campaign by the British Columbia Government, the British Columbia Coal Committee and the operators, to show that British Columbia coal is the safest and most efficient fuel, are all assisting and the public is beginning to realize that if there is anything in the 'Buy Home Products' campaign, then British Columbia coal should get a hearty reception. The discount on Canadian money is helping the sale of more British Columbia coal in the United States, as it largely offsets the duty."

*Accidents.*—During the year there were five fatal accidents in coal mining as compared with 54 for 1930 when a toll of 45 lives was taken by one mine disaster. Three of the five fatalities in 1931 were caused by mine cars and haulage and two by falls of roof and coal. The ratio of fatal accidents per 1,000 persons employed was 1.22, as compared with 11.62 in 1930. In 1929, the ratio was 2.38; in 1928, 2.64; in 1927, 2.10; in 1926, 1.88; in 1925, 1.10; in 1924, 1.66; in 1923, 7.32; in 1922, 4.66; the average for the ten-year period being 3.70.

The number of fatal accidents per 1,000,000 tons produced during 1931 was 2.81; during 1930 the fatalities per 1,000,000 tons mined was 28.61; in 1929, 5.33; in 1928, 5.54; in 1927, 4.48; in 1926, 4.3; in 1925, 2.45; in 1924, 4.52; in 1923, 1.76; in 1922, 12.01; the average for the ten-year period being 8.67 per 1,000,000 tons of coal mined.

There were six fatal accidents in and about the metalliferous mines in 1931, being thirteen less than the figures for 1930. By causes these fatalities were classified as follows: falls of ground, 3; falling in chutes and shafts, 2; and

fall of ore, one. The ratio of fatal accidents was 2.61, compared with 5.31 in 1930. The ratio for the last ten-year period was 2.60. The tonnage mined per fatal accident was 924,580, compared with 358,097 tons per fatal accident in 1930. The tonnage mined per fatal accident for the last ten-year period was 451,036 tons.

*Safety Work, Inspection, etc.*—The report of the chief inspector of mines gives production statistics for the various mines and indicates the trend of hydro-electric development and fuel oil competition. The quantity of explosives used in mining operations and the number of shots fired are presented in tabular form. Another section shows the distribution of safety lamps and illuminant used. Details are also given regarding mine ventilation, mine air sampling and precautions against coal dust and explosions. During the year there were six prosecutions for infractions of the Coal Mines Regulation Act and special rules, all of which resulted in convictions.

*Rescue Stations and First Aid.*—The Department has now four mine-rescue stations in different parts of the Province and centrally located in the mining districts—namely, at Nanaimo, Cumberland, Princeton, and Fernie. During the year many requests were received from medical men for oxygen and the inhalators for use in emergencies, and immediate service was rendered in every case. In the larger coal-mining districts of Crow's-nest, Cumberland, and Nanaimo experienced teams maintain a regular schedule of training throughout the year and so keep ready for any emergency calls. The preliminary training course consists of twelve two-hour lessons in the actual use of the oxygen apparatus and Burrell all-service gas-masks in an irrespirable atmosphere and instruction on the approved method of dealing with mine fires and recovery-work. The training itself is strenuous work, and all candidates have to undergo a special physical examination before starting training and must be under 45 years of age. In all the main mining districts of the Province first-aid and Mine Safety Associations carried on valuable work throughout the year by carrying on classes of instruction and by the trained members rendering first aid in actual accidents in mines. During the year demonstrations and competitions in first aid, safety methods, and mine-rescue work were held at Britannia, Cumberland, Nanaimo, Bamberton, Kimberley, Princeton, and Fernie, and while the majority of those taking part

were coal and metalliferous miners, there were a number of well-trained men from quarries and logging camps, and in most competitions there were also a number of women and a large number of young people from school age upwards. The total number taking part in the above demonstrations in the mining districts during the year was over 800. The work is actively supported by the management and officials of the different industries and members of the Inspection Branch of the Department of Mines, which also manifests its support in the shape of financial grants to raise this work to the greatest possible efficiency.

All the larger operating companies of metalliferous mines carried on or inaugurated accident-prevention work during the year. In the case of the larger mines a safety-first engineer devotes all his time to the promotion of safety methods of performing the work both underground and above. Meetings are held and every effort made to interest the employees to take an individual share in this work as it is realized that a very large percentage of accidents is due to some act of commission or omission on the part of the injured party. The year just finished showed the lowest accident ratio for many years and there can be little doubt, states the report, that this was due largely to safety-first consciousness.

### Industrial Accidents in Ontario in June

During the month of June there were reported to the Ontario Workmen's Compensation Board, 3,614 accidents, as against 3,285 during May, and 4,860 during June a year ago. The fatal accidents numbered 25, as compared with 18 in May, and 32 in June last year. The total benefits awarded amounted to \$444,674.81 of which \$377,856.25 was for compensation and \$66,818.56 for medical aid. This brings the total benefits awarded during the half year ending June 30 to \$2,668,718.13, as compared with \$3,131,715.58 during the corresponding period of 1931.

During the first six months of 1932 the accidents reported numbered 21,877, a decrease of 4,056 from the number for the corresponding period of 1931. The fatal accidents for the six months' period were: 1932, 130; 1931, 167. The average daily benefits awarded for the half year were \$17,792, and the average number of cheques issued daily, 738.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Quebec Government Offers Safety Trophy for Competition

The Hon. C. J. Arcand, Minister of Labour of the Province of Quebec, has donated a handsome bronze "Safety Trophy" for competition among provincial industrial plants. The trophy indicates the Department's approval of inter-plant safety competition as an important factor in accident reduction. Mr. Arthur Gaboury, general manager of the Province of Quebec Safety League, urges every firm, large or small to enter the competition. "The action of the Minister," he says, "should do much to foster a keenness in inter-plant competition. From the experience of those already enrolled in the contest, it has been clearly shown that accidents are on the decrease, and that the employees themselves are taking a deep interest in the movement."

### Safety Work in Nova Scotia

Mr. Gordon S. Harvey, in his retiring address as president of the Nova Scotia Accident Prevention Association, referred to the difficulty of carrying on safety work in the smaller industries. "The problem of accident prevention in this province," he said, "is exceptionally difficult owing to the wide diversification of industry and the number of comparatively small operations scattered from one end of the province to the other. There are about 2,500 firms assessed under the Compensation Act, and many of these carry on in a very limited way and a considerable number are engaged in seasonal occupations. Properly organized safety work, as we usually interpret it, is practically impossible in connection with these smaller operations. We, however, should not feel discouraged if our efforts in connection with these do not show an improvement in conditions comparable with the larger industries."

Mr. M. L. Fraser, the Field Officer of the same organization, also referred to the special difficulties of accident prevention work in Nova Scotia, as being for the most part a province of small industries. Referring to the general work of the association, he said:—

"The method of organization for industrial safety in Nova Scotia is equal, and probably superior in some respects, to the methods employed in other provinces. In most provinces the work is carried on by the provincial factories inspectors, without being augmented by

employers' safety associations. In Nova Scotia we have all the employers under the scope of the Compensation Act organized in one association, which is not the case in any other province. Activities are thus centralized and overlapping prevented, and administrative work and expense simplified and minimized. Our association affords the medium for educating the employers and enlisting their friendly co-operation. The provincial factories inspector offers the medium for compulsion if and when that seems necessary in connection with any of the industries covered by the Factories Act. The Compensation Board also has certain penalizing powers which can be invoked if and when required. Under such conditions then we have the combination of legislative authority and voluntary effort."

### Mining Accidents in Ontario in 1931

Mining accidents in Ontario during 1931 are reviewed in a recent report (Bulletin No. 81) recently published by the provincial Department of Mines. During the year 1931 at the mines, metallurgical works, quarries, clay, sand and gravel pits regulated by the Mining Act, there were 1,849 accidents to employees reported to the Department of Mines up to January 15, 1932. Thirty-seven fatalities, arising out of 36 separate accidents, were recorded. These returns represent a decrease of 374 in the total number of casualties and a decrease of 19 in the number of men killed over the preceding year.

The report shows a fatality rate of 2.03 per thousand men employed, which is 0.98 per thousand lower than the average for the past twenty-five years. In 1931 there were 18,267 persons employed in the industry. An analysis of fatalities at mines by causes indicated that 31 per cent were caused by falls of ground; 17.2 per cent were shaft accidents; 6.9 per cent were due to explosives; 3.5 per cent to run of ore or rock, and 13.8 per cent were classed as miscellaneous. Surface accidents represented 27.6 per cent of the total.

There were 100 non-fatal accidents per thousand men employed, which shows a decrease of 17 per thousand men from the rate in 1930. The percentage of non-fatal accidents followed by infection decreased from 6.2 per cent in 1930 to 5.3 per cent in 1931. The records show that infection followed in 96 cases out of a total of 1,813 non-fatal accidents. The chief cause of non-fatal accidents at mines was fall of rock or ore which was responsible for 246 accidents; followed by

194 accidents resulting from falls of persons. At metallurgical works, the largest number of accidents (48) was caused by falling objects. At quarries, the handling of material accounted for 34 accidents, and was the main cause. At gravel, sand and clay pits, falls of persons and the operation of machinery each were charged with 6 accidents of the total of 26 for this group. There were 17 accidents due to explosives and these resulted in 3 men being killed and 16 injured. Accidents due to the use of electricity numbered 13, with no fatalities, which was a marked improvement over the previous year. The report points out that during the past year methods were adopted at the mines to reduce the hazards attendant upon operating disconnecting switches. It was found that, owing to the presence of dust and humidity, a higher rupturing capacity for the enclosed type of switch was required at mines than at most other industrial plants. A more rugged switch with greater rupturing capacity was supplied for new installations and in many places replaced the switches in use. Switches in service were also equipped with means of preventing the door of the switch from flying open. Where possible many of the switches were installed at a greater height and operated by means of a stick.

The report tabulates the accident hazard of each class in the mining industry according to the Workmen's Compensation Board rating. This rating (provisional) for all industries in 1932 was given in the *LABOUR GAZETTE*, April, 1932, page 411. An account is also given of activities at the new wire rope testing laboratories.

### High Accident Rates in British Mines

In Great Britain, out of the eight industrial diseases standing at the head of the compensation claims, five are found to be the monopoly of coal miners, i.e., miners' nystagmus, beat knee, beat hand (which lead the list in this order), and beat elbow and synovitis of the wrist (which stand fifth and sixth).

Miners similarly claim a high percentage of accidents; the miners comprise only 12.5 per cent of the total workers at risk, but they account for 42 per cent of the accident claims; while every year 23 per cent of the coal miners have cases for compensation, for factory workers the percentage is only 3.8. A group of compensation cases which has come to the fore in recent years includes epitheliomatous ulceration. Its importance is due largely to the cases occurring among cotton spinners, originating from their use of mineral

oil. The most recent disease to which the provisions of the Act have been opened is silicosis, of which the widespread nature and extent can only be fully known as the provisions of the Act are more understood.

### Reduction in Number of Fatal Accidents due to Explosives

A marked reduction in the number of fatalities caused by the use of explosives is noted in the annual report of the Explosives Division, Department of Mines, for the calendar year 1931. During the year there were 9 such fatalities in mines and quarries and 23 in the conduct of operations elsewhere. This represents a reduction particularly in respect to mines and quarries for which the average figure for the five preceding years was 20.6. The average number of fatalities in other operations was 26.4, excluding from consideration the abnormal loss of life occasioned by the Brockville disaster of 1930. The number of persons who sustained injuries in mines was 67, slightly above the average figure of 60, but the number injured in other classes of work showed a considerable increase, from an average of 100 to 167. It is probable, the report states, that the efforts made to collect information of accidents, other than those which are included in returns to Dominion or Provincial Government departments, are meeting with greater success.

A statistical summary of accidents is presented, these being classified according to their probable cause. Nine accidents, of which 6 were fatal occurred in the manufacture of explosives, while 184, of which 32 were fatal, were listed in the group classified as "use and miscellaneous." In this group, the greater number resulted from operations connected with shot-firing. The report emphasizes the number of accidents due to playing with detonators and other explosives, and states:—

"Four lives were lost and 46 persons, nearly all children or young lads, were injured as a result of playing with explosives. This annual loss, both in life and in the maiming of the young, does not yet show that abatement which it is hoped may be secured by constant educational effort and the publicity given to the distressing consequences of such accidents."

### Metal Mining Accidents in United States

According to a report recently received from the United States Department of Commerce (Bureau of Mines) the metal mining industry was characterized by fewer accidents in pro-

portion to the number of men than in any year since 1913. Reports from operating companies in all States showed 118,735 men employed in 1929 and a total of 34,618,120 man-shifts worked, an average of 292 work days per man. Accidents during the year caused 350 deaths and 23,092 injuries involving disability exceeding the remainder of the day on which the accident occurred. Considering all mines as a single class, the chief cause of fatal accidents was, as usual, fall of rock from the roof or wall. The same cause was also responsible for the greatest number of non-fatal accidents. The length of disability of the employees who were injured by accidents at the mines cannot be ascertained, but it is estimated that the 350 deaths and 23,092 non-fatal lost-time injuries represent a period of disability or loss of time equal to 2,903,000 man-days. This figure represents an average of 124 days per accident and a loss of 8 days for each 100 man-shifts worked by all employees at all mines.

#### Quarry Accidents in United States

Quarry accidents in the United States during 1929 are analysed in a recent bulletin published by the United States Department of Commerce (Bureau of Mines). The report observes that on only three occasions in the history of stone quarrying in the United States has the mortality rate from accidents been so low as in 1929, when it was 1.65 for every 1,000 employees. The non-fatal injury rate for 1929, covering all cases of disability extending beyond the day on which the accident occurred, was 128.14. The returns for 1929 showed that the average number of men employed in and around the quarries and at crushers, cement mills, lime kilns, and rock-

dressing plants was 85,561, or 4,106 less than the number reported for the previous year. The average workman was employed 268 days, as compared with 272 days in 1928. The aggregate volume of labour for all employees was equal to 22, 967,579 man-days, a decline of 6 per cent from the year before.

Accidents during the year resulted in 78 fatalities and 6,173 injuries to men working in and about the quarries and 48 fatalities and 3,637 injuries to men employed at the outside plants. Fatal accidents inside the quarries were occasioned largely by falls, or slides of rock or overburden, and by explosives, haulage, falls of persons, machinery, and boiler or air-tank explosions. Non-fatal injuries among the workers in the pits were due mainly to handling rock at the face, flying objects, falls or slides of rock or overburden, haulage, and machinery.

#### Effects of Harmful Working Conditions

At the annual conference of the State and Provincial Health Authorities of North America, held at Washington, D.C., in June, working conditions in industry were noted as being an important factor in the increasing death rate from degenerative diseases. Harmful conditions, it was stated, double the risks taken by industrial, as compared with clerical, professional and commercial workers. "The industrial worker at the age of 20," it was stated, "has a life expectancy of 42 years. The 22-year-old worker engaged in the non-hazardous occupations has a life expectancy of 49 years, a difference of seven years." Important factors in causing this shorter life expectancy are dusts, excessive fatigue, bad posture, extreme changes of temperatures and sometimes specific occupational poisonings.

### MINE SAFETY REGULATIONS IN QUEBEC

NEW regulations respecting the sanitary conditions and safety in mines were approved by the Provincial Government of Quebec on June 1, on the recommendation of the Hon. J. E. Perrault, Minister of Mines of the Province. The Minister pointed out that the number of underground mining operations was increasing and that measures were necessary to reduce the number of fatal and other serious accidents.

#### REGULATIONS FOR THE PROTECTION OF WORKMEN IN UNDERGROUND WORKINGS

**Fire Protection.**—(1) No inflammable refuse shall be allowed to accumulate underground, but shall be removed from the workings at least once a week and brought to the surface and there disposed of in a suitable manner; (2) All tim-

ber not in use in a mine shall, as soon as practicable, be taken from the mine and shall not be piled up and permitted to decay therein; (3) Oil and grease kept underground shall be contained in suitable metal receptacles and the amount so kept shall not exceed the requirements for seven days; (4) No carbide shall be taken underground except in suitable individual containers, and only in sufficient quantity for the day's use; (5) Legible signs showing the way to emergency exits shall be posted in prominent places underground and all workmen shall be instructed as to the location of auxiliary exits; (6) All fans except auxiliary fans shall be above ground and shall be reversible and all fans and structures containing the same shall be fireproof.

**Handling Water.**—(7) Every working mine shall be provided with suitable and efficient machinery and appliances for keeping the mine free from water, the accumulation or flowing of

which might endanger the lives of workmen in such mine or in any adjoining mine; (8) Where there is or may be an accumulation of water any working approaching the same shall have boreholes kept in advance, and such additional precautionary measures shall be taken as may be deemed necessary to obviate the danger of a sudden breaking through of the water; (9) Every dam or bulkhead and its location shall be clearly shown on the mine plan, and no such dam or bulkhead shall be erected without the permission of the Inspector being first obtained. This rule shall not apply in the case of a small structure less than three feet in height used solely for diverting the ordinary level drainage and which does not impound any appreciable volume of water.

**Air supply.**—(10) The ventilation in every mine shall be such that the air in all its workings that are in use or are to be used by workmen shall be free from dangerous amounts of noxious impurities and shall contain sufficient oxygen to insure the health of anyone employed in any such mine. In any mine workings where such conditions cannot be obtained by natural ventilation, means for mechanical ventilation shall be provided and kept in operation until such workings have been abandoned or until satisfactory natural ventilation shall have been brought about therein; (11) Underground workings, which have been in disuse for some time shall be examined before being used again, in order to ascertain whether foul air or other dangerous gases have accumulated there, and there shall be allowed therein, only such workmen as may be necessary to make this examination until such places are in fit state to work or travel in; (12) No internal combustion engine shall be installed or operated underground in any mine.

**Sanitation.**—(13) The underground workings of every mine shall be provided with sufficient and suitable sanitary conveniences in accordance with the following regulations.—(a) Where the number of persons employed on any shift does not exceed one hundred, there shall be one sanitary convenience for every twenty-five persons or portion thereof; (b) Where the number of persons so employed exceeds one hundred, there shall be one additional sanitary convenience for every fifty persons or portion thereof over the first hundred; (14) These sanitary conveniences must be kept in a cleanly manner; must be adequately supplied with chloride of lime, sawdust, fine ash or other suitable absorbent; must be removed and cleaned regularly; and must be conveniently placed with reference to the number of men employed on the different levels.

**Hoisting and shafts.**—(15) In a shaft or winze, in the course of sinking, the bucket, skip or cage shall not be lowered directly to the bottom if there are men working there, but shall be held at least fifteen feet above the bottom and shall remain there until the signal to lower same has been given by the men on the bottom; (16) No bucket shall be allowed to leave the top or bottom of any shaft until the workman in charge thereof has steadied it or caused it to be steadied; (17) The doors in safety cages shall be so fitted that they cannot be accidentally opened and shall be closed when hoisting or lowering men; (18) Hoisting from underground workings with horse and pulley-block is forbidden; (19) No hoist used for the raising or lowering of persons, or used in shaft sinking shall be equipped with a brake operated by

means of the hoistman's foot unless such brake is an auxiliary electrical device; (20) All electric hoists fitted with mechanically operated brakes shall be so installed that (a) the mechanically operated brakes will be applied automatically the moment the power supply fails; (b) in case of a heavy overload, such as would be caused by the shaft conveyance leaving the rails or becoming jammed in the shaft, a circuit breaker will cut off the power and thus allow the mechanically operated brakes to come into play; (c) a suitable overwind device, which can be set to engage shaft conveyance at any point in the head-frame, will cut off the current, in case of an overwind past this point, and thus allow the mechanically operated brakes to come into play. In default of a device of this nature the hoist shall be equipped with some other form of satisfactory and dependable overwind device; (d) the brakes shall on failure of the power supply, be put into play by mechanical means, preferably gravity, and shall in no case be operated by an auxiliary electrical current; (e) the brake and clutch operating gear shall be so interlocked that it shall not be possible to release the brake while the clutch of the corresponding drum is disengaged; (21) When men are lowered, the drum of the hoist must be clutched to the engine; (22) A non-reversible steam or air hoist must be equipped with a suitable throttle controlled exhaust; (23) In every shaft exceeding six hundred feet in depth adequate provision shall be made whereby the hoistman is warned of the arrival of the bucket, cage or skip at a point in the shaft, the distance of which from the top landing place is not less than the equivalent of three revolutions of the drum of the hoisting engine; (24) No hoisting rope which has previously been in use in any place beyond the control of the operator shall be put on anew except with the written permission of the Inspector of Mines; (25) No hoisting rope shall be used which is not accompanied by a certificate from the manufacturer giving the following information: name and address of manufacturer, coil or reel number, date of manufacture, diameter and circumference of the rope in inches, weight per foot in pounds, number of strands, class of core, number of wires in strand, diameter of wires in decimals of an inch, breaking stress of steel of which wire is made in tons per square inch, estimated or actual breaking load of rope, length of rope; This certificate or a copy of this certificate, shall be kept on hand at the mine and shall be exhibited to the Inspector when required; (26) The factor of safety of all hoisting ropes when newly installed in shafts less than two thousand feet in depth shall in no case be less than six, and in shafts over two thousand feet in depth shall not be less than five. The factor of safety shall be calculated by dividing the breaking load of the rope as given in the manufacturer's certificate by the sum of the maximum load to be hoisted plus the total weight of the rope in the shaft when fully let out; (a) No hoisting rope shall be used for the raising or lowering of men when its factor of safety based on its existing strength and dead load shall have fallen below 4.5; (b) No hoisting rope shall be used for the raising or lowering of men when the number of broken wires in one lay of the said rope exceeds six, or when marked corrosion appears; (27) Every hoisting rope shall be treated with a suitable rope compound as often as necessary and at least once a month; (28) In no case shall a rope which has been spliced be used for hoisting purposes; (29)

Upon the drum of the hoisting engine, there shall be not less than three rounds of rope when the bucket, cage or skip is at the lowest point in the shaft or winze from which hoisting is effected. The end of the rope shall be properly fastened to the shaft or the spider of the drum; (30) Whenever a counterweight is used in a vertical shaft, it shall operate in a separate and safety enclosed compartment. The cable from the counterweight shall be attached to the drum of the hoist and not to the cage or skip; (31) When hoisting has been suspended for repairs and when hoisting has been suspended for any other purpose for a period of more than two hours, no person shall be raised or lowered until the bucket, cage or skip has made one complete trip up and down the working portion of the shaft; (32) A notice showing clearly the number of persons allowed to ride on, and the weight of materials allowed to be loaded on the cage or skip shall be posted at the collar of the

shaft. No person shall offer obstruction to the enforcement of such notice.

**Haulage.**—(33) No person shall ride upon or against any loaded car in any underground workings. In mechanical haulage this shall not apply to train crews; (34) On every level driven after these regulations are in force, on which mechanical haulage is employed, a clearance of at least eighteen inches shall be maintained between the sides of the level and the cars, or there shall be a clearance of twenty-four inches on one side.

**Protection in Working Places.**—(35) The operator shall provide and maintain an adequate supply of properly dressed scaling bars and gads and other equipment necessary for scaling; (36) The operator shall when necessary provide life-lines for the workmen and it shall be the duty of the workmen to continually wear such life-lines when working in dangerous places; (37) The use of wire ropes for climbing purposes is prohibited.

## NOTES ON INDUSTRIAL RELATIONS

### Bell Telephone Company's Employees' Stock Plan

The report of the Employees' Stock Plan of the Bell Telephone Company of Canada for 1931 shows that at the end of the year, of the 12,832 employees who were eligible to subscribe to shares of the company, 10,200 were subscribing for a total of 43,878 shares. (Some account of this plan, as it affected employees of the Bell Telephone Company in the United States, was given in the *LABOUR GAZETTE*, April, 1925, page 368). During the present depression, the price of the company's shares has fallen below \$115, which was the figure at which stock is offered to employees under the terms of the plan. In a recent statement dealing with the problem thus created for the subscribers, Mr. C. F. Sise, president of the company, said that the employees were free to decide for themselves either to continue or to discontinue the purchase of further instalments. "The Employees' Stock Plan," Mr. Sise stated, "is primarily a thrift plan by which employees are encouraged to save money by monthly deductions from pay, with the right to withdraw at any time with 6 per cent interest on the amount paid in. Should the employee allow these deposits to accumulate for the thirty-five month period necessary to purchase stock with the proceeds, interest at 7 per cent is credited if the deposits are not withdrawn and Bell Telephone Stock is delivered.

"Every employee has the right to withdraw his deposits at any time, in the same manner

as if they had been placed in a savings bank. It is to the advantage of the employee to continue to allow deductions from pay until the time arrives for the final deduction to complete purchase of the shares subscribed for. If in the final month of deduction the market quotation for Bell Telephone stock is below \$113 a share, which is the difference between \$115 and the loss of 1 per cent interest, for thirty-five months, plus broker's commission, it is obviously to the employee's advantage to cancel his subscription, receive a refund cheque from the company, and apply the proceeds to the purchase of shares through his bank or a stock broker who is a member of the Montreal or Toronto stock exchanges, on which the stock is listed. The dividends on stock purchased through a bank or a broker, cannot, of course be applied to the purchase of additional stock by assignment of dividends.

"No employee is under any obligation to purchase stock either by deductions from wages or investment of dividends. The present standing and future prospects of any employee will not be affected in the least degree by his decision as to the purchase of stock.

"Any employee withdrawing his accumulated savings under the plan at this or any time, may, under the conditions of the plan, apply forthwith for a new subscription for stock."

### Montreal Tramways Mutual Benefit Association

The annual report of the Montreal Tramways Mutual Benefit Association fund indicates that a total of \$36,490 was paid out to employees of the Montreal Tramways Company who were disabled through sickness

or injury during the year ending April 30, 1932. This total represents an increase of approximately \$1,000 as compared with 1931. The year closed with a membership of 4,521.

The gross revenue for the year amounted to \$352,505, which was an increase of \$12,333 over the previous year. This total revenue was derived from the following sources: fees and dues from members, \$151,028; allowances from the company, \$166,195; interest on investments, \$32,330; interest on bank deposits, \$993; premiums on United States funds, \$1,247, and suspense credit, \$710. During the same period expenditures totalled \$254,378—an increase of \$20,962—the main factors being: sickness and injury, \$36,489; old age pensions, \$86,508; total permanent disability pensions, \$32,784; medical attendance, \$14,400; medicine, \$2,108; withdrawals, \$173; premium group insurance, \$60,656, and management expenses, \$21,258. The net revenue for the year was \$98,126, as compared with \$106,756 in 1931. Investments made by the association yielded an average interest of 5.60 per cent, while, in addition, \$75,000 was placed on call loan at 6 per cent.

Membership in the association cost each employee on joining an entrance fee of one dollar and thereafter a contribution of \$3 per month. In return, each member is eligible for the following benefits: sickness and accident benefits at the rate of \$10 per month for six months covering disability due to sickness and to injury received while off duty; a pension of \$2 per day to members of 60 years of age and over, after 25 years of continuous service; a pension of \$1.50 a day when totally and permanently disabled; a life insurance policy of \$1,000; free medical attendance and free medicine.

The number of members now receiving old age pensions is 126, as compared with 108 in 1931. The total amount paid out in these pensions for the year was \$86,508, an increase of 25.3 per cent over 1931. The number of members receiving total permanent disability pensions is 63, an increase of 8.6 per cent. They received \$32,784 during the period covered by the report.

### Unemployment Insurance for Electrical Industry in United States

The National Electrical Manufacturers' Association (United States), at a recent meeting approved the establishment of an unemployment benefit program based upon the Gerald Swope plan (reference to the Swope plan was made in the LABOUR GAZETTE, May, 1932, page 516, and October, 1931, page 1054).

The scheme adopted by the association is applicable to 200,000 workers and is conditioned on the acceptance of it by a minimum of 60 per cent of these employees. It will include all employees who have served twelve consecutive months on either salary or wage basis, and whose full time compensation does

not exceed \$2,500 a year. Under normal conditions, and after an initial unemployment of two weeks, participating employees receive 50 per cent of their normal average earnings, not exceeding \$20 a week, for a period not exceeding ten weeks in any twelve consecutive months. Provisions for part time are incorporated in the scheme. Except when earnings are below 50 per cent of normal, participating employees contribute 1 per cent of actual wages over a five-year period, and the company makes equal contributions. Contributions must be made for six months before employees are entitled to benefits.

### Progress of Co-partnership in United States

The Industrial Relations Section of Princeton University recently published three pamphlets giving the results of special studies of company "plans" for the benefit of their workers, as follows:—

(1) *The Use of Credit Unions in Company Programs for Employee Savings and Investment.* Many progressive companies, it was found, have established emergency plans for loans to employees who have been laid off. "While such plans have aided greatly in carrying men through the depression thus far, there is much necessity for developing more permanent machinery to fill the continuing need both during depression and in more normal times."

(2) *Statistical Analysis of Twenty Employee Stock-Purchase-Plans, 1925-1932.* A report on this subject was published in 1926, the new report indicating the effects of the depression

on the employee stock-ownership plans. Of twenty such plans in representative industries five are now definitely discontinued; in five others no recent offering of stock for employee purchase has been made. In the case of two companies, steps have been taken to distribute stock under altered arrangements. Two companies have not paid dividends for two or more years, one stopped paying in 1931, and four others have passed dividends in 1932. The net effect of changing market prices on the present gain or loss to the employee purchasing stock at various times is so much affected by bonuses, interest charges or credits, dividends, and stock rights that no summary is possible.

(3) *Company Plans for Employee Savings and Investment.* This memorandum is concerned mainly with the organization of credit

unions among employees. "The credit union," it is stated, "serves a double purpose. It furnishes a means for savings at a good dividend rate and with a high degree of availability, and affords a source for borrowing at reason-

able charges. It is thus a means for the solution of two important employee problems, those of thrift and of credit. The loan phase of credit union operation is quite as important, if not more important, than that of thrift."

### New Features in Agreement in Textile Industry at Philadelphia

An account of an agreement recently concluded in the textile trade, at Philadelphia, which contains some new features, is given in *Facts for Workers*, the monthly review published by the Labour Bureau, Incorporated (New York) in its issue for May. Following a dispute between the Upholstery Weavers' and Workers' Union and a group of employers who manufacture fabrics for the upholstery trade, both parties asked the Industrial Research Department of the University of Pennsylvania to make a survey of the industry, and to submit recommendations with a view to the reform of industrial relations. The University accepted the proposal, and after six months made a report which suggested a new form of contract; this was finally accepted by both parties. In order to secure quantity production a sliding scale of wages was adopted, whereby wages were increased 15 per cent above base rates wherever orders were for 30 yards or less; for orders of between 30 and 100 yards the existing scale of wages was maintained; while for orders over 100 yards there was a reduction of 15 per cent in the wage rates. The sliding scale is explained by the fact that on short runs, where there is less competition, the manufacturers can afford to pay higher wages and charge higher prices and the weavers need higher pay because of the lack of full employment. On long runs, on the other hand, manufacturers must be in a position to produce more cheaply, while weavers can afford to work at lower rates because lower rates will be compensated for by steadier employment. "This system," it is stated, "may fail, but at least it is an inter-

esting experiment, and, we believe, one which has never before been attempted in any of the textile trades."

The practice regarding "one loom to a man" was also modified, the union agreeing to permit a weaver to operate two looms under certain conditions, no weaver, however, to be discharged because of the two-loom system. All must be retained on the payrolls with opportunities to share equally in all available work, in accordance with a sharing system that has been established. A wage scale has been set whereby a weaver should be able to earn about 10 per cent more on two looms than he could on one, so that the weavers will directly receive at least some of the benefits of the resulting economies. Incidentally the sliding scale system outlined above pertains only to single-loom operators.

Another important feature of the new agreement is the establishment of collective bargaining machinery. For the first time in the history of this industry, there will be an impartial chairman who will render final decision wherever a grievance cannot be settled by the shop committee and the immediate representative of management. The new agreements also provide for a contributory system of unemployment insurance, each employer contributing 2 per cent of his weekly payroll and each weaver 1 per cent of his wages. Hours of labour are reduced from 48 to 44 per week during June, July and August, or to 40 hours where competitive conditions permit. Night work is also to be strictly limited, if not abolished.

### INTERNATIONAL LADIES' GARMENT WORKERS' UNION

The twenty-first convention of the International Ladies' Garment Workers' Union was held at Philadelphia during the first two weeks in May. President Schlesinger, (since deceased) in his opening address, reviewed the activities of the Union from 1902, making special reference to conditions prevailing in the industry during the last two years and a half. The president expressed the view that "the only rational measure against the critical economic situation and its terrible results is

not wage cutting, but a drastic reduction of the hours of labour in every industry. The work-week and the daily hours of labour must be shortened to a point that would give a chance to every person, able to work, to have a job. And the work hours must be reduced with wages remaining the same, because in order to bring back prosperity, everybody must work and earn enough to buy back the things produced. Reducing wages because hours are reduced will not solve the problem,

and so long as the purchasing power of the workers is reduced, I am afraid we shall not emerge from the present crisis."

The report of the secretary-treasurer, covering the period, November 1, 1929, to March 31, 1932, showed total receipts, including balance brought forward, of \$1,364,020.64, disbursements of \$1,351,299.89, leaving a balance of \$12,720.15.

Resolutions were adopted as follows:—

Instructing the general executive board to carry on organization campaigns in various parts of the jurisdiction;

Abolishing referendum on election of general officers;

Protesting against deportation and persecution of aliens;

Calling for recognition of Soviet Russia;

Favouring a 36-hour, 5-day week;

Instructing the general executive board to include provisions for unemployment insurance in agreements with employers;

Favouring old age pension legislation;

Authorizing the continuance of the educational department;

Adopting a ten-dollar tax on the entire membership in order to meet, in part, pressing debts of the International;

Requiring all members of the International Union to contribute not less than five per

cent of their earnings to the strike fund of the New York Cloakmakers from the first day of the strike to the day of its conclusion;

Instructing the general executive board to uphold to the utmost of its power and resources the actions of the joint board of New York in supporting its cloakmakers;

Favouring local funds for relief of unemployed members;

Urging the adoption of State and Federal legislation for unemployment insurance, and instructing delegates to the American Federation of Labor convention to introduce a resolution to that effect;

Re-affirming a former decision in favour of a labour party and independent political action;

Recommending assistance to locals in working out plans for group insurance.

Notwithstanding the request of President Benjamin Schlesinger to be relieved of his duties, owing to ill-health, he was re-elected as president; the secretary-treasurer, David Dubinsky, was also re-elected.

[Note.—Mr. Schlesinger died on June 6, 1932, at Colorado Springs, Col., where he had gone shortly after the convention to regain his health. He is succeeded in office by Mr. Dubinsky.]

## Ontario and Quebec Conference of Typographical Unions

The Ontario and Quebec Conference of Typographical Unions was held at London, Ontario, June 27-28, with delegates present from the larger centres of the jurisdiction. Mayor Hayman extended a welcome to the delegates on behalf of the city, and in his remarks, he stressed the point that though many changes may have to be made in the economic system, they should be brought about in an orderly manner. President Apsey of the local typographical union also welcomed the delegates.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, strongly advocated contributory unemployment insurance as a help in stabilizing the workers income. He was in favour of a reduction of hours commensurate with the advance of machinery.

During the meeting a declaration was made that not one union printer in Canada or the United States had yet applied for city relief. That was a record, delegates claimed, enjoyed by few other organizations of its kind. The typographical unions had taken steps to care for their unemployed.

One of the interesting features of the convention was the awarding of prizes to the apprentices who had submitted the best specimens of their work during the past year. These competitions, it was pointed out, are designed to assist beginners and help in turning out competent printers.

Among the resolutions adopted were the following. (1) Endorsing the principle of contributory unemployment insurance; (2) Urging the placing of employees of the Government Printing Bureau under the Civil Service Act in respect to the right to a superannuation allowance; (3) Advocating the establishment of an organized local labour press under the authority of a competent body connected with the trade unions.

Officers elected were: President, William Lodge, Ottawa; First vice-president, G. W. Schmitt, Kitchener; Second vice-president, Hugh S. Bentley, Hamilton; Secretary-treasurer, Ernest J. Teague, Montreal.

Toronto was selected as the 1933 convention city.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Mr. H. B. Butler Appointed Director of International Labour Office

At a meeting of the Governing Body of the International Labour Organization on July 2, Mr. Harold Beresford Butler, C.B., was elected as Director of the International Labour Office, in succession to the late Albert Thomas, whose death occurred at Paris in May (LABOUR GAZETTE, May, page 477). The votes cast in favour of Mr. Butler included that of the Government Representative from Canada, Dr. W. A. Riddell, and that of Mr. Tom Moore, President of the Trades and Labour Congress of Canada, one of the members of the Labour Group on the Governing Body, who was represented at the meeting by Mr. James Simpson.

Mr. Butler had occupied the position of Deputy Director since the inception of the work and brings to his new position the advantage of thirteen years' close connection with the Organization, and an intimate acquaintance with labour legislation in all parts of the world and with the leading figures in the field of labour and industry and of social affairs in all the principal countries, including Canada.

During his term of office as Deputy Director, Mr. Butler visited Canada and the United States on three occasions for the purpose of studying labour questions on this continent. The impressions he received during these visits were noted in the LABOUR GAZETTE, November, 1930, page 1300; September, 1927, page 985.

The new Director was born in England in 1883. He had a distinguished academic career, and was a Fellow of All Souls College, Oxford. Entering the British Civil Service in 1907, he served successively in the Local Government Board and the Home Office, and in 1910 acted as secretary to the British delegation at the International Conference on Aerial Navigation. He became secretary to the Foreign Trade Department of the Foreign Office in 1916, and in the following year was Assistant Secretary of the Ministry of Labour, becoming Principal Assistant Secretary in 1919. He served as Assistant General Secretary of the Labour Commission at the Peace Conference in 1919, and as Secretary General of the First International Labour Conference at Washington in 1919.

### "I.L.O." Exhibit at Toronto Exhibition

The International Labour Organization has arranged with the Department of Labour of Ontario for the placing of a special exhibit at the Canadian National Exhibition to be held

at Toronto towards the end of the present summer. The exhibit will include panels illustrating the scope of the work of the Organization and of its legislative and scientific undertakings, with an electrical display showing the progress of ratifications of Draft Conventions and Recommendations concerned with children's work, etc. The publications of the Office will also be on exhibition. Similar displays have been made at European expositions, and have served to diffuse knowledge of the systematic study that has been given by the Organization to the problems of the day, and of the measures already taken, with the co-operation of the member States, towards establishing standards for labour conditions throughout the world.

### The I.L.O. Year Book, 1931

The International Labour Office has published an international survey of social policy and progress for 1931. This publication, which appeared for the first time last year under the title of the *Annual Review*, is an off-shoot of the Report presented annually to the International Labour Conference by the Director of the Office. In 1931 the report itself was lightened of documentary detail, in order the better to focus attention on the broad aspects of a few paramount problems and serve as a pivot for discussion in the Conference. The detailed material which had previously formed the background of the Report was published separately, in a form more convenient for rapid reference. For its second year of issue, this work appears under a new and more distinctive title—the *I. L. O. Year-Book*. It is designed to provide for Governments, employers, workers, educationalists, and all others interested in industrial and labour questions, a compendium of the principal events and developments during 1931 in the realm of economic and social affairs. It presents, in a condensed and orderly fashion, all the main facts relating to the activity of the International Labour Organization and to the wide range of problems with which the Organization is concerned, summarizing the national and international legislation of the year and bringing out the trend of social policy, problem by problem and country by country. There has been no change in the general scheme of the work. Certain chapters have been somewhat compressed, in order to keep the volume within the limits of handiness. On the other hand, it has been found necessary to devote more space to the economic situation and its social repercussions—the chief theme, in present circumstances, of any such

work—and the volume is consequently a little larger this year than last. The International Labour Office in its weekly publication, dealing with the issue of this volume, expressed the hope that it "will prove of real utility to those who wish to know how the various countries of the world are dealing with their common and their special economic and labour problems, and to what extent social progress persists in the face of financial difficulties and trade depression."

Part I of the volume deals with the general activities of the International Labour Organization, its Member States, the Organization at work, the International Labour Conference, the Governing Body, the International Labour Office and relations with the League of Nations and with employers' and workers' organizations; also with international information and with labour legislation adopted to meet the requirements of various Conventions and Recommendations of the International Labour Conference.

Part II, entitled "The Social Movement", deals with the economic situation, conditions of work in the various branches of industry, social insurance, wages, unemployment, migration, workers' living conditions and workers' general rights. Reference is made in this part to the change of policy in Canada under which the Dominion Government has assumed seventy-five per cent of the cost of old age

pensions, also to the introduction of the new Workmen's Compensation law of the Province of Quebec.

The chapter on Wages includes index numbers of money wages for Canada in agriculture, mining and other industries; also index numbers of the cost of living in Canada; Chapter 5 includes statistics in relation to unemployment in Canada as well as to other countries; also statistics of overseas migration. In later chapters reference is made to the granting of a Federal subsidy towards vocational education in Canada and to legislation in the Province of Quebec increasing the powers of trade unions.

### Convention Concerning Employment of Women During the Night

The Council of the League of Nations, in conformity with a request received from the Governing Body of the International Labour Office, decided on May 9th to request the Permanent Court of International Justice to give an advisory opinion upon the following question: "Does the Convention concerning the employment of women during the night, adopted in 1919 by the International Labour Conference, apply in the industrial undertakings covered by the said Convention to women who hold positions of supervision or management and are not ordinarily engaged in manual work?"

## Annual Statistics of Fruit Production in Canada, 1931

The Dominion Bureau of Statistics has published in summary form a final report of the estimated production and value of commercial fruits in 1931, as compared with the finally revised estimate for 1930. Valuations have been based on the prices reported to have been received by growers at shipping points.

The total production of commercial apples in Canada for the year 1931 is estimated finally at 3,731,950 barrels of the value of \$8,863,797, as compared with 3,419,327 barrels, value, \$11,082,796, the finally revised estimate for 1930. The average value per barrel in 1931 is \$2.38 as compared with \$3.24 for 1930. Of the other fruits, the estimated commercial production and value for 1931 are as follows:

Pears, 396,150 bushels; \$447,782; \$1.13 per bushel. Plums and prunes, 253,784 bushels, \$316,428; \$1.24 per bushel. Peaches, 866,233 bushels, \$1,173,654; \$1.32 per bushel. Apricots, 49,900 bushels, \$82,335; \$1.65 per bushel. Cherries, 230,607 bushels, \$546,527; \$2.37 per bushel. Strawberries, 17,027,363 quarts; \$1,691,471; 9½ cents per quart. Raspberries, 5,573,362 quarts; \$822,362; 15 cents per quart. Grapes 50,830,000 pounds; \$813,280; 1½ cents per pound.

The total value of the commercial fruit production of Canada in 1931, according to the estimate is therefore \$14,756,636, as compared with \$18,165,276 in 1930. The total values by provinces are as follows: Nova Scotia \$2,851,881 (\$2,898,394); New Brunswick \$206,050 (\$175,250); Quebec \$911,545 (\$1,001,265); Ontario \$5,894,817 (\$6,493,173); British Columbia \$4,894,143 (\$7,589,668).

The Industrial Accident Prevention Associations of Ontario, in a recent bulletin, reminds employers "that the regulations of the Workmen's Compensation Board call for the provision of first aid equipment in all cases by the employer under compensation. The employer is supposed to provide First Aid treatment and is to supply medical aid treatment where necessary. Employers generally are now reminded of the necessity for careful attention to medical aid costs. In too many instances it has been found that what is properly First Aid work has been done outside the plant at an expense to the Accident Fund. Employers must find the money to pay for compensation and medical aid, and the question of control is largely within their own hands."

## CENSUS OF UNEMPLOYMENT IN CANADA, 1931

### Number of Wage-earners Not Working on June 1, 1931

THE 1931 Census taken as of date June 1, included a series of questions in the population schedule with the purpose of throwing light on the unemployment situation (LABOUR GAZETTE, May, 1931, page 545). These questions were grouped under two main categories for each person designated as a "wage-earner": (1) whether at work on June 1, 1931, and if not, the cause of unemployment; (2) the total number of weeks unemployed, and the allotment of these weeks to specific causes for the twelve months ended June 1, 1931. The final compilation of the data obtained in this way will present a complete analysis of the situation from a number of points of view, in addition to the primary facts as to the amount and cause of unemployment by occupations affected, racial origins, nationalities, educational status, and the various other facts obtained on the Census schedule. In view of the current importance of the question, however, a compilation of certain of these data has been made in advance of the final analysis just mentioned, and the results have been published by the Dominion Bureau of Statistics. The nature of this preliminary compilation is as follows:—

The compilation was extended only to cities and towns of over 5,000 population, numbering 137 in all. For each of these a summation was made, first of the number of persons, twenty years of age and over, designating themselves as "workers," and secondly, the number of these not at work on June 1. A one-in-ten sample of the workers 19 years and under in thirty of these major cities was taken in order to estimate the number of workers in this age group.

In the tables, "wage-earners" are treated under two main divisions, viz., male and female, and each of these divisions is presented under two age classifications, viz., 20 years of age and over, and under 20 years. The group of major importance from an employment standpoint are males 20 years of age and over, as these constitute more than two-thirds of all wage-earners and support the largest number of dependents.

The wage-earners of both sexes under 20 constitute a serious economic problem, but the data for this group are somewhat indeterminate, because they do not include a

large number who would in normal times be of working age, but who had not yet been employed, hence could not be "unemployed." In view of this it is probable that data on adult workers alone are more reliable as a guide to the unemployment situation than are data for all ages.

In considering the data shown in the following tables, the question arises as to whether unemployment as on June 1, or any other fixed date, is or is not representative of the unemployment of the year. It is regarded as fairly representative of the year in the cases of (1) large aggregates, such as the totals for all cities; (2) large cities where the industries are so diversified that unemployment due to any one industry is not a large fraction of the total unemployment; and (3) smaller cities or towns with stable and diversified industries. On the other hand, June 1 is not representative in cities, especially small cities, the majority of whose workers are engaged in one type of industry, particularly if the industry has a seasonal tendency. In general, for cases of unemployment due to such causes as "temporary lay-off," strike, etc., June 1 or any other fixed date is not representative.

The scope of this bulletin, as above stated, is confined to towns of 5,000 population and over, of which the total population is 4,290,463, comprising 2,124,221 males and 2,166,242 females. The wage-earners, twenty years of age and over in these localities numbered 1,053,409 males and 291,293 females. Of the male wage-earners 229,792 or 21.8 per cent were "not working" on June 1, 1931, and of the female wage-earners 24,995 or 8.5 per cent were similarly affected. A summary by provinces of the situation as of June 1 is given in Table I.

In addition to the adult workers it was estimated by sample (Table II) that there are 192,144 wage-earners under 20 years of age in Canadian towns and cities of over 5,000, of whom 101,897 are male and 90,247 female. Of these, 20,984 males and 11,103 females were "not working" on June 1, 1931.

The Canadian total of wage-earners both sexes and all ages in towns over 5,000 population (Table III) reached 1,537,474, of whom 1,155,304 are male and 382,170 female. The aggregate of wage-earners not working on June 1, 1931, is 286,874; 250,776 of these are male and 36,098 female.

## PRELIMINARY REPORTS ON CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS, 1931

### Winnipeg

A PRELIMINARY tabulation for the Census of Merchandising and Service Establishments taken by the Dominion Bureau of Statistics in 1931, shows a retail business for the city of Winnipeg (population, 1931—218,785) during the year 1930 of more than \$140,000,000. There were 2,456 retail stores with sales of \$128,563,600 and 1,041 service establishments with gross receipts of \$12,044,000. The 2,456 retail merchandising establishments employed 14,788 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$16,392,900 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$14,192,200.

The general merchandise group (which includes department stores) had the largest volume of business with sales of \$63,216,900. The 79 stores which made up this group employed 7,001 persons and paid them \$8,003,500 for the year.

The largest number of stores was reported for the food group where 1,047 establishments had sales of \$15,293,100. In addition to the sales made by these food stores, bakeries and dairies which report to the Census of Industry had retail sales of \$4,859,774 in 1930. Grocery stores were most numerous in the food group, followed by confectionery and candy stores.

The automotive group is third in size, both in the number of establishments and amount of sales. The 217 establishments in this field had sales of \$11,781,400, of which 24 dealers in motor vehicles reported \$7,910,900. There were 1,225 employees in this group whose salaries totalled \$1,595,800.

There were 215 establishments in the restaurant group employing 1,523 persons, paying \$1,194,000 as salaries and wages and having receipts of \$7,987,400.

The apparel group had sales of \$6,203,400. The 259 stores employed 824 persons who received \$972,700 as salaries and wages. In the lumber and building material group were 81 establishments reporting sales of \$5,177,900, salaries and wages of \$627,100, and 536 employees.

In the service field there were 1,041 establishments in Winnipeg and their receipts for 1930 totalled \$12,044,000. These service establishments employed 3,794 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$3,885,400 as salaries and wages. The largest receipts were reported for

the amusements group, in which the movie houses and theatres had receipts of \$3,055,000 out of a total of \$3,992,300. The 92 establishments in the amusements group employed 1,068 persons in 1930 and paid them \$1,060,600.

The domestic service group came second in the amount of receipts with \$2,512,300, to which the 92 laundries contributed \$1,175,100. the pay-roll for this group was \$1,109,700 and the number of employees 1,093.

Other important service groups are the repair and service shops with \$969,600 receipts, 250 employees and a pay-roll of \$238,800; the personal service group with \$803,400 receipts, 299 employees and a pay-roll of \$272,000. In this group there were 211 barber shops reporting a business of \$564,900. The cartage and storage business in Winnipeg amounted to \$1,225,400 with 55 establishments reporting 449 employees and salaries and wages of \$488,900.

### Ottawa

A preliminary tabulation for the Census of Merchandising and Service Establishments shows a retail business for the city of Ottawa (population, 1931—126,872) during the year 1930 of more than \$61,000,000. There were 1,501 retail stores with sales of \$56,875,600 and 579 service establishments with gross receipts of \$4,619,600. The 1,501 retail merchandising establishments employed 7,193 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$7,900,800 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$10,036,000. The general merchandise group (which includes department stores) had the largest volume of business with sales of \$13,786,000 but the greatest number of stores was in the food group for which the sales were \$12,088,100. In addition to the sales made by the 675 food stores, bakeries and dairies which report to the Census of Industry had retail sales of \$4,925,400. The 141 establishments which make up the automotive group reported sales of \$8,223,800 in 1930.

In the service classification there are 579 establishments with gross receipts of \$4,619,600. These establishments employed 1,442 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$1,424,900 as salaries and wages. The amusements group reported receipts of \$1,098,400 of which the theatres gave \$884,000. Barber shops are the most numerous of the service establishments with 120 reporting while shoe repair shops come next with 89 establishments.

## THE RELIEF SETTLEMENT PLAN OF THE DOMINION GOVERNMENT

BY the end of June agreements in connection with the Relief Settlement Plan of the Dominion Government had been signed by the provinces of Nova Scotia, New Brunswick, Quebec, Manitoba, and Saskatchewan, and were being negotiated with the provinces of Alberta, British Columbia, and Ontario.

Under the terms of these agreements the Dominion Government will contribute as a non-recoverable expenditure, one-third of an amount not to exceed \$600 per family for the purpose of providing a measure of self-sustaining relief to families who would otherwise be in receipt of direct relief, by placing such families on the land. It is provided that the remaining two-thirds of the expenditure will be contributed by the province and the municipality concerned, as may be decided between the province and the municipality.

The Provincial Government is responsible for the administration of the Relief Settlement Plan, including the location and inspection of farms, and the selection of suitable families, who must be physically fit and qualified in other respects. No part of the cost of administration or supervision may be deducted from the maximum amount of \$600 to be set aside for subsistence and settlement of each family, nor may any part of the total expenditure

be utilized for the purpose of acquiring or renting land.

Each province participating in the plan agrees to set up an Advisory Committee upon which there shall be included representatives of the Dominion Land Settlement Branch, and the Colonization Branch of the Canadian Pacific Railway Company and the Canadian National Railways.

Provision is made for the Dominion contribution to be paid to the provinces progressively as expenditures are made by the province and municipality, and a proportion of the total expenditure is to be withheld to provide subsistence if necessary during the second year.

The plan contemplates the utilization of Crown lands and of farms owned by municipalities or private owners, which may be acquired on favourable terms and without immediate cash payments.

The agreements with the provinces provide that all families who may be assisted under the terms of the agreement shall be residents of Canada, and shall be selected from those who would otherwise be in receipt of direct relief. The agreements further provide that the selection shall be made without discrimination by reason of political affiliation, race, or religious views.

## STATE LEGISLATION FOR UNEMPLOYMENT RELIEF IN UNITED STATES

THE legislation enacted in 1931 by various States for the relief of unemployment in the United States is outlined in the *Monthly Labour Review* (Washington), June, 1932, as follows:—

### Direct Aid

*Illinois.*—Many emergency bills for the relief of unemployment were passed. Among the measures was one appropriating \$20,000,000 for the relief of the needy residents of the State; the Illinois Emergency Commission was formed to handle the fund. The money is to be raised by a tax assessment on property, unless the voters decide at the next State election in November to approve a bond issue for \$20,000,000.

*New Jersey.*—The special session of 1931 created an emergency relief administration and appropriated approximately \$10,000,000. The State director of this administration (appointed by the Governor) is authorized to appoint a county director of relief in each county. Funds for poor relief are to be

granted on a population basis, and local political subdivisions are to be reimbursed for 40 per cent of the cost of dependency relief. Other acts passed authorize local authorities to issue bonds, and provide for the institution of public works to relieve the emergency.

*New York.*—In its special session of 1931 the Legislature created a temporary emergency relief administration and appropriated \$20,000,000. Home relief (defined as food, fuel, shelter, clothing, light, medicine, and medical attendance at home) and work relief are provided.

*Ohio.*—Municipal corporations, townships, or counties were authorized to borrow money and to issue bonds to cover deficiencies in poor relief funds caused by the abnormal unemployment conditions. Proceeds from the sale of the bonds are to be paid into an emergency poor relief fund.

*Oklahoma.*—The Legislature appropriated the sum of \$300,000 for the purpose of providing food, shelter, fuel and clothing for the destitute and suffering citizens of the

State. The same act created an emergency relief board.

*Pennsylvania.*—The legislature appropriated \$10,000,000 to the department of welfare for the various political subdivisions charged with the care of the poor. According to the preamble of the act, "present conditions of unemployment aggravate the normal situation facing public authorities charged with the care of the poor, impose a burden which local government is unable to bear, and demand the exercise of the police power of the Commonwealth for the protection of public health, safety, morals and welfare, and the assumption by the Commonwealth of its governmental duty to care for the poor."

*Rhode Island.*—An unemployment relief commission was created during the special session of 1931. The law authorized cities and towns to borrow money for unemployment relief and to issue notes, and appropriated \$1,500,000 to be used for the purchase of the notes by the State.

#### Provision for Public Works, Etc.

In addition to the direct aid afforded by several States, other States have appropriated

money to help to relieve the unemployment situation by the employment of additional persons and by the construction of public works. In Massachusetts, over \$3,000,000 was appropriated for the employment of additional persons as a measure of relief during the emergency. For such purposes appropriations totalling \$3,711,140 were authorized by the legislature in 1931. In addition, \$8,500,000 was provided for by a bond issue, of which amount the department of public works was authorized to expend \$7,000,000 for the acceleration of work on State highways and \$1,500,000 for the erection of a State building.

Wisconsin authorized direct relief to the poor by the towns, villages, and cities. Several other states (Arkansas, Louisiana, Minnesota, Missouri, South Carolina, and West Virginia) made provision for emergency relief caused by disasters and unemployment.

Certain other States provided for the appointment of investigative commissions, namely, California, Maryland, Minnesota, Tennessee, and Wisconsin.

## ONTARIO'S EXPERIENCE OF RELIEF WORKS AS A REMEDY FOR UNEMPLOYMENT, 1930-32

*Address by Professor H. M. Cassidy, Department of Social Science, Toronto University, before the Canadian Political Science Association, May, 1932.*

AT a meeting of the Canadian Political Science Association, held at Toronto in May, Professor H. M. Cassidy, of the Department of Social Science, Toronto University, read a paper entitled: "Relief Works as a Remedy for Unemployment, as illustrated by Ontario Experience, 1930-32." At the outset the speaker referred to the change in public policy that was indicated by the Relief Act adopted by Parliament at the recent session. The new Act makes provision for direct relief, whereas the Acts passed at the two previous sessions provided for a system of relief through public works. "Does this indicate that the method of relief works has proved a complete failure?" Professor Cassidy asks, and the latter portion of his address, which follows, is a discussion of this question.

#### Experience with Relief Works

There is no time to-day to undertake a detailed discussion of Ontario's experience with relief works. May I therefore, merely set

down in summary fashion what I think may be said in favour of the experiment, and what may be said against it. The observations that follow are based largely upon first-hand investigation in 15 or 20 of the leading municipalities of the province.

#### Favourable Results

I think that the programs of the past two years have the following points to their credit:—

1. They provided a good deal of employment, chiefly for married men who were, in the majority of cases, desperately in need of it. In 1930-31 total disbursements in relief wages probably amounted to about \$10,000,000 or some 60 per cent of total expenditures. This amount was distributed in small sums among a large number of men, perhaps 50,000 to 100,000.<sup>1</sup> From the incomplete figures available it appears that relief wage disbursements for 1931-32 may amount to \$15,000,000 or more. The total number of men given employment

<sup>1</sup> An accurate figure for the province as a whole is not available, the figure of 43,000 reported by the provincial authorities to the Dominion Unemployment Relief Branch being only an estimate that is undoubtedly far too low.

on relief works throughout the province from September, 1931, to January 31, 1932, was 89,500 according to provincial reports to the Dominion Unemployment Relief Branch, while the number employed on government road projects alone, up to April 1, was more than 40,000. In 12 of the larger municipalities for which accurate figures are available the average earnings per man engaged amounted to \$98.52 during the season 1930-31. While average earnings were generally small they no doubt supplemented the private resources of many families sufficiently to enable them to subsist without applying for direct relief. For others who drew food and fuel from the direct relief offices their earnings provided indispensable ready cash for the payment of rent, gas, water and light bills which were generally not provided for by public charity.

2. No doubt relief works have done something to maintain the morale of the unemployed. Municipal officials state that the men with whom they have had to deal have much preferred wage work to direct relief—which is merely a polite name for poor relief. There is universal testimony that prolonged idleness and subsistence on charity exert deteriorating effects of the most serious nature upon the workers. Careful students of the problem generally agree that relief works have had effects also, but so far as I can judge from the opinions expressed by many persons in close touch with the Ontario programs these have not been particularly noticeable in most of our cities. On the other hand there is much testimony that the opportunity of relief employment has sustained the spirits and self-respect of the better class of workmen among the unemployed. The government road projects in the North, which offered much more regular work than most of the municipal undertakings, appear to have been particularly effective in this respect. Another good characteristic of relief work is that it has to a considerable extent been available for respectable working men who were not completely destitute and who would not apply for or would not be entitled to direct relief, but who were surely deserving of assistance before their reduction to utter destitution.

3. The programs have left in their wake many useful public improvements. By no means all of the works fall in this category, but those that do represent tangible assets which have been created by the unemployed for the service of the community in the future.

4. Relief work schemes have undoubtedly provided a certain stimulus for trade and industry in general which would have been lacking had they not been undertaken. Expend-

itures for materials, such as sewer pipe, have created employment as well as expenditures made directly for labour, although the former item is not directly reflected in figures of relief employment. Many economists feel that it is the part of wisdom for governments to spend generously upon capital enterprises in times of depression and that by so doing they counteract the influences of contraction in private business. There is some evidence that Canadian business activities have not been curtailed quite so much as those in the United States during the last two years. Perhaps our extensive programs of public construction have provided a cushion for our descent into the valley of economic humiliation which has been lacking in the United States, where the Federal Government and most of the States have done little or nothing to set in motion relief works.

### Objections

On the other side of the ledger I think that we are forced to list a number of objections to our works programs—

1. They have been insufficient to provide nearly enough jobs for all the unemployed. For the 37,000 men engaged on relief works in 12 leading municipalities during the season 1930-31 the average amount of employment per man ranged from 11 days in Toronto to 45 days in Port Arthur, while the average for the 12 municipalities was 21 days. During the past year the average amount of work per man engaged on municipal undertakings has probably been even less than in 1930-31. The number of single men registered as unemployed in Southern Ontario last August under the government registration scheme was 57,551, yet the number given jobs on government road project was only about 7,000 or 12 per cent. Both the number and the proportion taken from Northern Ontario, it should be noted, was very much greater. In spite of the fact that the program for 1931-32 has been very much larger than that of the preceding year it has not increased sufficiently to keep pace with the mounting tide of unemployment, so that growing numbers of the unemployed have been forced to rely for subsistence upon direct relief. Public expenditures on direct relief throughout the province were about \$4,000,000 during 1930-31 (September to September), while expenditures of \$11,000,000 to \$12,000,000 are in prospect for 1931-32.<sup>1</sup>

2. In general the Ontario schemes have provided only one class of work—pick and shovel labour. This was particularly true in

<sup>1</sup> Estimates based upon figures for leading municipalities and government subsidies. No official totals for the province are available.

1930-31, for the building projects of this past year have made openings for a limited number of skilled craftsmen. The fact that men of diverse trades were herded together in the relief gangs was good neither for the work nor for them. A good many were not in proper physical condition to do the work of navvies, or were unsuitable for it in other ways. It is obviously impossible for public employment schemes of an emergency nature to provide each unemployed person with a job in his own trade. But it is a serious mistake to assume that the problem of unemployment can be met by providing everyone with the opportunity of doing the lowest common denominator of work, navvying. Even this demands a certain amount of capacity, training, experience and skill. "It is a fallacy," said the Minority Report of the British Poor Law Commission in 1909, "to assume that there is such a thing as work, in the abstract, or of an undifferentiated character. The work that is of any use in the world is always the doing of some specific service." It may be questioned also whether it is reasonable to put men of other trades to work at navvying jobs at times of stress. This means, almost inevitably, that there is less work for common labourers, either at present or in the future, and that distress due to unemployment, which is chronically severe for them, may be made even worse.

3. A good many of our relief work projects have been of dubious value to the community. In some places work for work's sake has been a fetish with municipal officials, as in one Ontario city where men were given the task of levelling off a knoll and filling in a hollow, a job which the municipal engineer stated would never have been undertaken but for the need to create work. In other places many jobs were done that would not have been undertaken normally for three, five or ten years. Thus sanitary sewers and watermains have been installed and roads have been graded on streets where there is only an occasional house. It is difficult to say what proportion of municipal projects fall in this category. Certainly not all, for a great many have been well justified, from the standpoint of ordinary civic needs. But a substantial number may be classified as civic luxuries or non-essentials, to say the least. The prosecution of such works, of course, has created a burden of unproductive debt for the community to bear. In many places anticipation of future needs in the way of sewers, watermains, etc., has gone so far that it is practically impossible to find further works of this nature that can be termed useful.

4. Typically the relief method of construction has been wasteful and inefficient, as com-

pared with ordinary commercial practice. Municipal engineers whom I have questioned have been unanimous on this point, and have submitted estimates of excess costs on various relief jobs undertaken during 1930-31 ranging from 5 per cent to 300 per cent. Specific figures for a few typical undertakings are submitted below:—

City	Job	Cost of relief project	Estimated normal cost	Increased cost
		\$	\$	%
A	Flood prevention...	200,000	100,000	100
B	Sewer.....	260,000	114,000	128
C	Street grading.....	15,000	12,000	25
D	Road improvement.	11,466	6,000	91

Although information is not at hand for making an adequate estimate it seems probable that expenditures on the 1930-31 municipal program must have been at least 40 or 50 per cent higher than normal costs, on the average.

There were several major reasons for the greater expense of these municipal works. For one thing, hand labour was generally employed, even where machinery could have been used to better advantage. Steam-shovels and trenching machines were commonly laid up, to be replaced by pick and shovel brigades. Secondly, the work was done mainly during the winter months, when climatic conditions were unfavourable for efficiency. Still more important, according to the engineers who were interviewed, the relief workers were not nearly so competent as regular men. A further factor was the waste of time and confusion occasioned by the personnel of the gangs changing every few days.

5. Relief work has proven distinctly expensive as a method of relieving the unemployed. About a dollar of expenditure was required in Ontario municipalities in 1930-31 to provide a man with 60 cents in wages, and even more this past year. There would surely be no objection to this, on financial grounds, if the community were getting a dollar's worth of work on necessary enterprises which it would have to carry on anyhow at some time or other in the near future. But, as it has been pointed out, this has not always been the case. In a fair number of instances, it appears, it would have been economical to have distributed the amount paid out in relief wages as direct relief and to have provided for the construction of civic works later, as they were needed, by ordinary methods. In another way, too, the work plan has been relatively expensive to the public authorities. Applicants for work are usually much more numerous than applicants for direct relief, so

that provision has to be made for assistance in a greater number of cases. The view has become common that direct relief is cheaper than relief work, and this is undoubtedly correct in the short run. It may also be true in the long run, under conditions of the sort that have been mentioned.

6. The fact that our relief schemes have been so largely initiated and administered by the municipalities has given rise to a variety of problems. Eligibility rules, wage rates, and amount of employment offered have varied from place to place, so that there has been no uniformity of treatment for the unemployed. The burden of providing assistance through work has been distributed most unequally among the municipalities, a number of those with heavy unemployment and tax rates that are already too high having struggled to do a good deal in this direction, while others, much better able to finance schemes, have made only moderate expenditures.

7. During the present year the problem of financing work plans has become serious for all branches of government, but particularly for the municipalities. Since Canada's departure from the gold standard last autumn the financial markets have been most unfavourable for the flotation of bonds and debentures. At the same time the banks have shown serious concern over governmental overdrafts and in many instances have refused municipalities further accommodation, except on condition that they curtail expenditures. Tax collections have fallen seriously, particularly in those municipalities that have the largest proportion of unemployment. At the very time when there is the greatest need for public assistance to the unemployed the problem of meeting that need through borrowing short or long term funds or through raising money by taxation has become almost insuperable for many municipalities. The Dominion and provincial governments are also finding the financial situation difficult.

### Conclusions

The weight of this argument, it appears, is definitely against relief works as they have been conducted in Ontario during the past two years. Certainly it may be said that Ontario has not found relief work a very successful remedy for unemployment. Had we been aware of English experience we might not have been so optimistic, two years ago, that the problem of unemployment could be solved by digging sewers—or even by building the Trans-Canada highway. Investigators for the English Poor Law Commission reported in 1909 that “municipal relief works have been in operation for twenty years, and must,

we think, be pronounced a complete failure. . . . The evidence we have collected seems conclusive that relief works are economically useless. Either ordinary work is undertaken, in which case it is merely forestalled and, later, throws out of employment the men who are in the more or less regular employ of the councils, or else it is sham work which we believe to be even more deteriorating than direct relief.”

I am not prepared to go so far in condemning relief works. I think that the programs of many Ontario cities have proven of real service in meeting the unemployment situation and have been preferable to direct relief. They have had, at least, a limited usefulness, particularly during the earlier part of the depression. To state this is not to minimize the objections that have been listed above. It is merely to say that relief works were much better than nothing at all or better than a bad alternative. As for the provincial program of the past year, it has not been open to many of the defects of the municipal schemes and I believe that there is a good deal to be said for carrying it on further rather than abandoning it.

No doubt a number of the deficiencies of our works experiment might be avoided were our government to undertake it again, having learned by experience. But I suspect that we shall find the method of relief works disappointing if we turn to it again in a later depression. For the nature of relief works is that they are set under way in a hurry to meet an emergency, without time for careful planning. Most of the difficulties that have been experienced in Ontario flow from this characteristic. The financial problem of our local governments are a reflection, in large part, of their expansive spending on public improvements in preceding fat years, without thought for the lean years that would follow. Their lack of suitable projects for relief purposes arises largely from the same cause. Much of the inefficiency that has characterized the schemes may be attributed to faulty administration incidental to the performance of a rush job in a great emergency, without the development of careful policies of selecting and directing workers.

If relief works are to be really successful during a depression, it appears, they should be planned well in advance, in the years of prosperity. But if this is done, they cease to be relief works. They become rather useful undertakings that are postponed until the period of depression and that may be constructed, by suitable workers, no more inefficiently than works done in good years. There is much evidence that a public construction program of this sort would do a good deal to counteract the fluctuations of private business.

## Union of British Columbia Municipalities and Unemployment

The Union of British Columbia Municipalities, at the annual meeting held at Nelson during the last week in June, unanimously adopted eight resolutions on the subject of unemployment, as follows: (1) declaring that relief is a federal obligation; and (2) that Ottawa should assume full cost in connection with unmarried of both sexes and transients; (3) condemning direct relief and urging public works instead; (4) urging retention of camps for single men; (5) proposing that the Provincial Government should apply for help under the so-called federal "blank cheque"; (6) demanding a clear-cut statement of policy from the Provincial Government; (7) proposing that the Provincial Treasury should finance municipal relief where the banks will not loan; and (8) proposing that the government should take over the business of relief in the case of municipalities absolutely unable to carry it on.

These resolutions were based on a statement of "twelve facts," which had been drafted by a special committee of the Union to consider the unemployment situation in the Province. These "twelve facts" were as follows:— (1) The number of unemployed is steadily increasing; (2) Clothing, boots and shoes are becoming necessary; (3) Owners of property now housing the unemployed, owing to continued non-payment of rent, are being forced to take

eviction proceedings, thereby placing the responsibility of providing shelter upon the municipalities; (4) Electric light is being cut off owing to non-payment; (5) The many organizations working to relieve distress have exhausted the supply of second-hand clothing, shoes, etc., that have been available up to the present; (6) Many municipalities have been carrying on direct relief through credit given them by local storekeepers, but storekeepers now find it impossible to continue giving this credit; (7) Nearly all municipalities find they are exceeding their budgets for direct relief; (8) The banks will no longer extend the usual credits to some municipalities; (9) We are convinced that throughout the province municipal tax rates have reached their limit, and in fact in most cases are heavier than the taxpayer can bear; (10) An ever-growing proportion of lands are reverting to the municipalities; (11) The inevitable result of reducing to any considerable extent the amount of relief now being granted the unemployed will result in great hardships and consequent unrest, leading to riot and possible loss of life and destruction to property; (12) Up to the present the municipalities have been able to a very considerable extent to keep the unfortunate unemployed from resorting to extreme measures and to keep the political unrest from spreading.

---

## Unemployment Conference of Mayors of Western Canadian Cities

A conference of the mayors of cities in western Canada was held at Winnipeg early in July to consider unemployment problems. Mayor Webb of Winnipeg presided, those attending being Mayor McCrae of Regina, Mayor Underwood of Saskatoon, Mayor Davison of Calgary, Mayor Knott of Edmonton, Mayor Sharpe of Portage La Prairie, Mayor Robertson of The Pas, Alderman McCrae, representing the Mayor of Vancouver, and Reeve Pritchard of Burnaby, B.C.

The meeting decided to invite Premier Brownlee, of Alberta, to call a conference of premiers of the western provinces and of the heads of urban municipalities, for the purpose of drawing up a uniform relief program. The opinion was expressed that the municipalities were at present required to bear too heavy a burden, and that a new allocation should be

made of the cost of unemployment relief as between the Dominion, provincial and municipal governments. The conference considered that the Dominion Government should bear the entire cost of the relief of single men, and 65 per cent of the cost for married men, the share of the provinces in respect of married men to be 25 per cent, and that of the municipalities 10 per cent of the total cost. At the present time the cost is equally divided between the three governments. It was further suggested that the cost of administration should be equally divided.

A resolution was adopted inviting the Federal Government to appoint a Commission to investigate the unemployment situation with a view to "relieving the already over-burdened cities and municipalities."

## Increase in Unemployment Throughout the World

In its issue for July 4, *Industrial and Labour Information* (Geneva) gives recent statistics of unemployment in various countries. The figures show a general increase over those of last year, the only exceptions being Finland and Poland, where unemployment has decreased by 1 per cent and 3 per cent respectively. Among the countries which show more than 100 per cent increase in the amount of recorded unemployment are Chile, Denmark, France, Latvia, the Netherlands and the Saar Territory. Low percentage increases (less than 20 per cent) are shown in Australia, Germany, Great Britain, Japan, New Zealand and Sweden.

As compared with the similar figures that were published three months ago, increases in unemployment are noted in Czechoslovakia (from 11.3 per cent to 13.3 per cent), Great Britain (from 22 per cent to 22.1 per cent), the Irish Free State (from 31,162 registered at employment exchanges to 35,874), Japan (from 6.7 per cent to 6.8 per cent), Poland (from 14 per cent to 15.3 per cent) and the United States (23.1 per cent to 31 per cent). In Australia unemployment has also increased from 28 per cent to 28.3 per cent, but there the increase is probably due to seasonal factors. In Belgium and Switzerland there is an increase in the number recorded but not in the percentages, due evidently to the fact

that a larger number of people are covered by the voluntary insurance funds in those countries. Moreover, in those cases in which unemployment has declined in the last three months, the decrease has been a comparatively small one, as for instance in Belgium (from 43.2 per cent to 42.7 per cent), Germany (33 per cent to 30.4 per cent) and Switzerland (from 25 per cent to 23 per cent).

It is further pointed out that the period covered (that is the second quarter of 1932) is one in which unemployment usually declines (in the northern hemisphere) as a result of seasonal factors. However, in a number of countries unemployment has not declined at all; on the contrary it has increased, clear evidence that the general situation, apart from seasonal influences, has deteriorated considerably since the beginning of the year. "This is all the more remarkable because in some countries the figures might have been expected to show a decrease for reasons due to the legislation in force. Thus in Great Britain the number of persons registered at the employment exchanges has tended to decline because a number of insured persons have exhausted their right to benefit, and in Austria the number recorded as unemployed excludes those who have exhausted their right to benefit."

### Employer Liable for Automobile Accident Costs

The Industrial Accident Prevention Associations of Ontario directs attention in its monthly memorandum for industry (No. 14) to the liability of an employer for automobile accident costs. Quoting the text of a reply by T. N. Phelan, K.C., chief counsel for the Ontario Motor League, to a letter of an enquiry on the subject, the memorandum points out that this matter is of interest to all employers whose employees use motor vehicles in the course of their business activities:—

"A master is liable for the damage caused by any negligent act on the part of his servant, provided the act was committed in the course of the servant's employment. One of your salesmen using his car to solicit orders for your business is using that car under circumstances that would render you, as master, liable for damage caused by the negligent

operation of the car. At the same time, the servant himself is responsible for these damages. The injured person or the person sustaining the damage has the right and option of suing the master or the servant, or both. Whether the claimant sues one or both, the claimant recovers only the amount of damage to which the claimant is actually entitled. If the amount to which the claimant is entitled is, for the purpose of illustration, say \$5,000, the claimant can recover this amount either from the master or the servant or by a joint judgment against both. The claimant cannot recover the same amount twice. The liability of the master in these cases is termed by insurers a contingent liability, and this liability may be insured against at about one-third of the usual premium charge. We always advise those clients whose employees use motor cars in the course of the claimant's business that they should protect themselves by insurance against this contingent liability."

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1, was 7,970, the employees on their payrolls numbering 816,124 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 1,800, having an aggregate mem-

bership of 175,411 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of June as Reported by Employers

Employment at the beginning of June showed a seasonal improvement, according to data tabulated by the Dominion Bureau of Statistics from 7,970 firms throughout Canada, whose payrolls aggregated 816,124 persons, as compared with 801,451 on May 1. This increase of 14,673 persons, or 1·8 per cent, brought the index number to 89·1, as compared with 87·5 in the preceding month and 103·6 on the same date last year. On June 1 in the ten preceding years, the index was as follows:—1930, 116·5; 1929, 122·2; 1928, 113·8; 1927, 107·2; 1926, 102·2; 1925, 95·6; 1924, 96·4; 1923, 98·5; 1922, 90·3 and 1921, 87·7. In calculating these index numbers, the base taken is the average for the calendar year 1926.

Large advances were registered in construction, while there were smaller increases in logging (due to river driving operations) and in transportation, manufacturing and services. Coal mining was seasonally slacker, while trade, on the whole, showed little change.

#### Employment by Economic Areas

Expansion was indicated in all of the five economic areas, firms in the Maritime Provinces and Quebec employing the greatest number of extra workers.

*Maritime Provinces.*—Gains were noted in the Maritime Provinces, according to statistics received from 601 employers with a combined working force of 66,224 persons, as compared with 60,286 on May 1. This increase was very considerably larger than that reported on June 1 last year, although the index then was higher.

Manufacturing (particularly in the lumber, fish-canning, pulp and paper and electric current divisions), logging, mining and construction registered heightened activity, the improvement in the last-named being most pronounced. On the other hand, transportation was seasonally slacker, and iron and steel plants also released employees.

*Quebec.*—Construction and transportation recorded important increases in personnel in Quebec, and there were also gains in the logging, trade and service groups. Manufacturing, as a whole, was slacker, owing to losses in the tobacco, pulp and paper, electrical apparatus and iron and steel divisions, while clay, glass and stone, lumber, food and some other factories showed improvement. Employment was in smaller volume than on the same date in 1931. Statements were tabulated from 1,891 firms employing 236,284 workers on June 1, or 4,605 more than in their last monthly report.

*Ontario.*—Employment in Ontario showed an advance; the index, at 89·9, was lower than in June 1, 1931, when slightly larger gains had been noted in the province. The payrolls of the 3,541 co-operating establishments aggregated 336,266 employees, as against 334,936 on May 1. Construction, logging, transportation and mining registered the greatest expansion, but manufacturing and services showed contractions; within the former, considerable increases in the lumber, vegetable food and pulp and paper groups were offset by losses in iron and steel, textile and electrical apparatus factories.

*Prairie Provinces.*—Construction (especially railroad construction), transportation, services and manufacturing reported improvement in the Prairie Provinces, but logging, coal mining and retail trade released employees. The 1,149 employers whose statistics were tabulated employed 109,207 persons, as against 107,086 in the preceding month. Greater increases were indicated on June 1, 1931, and the index then was higher.

*British Columbia.*—An aggregate payroll of 68,143 workers was employed by the 788 reporting firms, who had 67,464 at the beginning of

Vancouver all showed considerable gains, but declines were noted in Toronto, Ottawa, Hamilton and Winnipeg.

*Montreal.*—Improvement was recorded in Montreal, where the 1,066 co-operating firms employed 134,895 persons, an increase of 711 over their May 1 staffs. Transportation and trade reported increases, but manufacturing was slacker, particularly in the tobacco, electrical apparatus and textile divisions, and there were also losses in construction. The index, at 91.7, was lower than in June, 1931, although smaller gains had then been indicated.

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

May. Employment was in smaller volume than in the early summer of 1931, when the reported gains were on a larger scale. Construction and transportation recorded the most noteworthy expansion on the date under review. Within the manufacturing group, improvement in the food, pulp and paper and lumber divisions was largely offset by losses in non-ferrous metal works. Mining and trade also showed curtailment.

Table I gives index numbers by economic areas.

#### Employment by Cities

The trend of employment was upward in four of the eight cities for which separate compilations are made; Montreal, Quebec City Windsor and the adjoining Border Cities and

*Quebec.*—Continued but smaller gains were registered in Quebec City, chiefly in construction and trade. Statements were tabulated from 141 establishments having 12,793 workers, as against 12,622 in the preceding month. Advances had also been indicated at the beginning of June a year ago, when the index was higher.

*Toronto.*—Returns were furnished by 1,193 employers in Toronto with 115,228 persons on their payrolls, compared with 116,164 on May 1. Manufacturing as a whole was quieter, losses in textile and electrical apparatus factories offsetting gains in printing and publishing, iron and steel and some other industries. Construction and trade also released employees. The index was lower than on June

1, 1931; a rather larger contraction had then been indicated.

*Ottawa.*—Construction showed lowered activity in Ottawa, but manufacturing was rather busier. Employment was not so active as at the beginning of June of last year, when little general change had been recorded. A combined working force of 12,772 employees was indicated by the 154 co-operating firms, who had 13,070 on their staffs in the preceding month.

*Hamilton.*—Further reductions in personnel were noted in Hamilton, where 234 employers reported 26,931 workers on their paylists, as compared with 27,506 at the beginning of May. Most of the decrease took place in manufacturing, notably in textile and iron and steel plants, while construction was more active. Employment was quieter than on the same date a year ago, although a much greater recession was then noted.

*Windsor and Adjacent Border Cities.*—Employment in the Border Cities showed an in-

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,  
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
June 1, 1921.....	87.7	100.4	79.5	90.4	80.5	82.8
June 1, 1922.....	90.3	98.1	84.0	93.5	92.2	85.7
June 1, 1923.....	98.5	105.5	95.4	103.1	94.8	89.1

crease on June 1, when data were received from 138 firms with 11,673 employees, or 365 more than at the beginning of May. Most of the gain took place in automobile factories, while other groups reported only slight changes. Losses had been registered on June 1, 1931, but employment was then in greater volume.

*Winnipeg.*—An aggregate working force of 34,929 persons was indicated by the 378 employers whose statistics were received, and who had 35,314 employees on May 1. This decline compared unfavourably with the increase noted at the beginning of June of last year, when the index was higher. A large share of the

reduction recorded on the date under review was in trade and construction, while manufacturing and transportation were rather busier.

*Vancouver.*—Manufacturing and shipping reported gains in Vancouver, but the changes in the other groups were on a small scale. Statements were tabulated from 339 employers with 27,907 workers in their employ as compared with 27,385 on May 1. A somewhat larger increase had been indicated on June 1 a year ago, and the index then was higher.

Index numbers by cities are given in Table II.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

### Manufacturing

Statements were tabulated from 4,901 manufacturers employing 426,110 operatives, as compared with 425,148 in the preceding month. Gains, largely of a seasonal nature, were registered in the lumber, pulp and paper, fish-preserving, vegetable food, building material, automobile, electric current and mineral product industries. On the other hand, iron and steel, non-ferrous metal, electrical apparatus, textile, clothing, tobacco and some other factories were slacker. Employment was in smaller volume than on June 1, 1931, although a considerable contraction in manufacturing employment had then been reported.

*Animal Products, Edible.*—There were further and more pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces. Statistics were tabulated from 250 firms employing 19,017 persons, as compared with 17,366 in the preceding month. This advance was rather more extensive than that reported on June 1, 1931, but the index was then a few points higher.

*Fur and Fur Products.*—There was an upward trend in employment in fur factories, 43 of which enlarged their payrolls from 1,523 persons at the beginning of May, to 1,658 on June 1. A similar gain had been indicated on

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

the same date last summer, but activity was then at a higher level.

*Leather and Products.*—Employment in this group showed a falling-off, which was smaller than that indicated in the same month last year, when the index was fractionally higher.

The working forces of the 244 co-operating employers totalled 18,389 persons, as against 18,569 in the preceding month. The largest declines were in Ontario.

*Lumber and Products.*—Continued seasonal expansion took place in lumber mills, and there

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

<sup>1</sup>The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

were also gains in container factories. Returns were compiled from 760 manufacturers in the lumber group having 33,252 workers on their staffs, compared with 31,224 at the beginning of May. All provinces shared in the upward movement on June 1. Rather greater additions to staffs were made on the same date last year, when the index was considerably higher.

*Plant Products, Edible.*—Increases were noted in this group at the beginning of June, when 1,006 persons were added to the forces of the 387 co-operating manufacturers, who had 27,524 employees. Fruit and vegetable canning and sugar and syrup establishments reported most of the improvement, which occurred mainly in Quebec, Ontario and British Columbia. The increase registered on June 1, 1931, was much smaller, but the situation then was rather better than on the date under review.

*Pulp and Paper Products.*—All branches of this group showed improvement, that in printing and publishing establishments being most pronounced. The index number stood at 88.3, compared with 97.5 at the beginning of June of last year, when curtailment had been noted. An aggregate payroll of 53,238 workers was reported by the 565 establishments whose statistics were compiled; these had employed 52,622 in the preceding month.

*Rubber Products.*—Forty-four rubber factories recorded a combined working force of 10,999 persons, or 53 more than in their last return. Employment was in smaller volume than at the beginning of June a year ago, although a decrease had then been indicated.

*Textile Products.*—There was a seasonal reduction in activity in textiles on the date under review chiefly in clothing, knitting and woollen factories in Quebec and Ontario. Data were received from 819 firms employing 83,445 persons, as against 84,939 in the preceding month. This contraction involved a much larger number of workers than that reported on June 1, 1931, when the index was a few points higher than at the time of writing.

*Tobacco, Distilled and Malt Liquors.*—Activity in this group showed a falling-off, according to 151 employers whose staffs decreased from 15,472 in the preceding month to 14,423 on the date under review. Tobacco factories in Quebec recorded most of this decline. The index number on June 1, 1931, was higher than on the date under review, the downward movement then indicated having involved a smaller number of workers.

*Chemicals and Allied Products.*—Statements were tabulated from 145 plants in this division with 8,433 persons on their payrolls, practically

the same number as in the preceding month. The index number stood at 114.1, compared with that of 119.0 on the same date in 1931, when a loss had been reported.

*Clay, Glass and Stone Products.*—Further improvement was noted in building material plants, 182 of which employed an aggregate working force of 9,016 persons, or 673 more than on May 1. The index stood at 83.1; this was considerably lower than that recorded on June 1, 1931, although a smaller increase had then taken place. Quebec reported the bulk of the gain, in which all branches of the industry shared.

*Electric Current.*—An advance as compared with May was shown in electric current plants, in which activity was lower than at the beginning of June, 1931. The 92 co-operating companies increased their staffs by 419 workers to 14,499 at the beginning of June. The Maritime Provinces recorded the greatest improvement.

*Electrical Apparatus.*—Decreased activity was shown in electrical appliance factories, 88 of which reduced their payrolls by 704 employees to 12,198 on the date under review. A smaller recession had been recorded on June 1, 1931, and employment then was at a higher level. Quebec and Ontario firms registered practically all the reduction reported on the date under review.

*Iron and Steel Products.*—There was a further decline in the iron and steel group, mainly in rolling mills, railway car shops, and general plant machine works, while automobile factories showed improvement. Returns were tabulated from 765 manufacturers employing 90,536 persons, compared with 91,965 on May 1. Contractions were noted in all provinces except British Columbia, those in Ontario being the largest. Much more extensive losses took place on June 1, 1931, but the index was than many points higher.

*Non-ferrous Metal Products.*—This group of industries reported reduced activity, according to 135 firms employing 12,198 persons, compared with 12,938 in the preceding month. The decrease took place almost entirely in British Columbia. Contractions had also been recorded at the beginning of June of a year ago, when employment was in greater volume.

*Mineral Products.*—Continued seasonal advances were noted generally in this group, in which they were practically the same size as those indicated on June 1, 1931, when the index number was, however, a few points higher. An aggregate payroll of 12,044 was reported by the 100 co-operating employers, who had 11,734 workers in the preceding month.

*Miscellaneous Manufacturing Industries.*—Production in the manufacturing establishments listed under this heading showed a decrease, 247 workers having been let out from the forces of the 89 firms whose returns were tabulated, and who employed 4,033 at the beginning of May.

### Logging

Employment in logging camps showed an increase, chiefly due to river-driving operations in the Maritime Provinces, Quebec and Ontario. Returns were received from 222 firms employing 10,376 persons, or 1,477 more than on May 1. Reduced activity had been indicated on June 1, 1931, but the index was then higher.

### Mining

*Coal Mining.*—Employment in the western coal fields showed a falling-off, while there was improvement in the Maritime Provinces. Statements were compiled from a total of 89 operators with 23,415 employees, or 870 fewer than at the beginning of May. The index was lower than on June 1, 1931, when a very slight decline had been recorded.

*Metallic Ores.*—An advance was shown in metallic ore mines, mainly in Quebec and Ontario; 63 employers enlarged their staffs from 15,418 workers on May 1, to 15,632 at the beginning of June. Despite this gain, the index was a few points lower than on June 1, 1931, when improvement was also indicated.

*Non-Metallic Minerals (other than coal).*—According to data received from 79 firms in this group, they employed 4,938 persons, or 176 more than the preceding month. Employment was not so active as on the same date of last year, although losses had then been reported by the co-operating firms.

### Transportation

*Street Railways and Cartage.*—A further increase was registered in local transportation on June 1, when 171 companies added 151 employees to their staffs, bringing them to 23,214 on the date under review. This gain was not so large as that noted at the beginning of June, 1931, when the index was a few points higher. The improvement shown was chiefly in Ontario.

*Steam Railways.*—A contraction was indicated in steam railway operation, in which the 98 co-operating employers reduced their staffs from 62,003 in the preceding month to 61,558 on June 1. The Maritime Provinces reported reductions, but there were increases in the Prairie Provinces. Employment was at a lower level than on June 1 of last year, when expansion had been recorded.

*Shipping and Stevedoring.*—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Quebec, Ontario and British Columbia. Statistics were received from 88 firms with 15,943 employees, as compared with 14,261 in the preceding month. Smaller gains were noted on June 1, 1931, the index then, however, was higher.

### Communications

Continued improvement was indicated on telegraphs, but telephones were rather slacker, so that there was no general change in the communications group. The 73 companies and branches reporting had 24,343 persons on their staffs at the beginning of May. Employment was at a lower level than on June 1, 1931, when a general increase had been indicated.

### Construction and Maintenance

*Building.*—An aggregate staff of 24,776 was reported by the 668 contractors furnishing statistics, who had 23,040 workers on May 1. Activity increased in all provinces except British Columbia, but the largest gains were in Quebec. Building was not so brisk as on the same date a year ago, when much greater expansion had been reported.

*Highway.*—The 353 highway and road contractors furnishing returns had 51,735 persons in their employ, or 6,048 more than at the beginning of May. This improvement (shared in by all provinces except Ontario), was not so extensive as that noted on June 1, 1931, and the level of employment then was higher.

*Railway.*—Continued advances were registered by the track departments of the railways, in which the volume of employment was less than at the beginning of June of last year. The working forces of the 36 co-operating employers totalled 29,124 persons, as against 25,869 in the preceding month. The most noteworthy increases were in Ontario and the Prairie Provinces, although general improvement was indicated.

### Services

Hotels and restaurants showed their customary seasonal increase, while only small changes took place in other branches of this group. Statements were compiled from 289 firms employing 22,000 workers, as compared with 21,629 on May 1. The index, at 116.8, though lower on the date under review than on June 1 in the years 1928-1931, was higher than in the early summer of previous years of the record.

### Trade

Improvement was indicated in wholesale trade, but retail establishments were slacker; 840 establishments reported 82,960 employees, or 95 fewer than in their last return. A gain had been noted on June 1, 1931, when the index was higher. Except for 1931, 1930 and 1929, however, employment as reported by trading establishments was higher on the date under review than on June 1 in any other year on record. It should be noted, however, that the staffs of many stores have been maintained

at approximately normal level by reducing the hours worked by the individual employee.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

## (2) Unemployment in Trade Unions at the Close of May, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The unemployment level among local trade unions at the close of May varied but slightly from that of the preceding month, as shown by the reports received from a total of 1,800 labour organizations with 175,411 members. Of these, 38,692 were without work on the last day of the month, a percentage of 22.1, in contrast with 23.0 per cent of inactivity in April. A general upward employment tendency was noted in the majority of trades and industries as compared with April, chiefly due to seasonal influences, and affecting particularly the building and construction trades which in every province indicated some opening-up of activity. Alberta unions alone reported a less favourable employment volume than in April, the decline being but fractional, while in all other provinces some improvement was noted. The gains, however, were not outstanding in any one province, ranging from 2.9 per cent in Saskatchewan to 0.4 per cent in Nova Scotia and Ontario. All provinces contributed a share to the total increase of unemployment among trade unions from May last year when 16.2 per cent of idleness was registered in the country as a whole. In this comparison Ontario and Manitoba unions reported the most noteworthy employment recessions during the month reviewed, and in Quebec and British

Columbia also substantial curtailment of activity was noted, the reductions in the remaining provinces being of more moderate proportions.

The returns on unemployment in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. Of these, Halifax and Regina unions reported considerable improvement in conditions as compared with April; lesser gains in activity were reported from Montreal, while in Edmonton and Vancouver the tendency was toward greater employment, though the change was slight. On the other hand, some falling off from April in available work was shown by Saint John unions, and in Toronto and Winnipeg nominal declines occurred. Severe losses in employment were recorded among Halifax and Toronto unions as compared with May a year ago and in Vancouver, Winnipeg and Montreal noteworthy curtailment was evident. Declines in activity, though on a smaller scale, were reflected also by Saint John, Edmonton and Regina unions.

Accompanying this article is a chart which illustrates the unemployment trend by months from January, 1926, to date. The curve in May showed a slight drop in level from April, indicative of a somewhat better employment trend, attaining at the close of the month a point substantially above that indicated in May last year, when unemployment was in lesser volume than in the month reviewed.

The manufacturing industries, with 476 organizations involving a membership of 47,602 persons in May reported 24.2 per cent of their members idle on the last day of the month, contrasted with percentages of 25.5 in April and 17.9 in May last year. Improvement among papermakers, garment, and woodworkers was the determining factor in the slightly better situation shown in the comparison with April, the contractions evident among iron and steel, textile, hat and cap, and glass workers, metal polishers and gen-

eral labourers not being sufficient to offset the improvement. Among printing tradesmen and fur workers the level of activity remained unchanged in both months. A considerable lessening of the unemployment volume from May last year was indicated by garment workers, although short time work was quite prevalent, and among papermakers, and meat cutters and butchers decidedly better conditions were shown. A slightly upward employment movement was also indicated by leather workers. On the contrary, when compared with May a year ago, activity for iron and steel, textile, fur, glass, and hat and cap workers and general labourers was substantially

May last year, and in Nova Scotia the employment balance was unfavourable though the change was slight. British Columbia miners, on the other hand, reported a nominal improvement in the situation. Short time continued to be in evidence to a marked degree in both the eastern and western coal fields, a number of miners being affected through trade disputes.

Building and construction activities were somewhat stimulated during May, chiefly as a result of seasonal influences, the 248 unions from which returns were tabulated with 23,604 members, indicating 57.2 per cent of idleness, contrasted with 62.7 per cent in April. Un-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

curtailed, and among printing tradesmen and wood workers employment was on a somewhat lower level.

Little change from either the previous month or May a year ago was noted in the mining industry during May, according to the figures tabulated from a total of 48 unions with a membership aggregate of 16,943 persons. Of these 2,423 were reported idle on the last day of the month, a percentage of 14.3, in contrast with 13.3 per cent of unemployment in April and 12.8 per cent in May, 1931. In Alberta and British Columbia the situation remained substantially the same in both the month reviewed and in April, the coal mines of Nova Scotia accounting practically entirely for the slight adverse change from April. In the Alberta mines a considerable increase in slackness was shown from

employment was, however, considerably in excess of that recorded in May, 1931, when 37.7 per cent of the membership involved were without work. Painters, decorators and paperhangers reported noteworthy recovery during May from the slackness of the previous month, and among hod-carriers and building labourers also a much better employment volume was noted. Important seasonal increases in activity were also in evidence among bricklayers, masons and plasterers, carpenters and joiners, granite and tile cutters, plumbers and steamfitters, and tile layers, lathers and roofers. On the other hand, employment for bridge and structural iron workers and electrical workers subsided slightly. Large increases in slackness from May last year were reported by granite and stonecutters, bridge and structural iron work-

ers, plumbers and steamfitters, carpenters and joiners, bricklayers, masons and plasterers, painters, decorators and paperhangers and electrical workers, and among hod-carriers and building labourers employment was slightly reduced. Tile layers, lathers and roofers, however, were afforded a considerably greater volume of activity than in May a year ago.

The situation in the transportation industries was slightly better during May than in the previous month, the employment percentage standing at 12.5 as contrasted with 13.2 per cent of inactivity in April. The percentage for May was based on the reports

received from a total of 782 unions covering a membership of 63,031 persons, 7,871 of whom were without work on the last day of the month. Steam railway employees, whose returns constituted over 79 per cent of the entire group membership reporting, were alone responsible for this favourable employment trend noted in May, navigation workers and teamsters and chauffeurs showing some reductions in activity, while among street and electric railway employees almost stationary conditions prevailed. Steam railway employees, navigation workers, teamsters and chauffeurs, and street and electric railway employees all participated in the retrogressive employment movement from May of last year, when 9.2 per cent of the members reported in the transportation industries as a whole were idle, the declines in steam railway operation, as in the previous comparison, involving the greatest number of members.

The 4 unions of retail clerks making returns in May, with 1,169 members, reported 2.3 per cent of unemployment on the last day of the month, in contrast with 2.9 per cent of idleness in April and 4.9 per cent in May a year ago.

Activity for civic employees was somewhat curtailed in May from the previous month, the 71 associations reporting, with an aggregate membership of 8,417 persons, indicating 9.5 per cent of their members idle, as against 5.6 per cent in April. Marked increases in unemployment were reported also from May a year ago, when 2.1 per cent of inactivity was recorded.

The employment volume afforded workers in the miscellaneous group of trades showed but a nominal change during May from the previous month, the 125 labour organizations from which returns were received, with 5,357 members, indicating an unemployment percentage of 20.5, compared with 20.8 per cent in April. The situation for hotel and restaurant employees improved by 4 per cent from April, and among unclassified workers the gain in employment recorded was about 2 per cent. Among barbers, and stationary engineers and firemen the tendency was toward greater activity, though the changes were but nominal. Less favourable conditions, however, prevailed for theatre and stage employees. Unemployment in the miscellaneous group of trades was at a higher level than in May, 1931, when 16.8 per cent of the membership reported was without work, stationary engineers and firemen, and theatre and stage employees accounting largely for the change, though activity for barbers was also slightly curtailed. Unclassified workers were much

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

better employed than in May last year, and among hotel and restaurant employees the situation remained the same in both months compared.

All fishermen included in the returns supplied to the Department of Labour during May were reported busy as in April, compared with an unemployment percentage of 1.1 in May, 1931.

Much the same situation obtained for lumber workers and loggers during May as in the month preceding, the percentage of idleness standing at 26.7, in contrast with 26.1 per cent in April. The May percentage was based on the reports tabulated from 4 unions of these

workers embracing a membership of 724 persons. Some lessening of the unemployment volume was indicated from May last year, when 31.8 per cent of the members reported were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931, inclusive, and also the percentage of unemployment by provinces for May of each year from 1919 to 1929, inclusive, and for each month from January, 1930 to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for May, 1932

The volume of business transacted by the offices of the Employment Service of Canada during the month of May, 1932, as shown by the daily average placements effected, showed a decline of 4 per cent from April and a gain of 1 per cent over May, 1931. In comparison with the preceding month heavy declines were recorded in construction and maintenance and farming, with slight recessions in transportation and trade. A substantial gain, however, was reported in services, also a fairly heavy increase in logging, while that in manufacturing was small. Construction and maintenance and farming were the only divisions to record increased placements over May last year, but these gains were largely counteracted by losses in services, manufacturing, transportation and trade. Placements in logging were practically unchanged.

The accompanying chart shows the trend of employment from January, 1930, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the trend of the curve, both of vacancies and placements in relation to applications, was downward throughout the month, and at the close of the period under review had reached a slightly lower level than that recorded at the close of May a year ago. The ratio of vacancies to each 100 applications was 59.4 and 58.3 during the first and the second half of May, respectively, in contrast with ratios of 61.4 and 59.4 during the same periods of 1931. The ratios of placements to each 100 applications during the month under review were 57.2 and 56.2 as

compared with 58.5 and 56.5 during May a year ago.

The average number of vacancies reported daily by employees to the offices of the Service throughout Canada during May, 1932, was 1,289, as compared with a daily average of 1,345 in the preceding month, and with 1,292 in May, 1931.

The average number of applications for employment received by the offices during the month under review was 2,190, in comparison with 2,225 in April and with 2,134 in May last year.

The average number of placements made daily by the offices of the Service during May, 1932, was 1,242, of which 501 were in regular employment and 741 in work of one week's duration or less, as compared with a total daily average of 1,298 in the previous month. Placements during May last year averaged 1,230 daily, consisting of 443 placements in regular and 787 in casual employment.

During the month of May, 1932, the offices of the Service referred 32,869 persons to vacancies and effected a total of 31,039 placements. Of these, the placements in regular employment were 12,510, of which 8,858 were of men and 3,652 of women, while placements in casual work numbered 18,529. The number of vacancies reported by employers was 23,959 for men and 8,250 for women, a total of 32,209, while applications for work numbered 54,745, of which 42,408 were from men and 12,337 from women workers.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1932 (5 months).....	57,216	105,196	162,412

NOVA SCOTIA

Opportunities for employment, as indicated by orders received at Employment Offices in Nova Scotia during May, were nearly 28 per cent better than in the preceding month but

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

almost 18 per cent less favourable than during the corresponding month last year. There was a gain of over 30 per cent in placements when compared with April, but a loss of nearly 17 per cent when compared with May, 1931. The reduction in placements from May of last year was nearly all due to a decline in the transportation group, although all divisions participated in the curtailment of orders. The only groups in which any considerable number of placements was effected were construction and maintenance, with 363; and services with 562, of which 307 were of

household workers. During the month 307 men and 70 women were placed in regular employment.

NEW BRUNSWICK

There was a gain of 27 per cent in the number of positions offered by New Brunswick offices during May when compared with the preceding month, and of over 7 per cent in comparison with the corresponding month last year. Placements also were 27 per cent higher than in April and 4 per cent over May, 1931. There were more placements in construction and maintenance, manufacturing, transportation and farming than during May last year, but these gains were partly offset by declines in services, logging and trade. Most of the placements effected during the month were in services, in which group,

employment was found for 707 workers, of whom 446 were placed with householders. There were 101 placements in construction and maintenance and 32 in the manufacturing industries. Regular employment was found for 57 men and 74 women.

QUEBEC

Employment opportunities, as indicated by orders received by Employment Offices in the Province of Quebec, were over 12 per cent better than in the preceding month and over 7 per cent in excess of the corresponding

\*99 Placements effected by offices since closed.

month last year. There was a gain of nearly 6 per cent in placements when compared with April and also in comparison with May, 1931. Increased placements in services and manufacturing were responsible for the gain over May last year, although all groups except logging, construction and maintenance, and transportation showed improvement. The declines in logging and construction and maintenance were substantial and largely offset the gains in other divisions. Industrial groups in which most of the placements were effected during the month were: manufacturing, 121; logging, 59; farming, 46; construction and maintenance, 289; trade, 39; and services, 1,219, of which 983 were of household workers. There were 661 men and 827 women placed in regular employment during the month.

#### ONTARIO

During the month of May, positions offered through Employment Offices in Ontario were 7 per cent less than in the preceding month and nearly 12 per cent below the corresponding month last year. Placements also declined nearly 7 per cent from April and were nearly 10 per cent less than during May, 1931. Farming and logging were the only groups to show gains in placements over May last year. Heavy declines in construction and maintenance, services and manufacturing, with somewhat smaller losses in trade and transportation, accounted for the adverse change under this comparison. Placements by industrial divisions included: manufacturing, 435; logging, 647; farming, 707; transportation, 51; construction and maintenance, 8,035; trade 364; and services, 4,733, of which 2,245 were of household workers. During the month 2,638 men and 1,382 women were placed in regular employment.

#### MANITOBA

Employment Offices in Manitoba were notified of nearly 18 per cent less vacancies during May than in the preceding month, but nearly 57 per cent more than during the corresponding month last year. There were also approximately the same percentages of change in the number of placements effected. The gain in placements over May last year was principally due to relief work provided on sewer and watermain construction in St. Boniface; farming and manufacturing, however, also showed increases. The only declines of importance were in services and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 55; farming, 301; construction and maintenance, 1,754; trade, 53; and services, 1,232, of which 980 were of household workers.

Placements in regular employment numbered 831 of men and 445 of women.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during May, was nearly 20 per cent less than in the preceding month and nearly 4 per cent below the corresponding month of last year. There was a decline of over 18 per cent in placements when compared with April, and of over 7 per cent in comparison with May, 1931. The only changes of importance in placements from May last year were in farming, where a substantial gain was shown, and in construction and maintenance, for which group a heavy loss was reported. This decline more than offset the increase in farm placements and accounted for the adverse change when compared with the corresponding month last year. Placements by industrial divisions included: manufacturing, 37; farming, 704; transportation, 22; construction and maintenance, 405; trade, 43; and services, 971, of which 558 were of household workers. There were 798 men and 374 women placed in regular employment during the month.

#### ALBERTA

During the month of May, orders received at Employment Offices in Alberta called for nearly 18 per cent fewer workers than in the preceding month, but for nearly 6 per cent more than during the corresponding month last year. Approximately the same percentages of change were recorded in placements. Farm and bush placements were higher than during May, 1931, and construction and maintenance showed a small gain. These increases, however, were partly offset by declines in services, manufacturing, and trade; the changes in other groups were nominal only. Industrial divisions in which most of the placements were made during the month were: logging, 159; farming, 698; construction and maintenance, 1,533; and services, 632, of which 396 were of household workers. During the month 1,355 men and 305 women were placed in regular employment.

#### BRITISH COLUMBIA

During the month of May orders received and placements effected by British Columbia offices were about 6 per cent less than in the preceding month but nearly 25 per cent in excess of the corresponding month last year. The gain in placements over May, 1931, was attributable to work provided in relief of unemployment on highway construction, and increased placements in building construction, construction and maintenance being the only group to show improvement. Of the declines

in all other divisions, those in services and transportation were the largest. Placements by industrial divisions included: logging, 41; farming, 84; construction and maintenance, 2,933; and services, 546, of which 366 were of household workers. There were 2,211 men and 175 women placed in regular employment during the month.

### Movement of Labour

During the month of May, 1932, the offices of the Employment Service of Canada made 12,510 placements in regular employment, 4,785 of which were of persons for whom the employment secured was outside the immediate vicinity of the offices at which they were registered. Of the latter, 209 were granted the Employment Service reduced transportation rate, 197 going to points within the same province as the despatching office, and 12 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The certificate for reduced transportation granted by Ontario offices in May were entirely to provincial points and numbered 69. Of these 49 were issued to logging and lumber workers for employment principally in the Port Arthur and Sudbury zones, who secured their certificates, for the most part, at these zone offices. To employment within its own zone also, Port Arthur transferred 8 survey workers and 3 cooks, this zone being the destination of 1 general maid despatched from Fort William. For centres in the Timmins zone 5 survey workers received certificates at Pembroke and 2 construction workers at Niagara Falls, while the Toronto office shipped 1 granite cutter to Sarnia. In Manitoba both the provincial and inter-provincial labour movement emanated from Winnipeg, and comprised the transfer of 79 persons. Of these 68 went to employment within the province, including 1 hotel worker each to the Brandon and Dauphin zones and 44 farm hands, 3 farm domestics, 12 sheet

metal workers, 2 general construction workers, 2 saw-mill labourers, 1 hotel worker, 1 section man, and 1 laundry worker to various centres within the Winnipeg zone. Of the 11 persons going to situations outside the province, the Port Arthur zone received 2 farm hands, 1 housekeeper and 1 hotel kitchen worker, while to Saskatchewan rural centres were despatched 7 farm hands. The 16 workers securing certificates for reduced transportation in Saskatchewan during May were all destined to provincial points, 14 of whom were for agricultural work in various sections of the province and travelled chiefly from Regina and Saskatoon. From Regina also 1 teacher journeyed to employment within the same zone and 1 hotel domestic to Moose Jaw. Offices in Alberta issued during May, 38 certificates for reduced transportation, 37 of which were to provincial centres. Of these, 21 were farm hands and 1 a farm housekeeper for employment in the Drumheller and Edmonton zones, the majority travelling on certificates issued at Edmonton. In addition, the Edmonton office was instrumental in transferring 4 highway construction workers, 2 mine workers, 2 saw-mill workers, 2 steamship company employees, 1 labourer and 2 domestics to employment within its own zone while from Calgary 1 town housekeeper went to Edmonton and 1 highway timekeeper within the Calgary zone. The one worker going outside the province was a farm hand conveyed from Edmonton to Saskatoon. Workers taking advantage of the Employment Service reduced rate in British Columbia during May numbered 7, all going to provincial employment. From Vancouver 1 hotel cook and 1 saw-mill worker were transported to Kamloops, and 1 flunkey to a point within the Vancouver zone, while the balance of this provincial movement was of farm labour.

Of the 209 persons who travelled at the Employment Service reduced transportation rate during May, 147 were carried by the Canadian National Railways, 57 by the Canadian Pacific Railway, 3 by the Northern Alberta Railway and 2 by the Pacific Great Eastern Railway.

### (4) Building Permits Issued in Canada During May

The value of the building permits issued by 61 cities during May, 1932, was higher by 24.8 per cent than in April, 1932, but lower by 56.3 per cent than in May, 1931. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to \$5,289,506 as compared with \$4,237,160 in the preceding month and \$12,115,291 in May, 1931. The total for the first

five months of 1932, namely \$18,190,794 was lower than that for the corresponding period in any of the years since 1920. Wholesale prices of building materials were lower in 1932 than in any other year of the record, averaging 79.0 per cent for the first five months as compared with 83.7 per cent and 92.8 per cent, in the same periods of 1931 and 1930, respectively.

Some 50 cities furnished detailed statistics, showing that they had issued over 400 permits for dwellings valued at approximately \$1,250,000 and for some 2,700 other buildings estimated to cost over \$3,800,000. In addition three cities—Brantford, Port Arthur and Moose Jaw—reported that they had authorized engineering projects valued at approximately

\$130,000. In April, authority was given for the erection of some 400 dwellings and 2,000 other buildings, valued at approximately \$1,100,000 and \$2,700,000, respectively.

Quebec, Manitoba and Saskatchewan reported increases of 76.7 per cent, 458.0 per cent and 86.7 per cent, respectively, in the value of the permits issued as compared with April, 1932. Of the declines in the remaining provinces, that of \$220,001 or 84.5 per cent in New Brunswick was most pronounced.

As compared with May, 1931, Manitoba and Saskatchewan registered increases. The other provinces recorded declines, of which that of \$3,452,712 or 69.6 per cent in Ontario was most noteworthy.

Of the larger cities, Winnipeg reported a higher total of building permits issued than in either April, 1932, or May, 1931, Montreal registering a gain compared with April, 1932, but a loss compared with May, 1931, while in Toronto and Vancouver there was a decrease in both comparisons. Of the other centres, Fort William, Kingston, Port Arthur, Saskatoon and Edmonton recorded increases in the value of the building authorized as compared with both the preceding month and the same month of last year.

*Cumulative record for first five months, 1932.*—The following table gives the value of the building authorized by 61 cities in May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

Year	Value of permits issued in May	Value of permits issued in first five months	Indexes of value of permits issued in first five months (1926=100)	Average indexes of wholesale prices of building materials in first five months (1926 average=100)
1932.....	\$ 5,289,506	\$18,190,794	30.3	79.0
1931.....	12,115,291	50,356,550	83.9	83.7
1930.....	20,321,160	66,792,498	111.2	92.8
1929.....	24,185,723	96,792,675	161.2	90.1
1928.....	27,515,322	79,285,027	132.0	96.0
1927.....	20,138,657	62,479,480	104.1	98.0
1926.....	18,504,296	60,042,369	100.0	101.3
1925.....	15,520,435	50,983,833	84.9	103.1
1924.....	14,807,589	46,544,689	77.5	111.3
1923.....	18,937,638	57,946,608	96.5	111.1
1922.....	19,527,061	54,040,922	90.0	102.0
1921.....	14,460,878	41,530,750	69.2	132.2
1920.....	13,082,015	47,640,916	79.3	144.7

The aggregate for the first five months of this year was thus only 18.8 per cent of the total for the same period of 1929, the high level of the record. The average index number of wholesale prices of building materials, however, was lower than in any of the years since 1920.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette* states that employment in Great Britain and Northern Ireland at May 23 showed a decline as compared with April 25. The figures for May 23 relate, however, to the Monday after Whit-week, when employment is usually at a low level owing to extensions of holiday stoppages. The decline in employment was entirely accounted for by an increase in the numbers temporarily stopped. Most of this increase occurred in the textile and boot and shoe industries, and to a large extent was due to the extension of holiday suspensions. There was also an increase in the numbers temporarily stopped in general and marine engineering, in iron and steel (except pig iron), tinplate, vehicle and metal goods manufacture, in the pottery industry and in certain of the clothing trades. The numbers unemployed also increased in ship-building and ship repairing and in dock and harbour service. On the other hand there was some improvement in coal mining, in the building and distributive trades, and in hotel and boarding house service.

The heaviest increase in the numbers of insured workpeople temporarily stopped occurred in the North-Western division, but temporary stoppages also accounted for increases in the numbers recorded as unemployed in the Midlands and North-Eastern Divisions. In the South of England employment showed little change and remained moderate. In all other areas it was very bad.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at May 23, 1932 (including those temporarily stopped as well as those wholly unemployed), was 22.1, as compared with 21.4 at April 25, 1932, and with 20.8 at May 18, 1931. The percentage wholly unemployed at May 23, 1932, was 17.1, as compared with 17.3 at April 25, 1932, while the percentage temporarily stopped was 5.0, as compared with 4.1. For males alone, the percentage at May 23, 1932, was 25.3, and for females 13.9; at April 25, 1932, the corresponding percentages were 24.7 and 12.7.

At May 23, 1932, the number of persons on the registers of employment exchanges in Great Britain was 2,001,127 wholly unemployed, 630,664 temporarily stopped and 109,515 normally in casual employment, making a total of 2,741,306. This was 89,125 more than

a month before and 111,335 more than on June 1, 1931. The total included 2,190,478 men, 69,587 boys, 430,828 women and 50,413 girls. Comparison of the numbers on the registers and of the percentages unemployed with the figures of a year before is affected by the results of legislative and administrative changes.

The 2,001,127 wholly unemployed included 713,866 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least thirty contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years, and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 969,997 insured persons with applications for transitional payments; 196,225 insured persons not in receipt of insurance benefit or transitional payments; 121,039 uninsured persons.

In Great Britain and Northern Ireland the total number of persons on the registers of employment exchanges on May 23, 1932, was 2,804,753.

### United States

The Bureau of Labour Statistics of the United States Department of Labour reports the changes in employment and earnings in May, 1932, as compared with April, 1932, based on returns made by 64,844 establishments in 16 major industrial groups, having in May 4,419,506 employees, whose combined earnings in one week were \$90,815,167. The combined totals of these 16 groups show a decrease of 3.2 per cent in employment and 3.9 per cent in earnings.

Increases in both employment and earnings were reported in the quarrying and non-metallic mining and the dyeing and cleaning groups, while increased earnings coupled with small declines in employment were reported in the crude petroleum, power and light, electric railroad and motor bus operation, and wholesale trade groups. Decreases in both employment and earnings were shown in the remaining ten groups. In the groups reporting decreased employment, decreases of 1 per cent or less were shown in crude petroleum, telephone and telegraph, power and light, retail trade, and laundries, while the wholesale trade and electric railroad and motor bus operation groups reported losses of slightly more than 1 per cent. Decreases ranging from 3.1 per cent to 4.5 per cent were reported in the hotel, manufacturing, anthracite, and bituminous coal mining groups. The most

pronounced declines in employment from April to May, ranging from 10.3 per cent to 13.8 per cent, were shown in the building construction, metalliferous mining, and canning and preserving industries.

In a statement in its official publication, the *Monthly Survey of Business*, of June 23, the American Federation of Labor estimated the number of unemployed in the United States at approximately 10,634,000 on that date. This estimate is based on the United States 1930 unemployment census brought up to date by government employment indexes.

In a review of the situation, the A. F. of L. publication states as follows:—"More than one-fifth of all American citizens who normally earn their living are out of work. At the April 1930 census, 48,800,000 persons in the United States depended on gainful work for their living; and 44,900,000 were at work. Since then the number needing work has increased with the normal growth of population, but jobs are fewer. Now (March, 1932), 49,600,000 want work, but only 38,000,000 are at work; (about 1,000,000 are either unable to work or had been unemployed less than one week.)"

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication of manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the

custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance

of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Deepening channel in Scoudouc River leading to Shediac Harbour, N.B. Name of contractor, Philip N. Leger, Mont Carmel, N.B. Date of contract, June 20, 1932. Amount of contract, approximately \$2,840.00. The General Fair Wages Clause was Inserted in the contract.

Dredging Lake Ontario, Port Hope, Ont. Name of contractor, Wm. L. Forrest, Goderich, Ont. Date of contract, June 20, 1932. Amount of contract, approximately \$9,805.00. The General Fair Wages Clause was inserted in the contract.

Dredging harbour, Owen Sound, Ont. Name of contractors, Burke Towing and Salvage Co., Ltd., Midland, Ont. Date of contract, June 17, 1932. Amount of contract, approximately \$7,810.00. The General Fair Wages Clause was inserted in the contract.

Dredging, Sault Ste. Marie, Ont. Name of contractors, McLean Dredging & Construction Co., Sault Ste. Marie, Ont. Date of contract, May 25, 1932. Amount of contract, approximately \$7,700.00. The General Fair Wages Clause was inserted in the contract.

##### *Contracts in Group "B" (Interior Fittings, etc.)*

Installation of interior fittings in the public building, Perth, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, June 9, 1932. Amount of contract, \$2,143.00. The "B" Labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Calgary, Alta. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, June 7, 1932. Amount of contract, \$5,632.00. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building, Toronto, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, June 7, 1932. Amount of contract, \$12,732.00. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Ste. Anne de Bellevue, Que. Name of contractors, The Canadian Office and School Furniture, Ltd., Preston, Ont. Date of contract, June 22, 1932. Amount of contract, \$854.00. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at The Pas, Man. Name of contractors, Western Mfg. Co., Ltd., Regina, Sask. Date of contract, June 24th. Amount of contract, \$2,030.00. The "B" labour conditions were inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in June, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. . . . .	\$ 451 60
Interprovincial Equipment Co., Ottawa, Ont. . . . .	148 80
<i>Making and repairing rubber stamps, dater, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. . . . .	122 47
<i>Making and Supplying Letter Carriers' uniforms</i>

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements, with their schedules of wages and working conditions, that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees, but verbal agreements, are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

MONTREAL, QUEBEC. — CERTAIN BAKERIES (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 115.

Agreement to be in effect from May 1, 1932, to May 1, 1933.

This agreement is the same as that previously in effect and summarized in the *LABOUR GAZETTE*, July, 1931, page 832, with the following exceptions:

Employers no longer pay for the Hebrew holidays or May 1.

Wages per week: first hand \$36, second hand \$33, third hand \$30, helpers \$18.

### Manufacturing: Printing and Publishing

WINNIPEG, MANITOBA. — CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 59.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1929, page 1050, with the following exceptions:

Wages per week for journeymen stereotypers: \$42 (the former wage was \$46). Wages per week for apprentices: \$16 for first year with an increase of \$4 per week each year until \$32 during the fifth year.

All overtime to be paid at time and one-half. Double time rates amounting to not less than one day's straight pay to be paid for all work on statutory or civic holidays.

REGINA, SASK. — PUBLISHERS OF DAILY NEWSPAPERS AND THE REGINA PRINTING PRESSMEN AND ASSISTANTS' UNION No. 75. (INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION).

Agreement to be in effect from April 1, 1932 to May 1, 1933.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July 1930, page 841, with the following exceptions:

Wages per hour for journeymen pressmen: 83 cents (a reduction of 10 cents per hour from the previous rate). Wages on night shift \$3 per week over day scale.

Wages per week for apprentices: first year \$15.30, second year \$18, third year \$21.60, fourth year \$27, fifth year \$30.60.

REGINA, SASK. — CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 657.

Agreement to be in effect from February 19, 1932 to April 30, 1933.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1929, page 804 and July, 1928, page 785, with the following exceptions:

#### Newspaper Offices

Wages for stonemen, admen, make-up-men, proofreaders, bankmen, foremen, machine-operators, machinists and copy preparers: 90 cents per hour for day work. (The previous rate was \$1 per hour.) For night work \$3 per week extra as before. The hours are unchanged at 48 per week for day work and 45 for night work.

#### Job Printing Offices

Wages for stonemen, admen, make-up-men, proofreaders, bankmen, foremen, machine-operators, machinists and copy preparers: 90 cents per hour for day work. (The previous rate was \$1 per hour.) For night work \$3 per week extra as before. The hours are unchanged at 44 per week for day work and 42 for night work.

EDMONTON, ALBERTA. — TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 129.

Agreement to be in effect from February 25, 1932, to May 27, 1933.

This agreement renews the one previously in effect which was summarized in the *LABOUR GAZETTE*, July, 1930, page 842, with the following exception:

Wages per hour: 96 cents for day work and \$1.02 for night work (a reduction of 10 per cent from the previous rate).

Hours are unchanged at 45 per week for both day and night work.

EDMONTON, ALTA. — TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION No. 255.

Agreement to be in effect from February 25, 1932, to May 27, 1933.

This agreement renews the one previously in effect and summarized in the *LABOUR GAZETTE*, December, 1929, page 1413 and August, 1925, page 828, with the following exceptions:

Wages for printing pressmen: 96 cents per hour for day work and \$1.02 for night work (a reduction of 10 per cent from the previous rate).

The hours are unchanged at 45 per week for both day and night work.

EDMONTON AND CALGARY, ALBERTA. — NEWSPAPER PUBLISHERS OF EDMONTON AND CALGARY AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCALS Nos. 604 AND 449.

Agreement to be in effect from February 25, 1932, to May 15, 1933.

This agreement renews the one previously in effect which was summarized in the *LABOUR GAZETTE*, July, 1929, page 804, with the following exception:

Wages per hour for journeymen: 96 cents for day work, \$1.02 for night work and \$1.06 on lobster shifts (a reduction of 10 per cent from the previous rate).

Hours are unchanged at 45 per week for both day and night work.

**VANCOUVER, B.C.—TWO DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 226.**

Agreement to be in effect from March 1, 1932, to February 28, 1933.

This Agreement is similar to the one previously in effect which was summarized in the *LABOUR GAZETTE*, August, 1927, page 889, with the following exceptions:

Wages per hour: 96 cents on day work and \$1.05 on night work (a reduction of 10 per cent from the previous rate). Machinist-operators \$3 per week extra.

Hours are unchanged at 45 per week for both day and night work.

**VANCOUVER, B.C.—CERTAIN BOOK AND JOB OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 226.**

Agreement to be in effect from March 14, 1932, to March 13, 1933, and may be extended from year to year providing wages and hours can be mutually arranged.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, January, 1929, page 92 with the following exceptions:

Wages per week for compositors, stonemen and proofreaders: \$40.50 for day work and \$43.65 for night work; operators and machinists \$42.30 for day work and \$46.26 for night work. (These are reductions of 10 per cent from the previous rates); machinist operators \$3 per week extra as before.

### Construction: Buildings and Structures

**HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 625.**

The agreement which was summarized in the *LABOUR GAZETTE*, March, 1930, page 326, has been renewed with the following change:

Wages for electrical workers are reduced from \$1 to 85 cents per hour.

**ST. JOHN, N.B.—CERTAIN MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 574.**

The terms of the award of the board under the Industrial Disputes Investigation Act which was published in the *LABOUR GAZETTE*, November, 1930, page 1249, is continued in effect by a verbal agreement with certain master plumbers from May 1, 1932, with the following changes:

Wages per hour: 65 cents.

**TORONTO, ONT.—CONTRACTING PLASTERERS' INTERNATIONAL ASSOCIATION AND THE WOOD, WIRE AND METAL LATHERS INTERNATIONAL ASSOCIATION, LOCAL No. 97.**

Agreement to be in effect from June 13, 1932, to April 30, 1933.

Employers are not to advertise for help without first notifying the business agent of the union. Foremen to be union members.

Hours: 8 per day, no work on Saturday, a 40-hour week.

Overtime and work on legal holidays: time and one half. No work on Saturdays until 5 p.m. and then at overtime rates.

Wages per hour: metal lathers on metal furring and tied on work \$1; wood lath and all nailed on work 62½ cents.

Whenever 60 per cent of the local union members are unemployed, the employers and the executive of the local union will endeavour to distribute the work as equitably as possible among the union members.

A joint arbitration board will be formed for settling all disputes.

**TORONTO, ONTARIO.—CUT STONE SECTION OF THE BUILDERS' EXCHANGE AND THE TORONTO LOCAL OF JOURNEYMEN STONECUTTERS' ASSOCIATION OF NORTH AMERICA.**

Agreement to be in effect from May 1, 1932, to April 30, 1933. Either party desiring a change to give two months' notice prior to expiration date.

Only union members to be employed, if available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one half for first two hours; after two hours and all work on Saturday afternoons, double time.

Wages for journeymen stonecutters: \$1 per hour.

One apprentice allowed for every five journeymen, but not more than three apprentices in any one shop. Apprentices will serve four years, starting between the ages of 16 and 20 years inclusive.

Provision is made for arbitration in case of disputes.

**ST. CATHARINES, ONTARIO.—MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 38.**

The agreement which was summarized in the *LABOUR GAZETTE*, December, 1931, page 1357, has been renewed verbally without change to April 30, 1933.

Wages are 90 cents per hour with a 44-hour week.

### CORRECTION

**VANCOUVER, B.C.—GENERAL CONTRACTORS' ASSOCIATION AND THE BRIDGE, STRUCTURAL, ORNAMENTAL, REINFORCED IRON WORKERS, PILE DRIVERS' AND RIGGERS' UNION OF CANADA, LOCAL No. 1.**

The schedule of wages and working conditions for pile drivers and bridgemen given in the last issue of the *LABOUR GAZETTE*, page 718, applies only to the above-named union and not to the United Brotherhood of Carpenters and Joiners, Local 2404, as there stated. Negotiations between the latter union and the Contractors' Association are reported to have not yet been completed.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$6.79 for June, as compared with \$6.90 for May; \$8.16 for June, 1931; \$11.10 for June 1930; \$10.92 for June, 1929; \$10.18 for June, 1932; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. The decrease was mainly due to lower prices for milk, butter, cheese, bread, mutton, pork, bacon, lard and potatoes. Including the cost of fuel and rent with that of feeds the total budget averaged \$16.20 at the beginning of June, as compared with \$16.45 for May; \$18.36 for June, 1931; \$21.44 for June, 1930; \$21.18 for June, 1929; \$20.58 for June, 1922; \$26.92 for July, 1920 (the peak); and \$14.27 for June, 1914. Fuel averaged slightly lower, due to declines in the prices of anthracite coal and wood. Decreases in rent occurred in several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again lower at 66.6 for June as compared with 67.7 for May; 72.2 for June, 1931; 87.7 for June, 1930; 93.4 for June, 1929; 164.3 for May, 1920 (the peak); and 64.4 for June, 1914. One hundred and twenty prices quotations were lower, forty-three were higher and three hundred and thirty-nine were unchanged.

In the classification according to chief component materials six of the eight main groups were lower and two were higher. The Iron and its Products group and the Non-Metallic Minerals group advanced slightly, the former due to higher prices for rolling mill products and hardware and the latter due mainly to higher prices for plaster and sulphur. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for grains, flour and vegetable oils; the Animals and their Products group, because of decreases in the prices of calves, lambs, leather, salmon, cured meats and butter, which more than offset higher prices for eggs, steers and hogs; the Fibres, Textiles and Textile Products group, because of lower prices for raw jute, raw cotton and raw wool; the Wood, Wood Products and Paper group, due to declines in certain lines of lumber; the Non-

Ferrous Metals and their Products group, because of declines in the prices of copper, lead, zinc and tin; and the Chemicals and Allied Products group, due to decreases in the prices of paint materials, tanning and dyeing materials and certain drugs, which more than offset higher prices for certain organic chemicals.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of decreases in the prices of flour, oatmeal, rolled oats, cured meats, butter and cheese, which more than offset higher prices for coffee, fresh meats and eggs, and the latter due to lower quotations for wheat, oats, barley, calves, lambs, raw wool, lumber and copper, which more than offset higher prices for corn, steers, hogs, plaster, sulphur and organic chemicals.

In the grouping according to origin lower prices for wheat, oats, rye, calves, lambs, lumber and copper caused a decline in the group of raw and partly manufactured goods, while fully and chiefly manufactured goods were also lower, due mainly to decreases in the prices of flour, oatmeal, rolled oats, butter, cheese and leather. Domestic farm products, articles of marine origin and articles of forest origin were lower. Articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods

(Continued on page 828)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family
